

# PowerFlex 700S High Performance AC Drive - Phase II Control

Firmware Versions 1.xxx...5.002

## Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

**WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

**ATTENTION:** Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence.

---

### IMPORTANT

Identifies information that is critical for successful application and understanding of the product.

---

Labels may also be on or inside the equipment to provide specific precautions.

**SHOCK HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present.

**BURN HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures.

**ARC FLASH HAZARD:** Labels may be on or inside the equipment, for example, a motor control center, to alert people to potential Arc Flash. Arc Flash will cause severe injury or death. Wear proper Personal Protective Equipment (PPE). Follow ALL Regulatory requirements for safe work practices and for Personal Protective Equipment (PPE).

---

This manual contains new and updated information.

### New and Updated Information

This table contains the changes made to this revision.

Topic	Page
Updated the list of Additional Resources.	<a href="#">9</a>
Updated the description of parameter 338 [Mtr I2T Spd Min] to include setting it to the minimum value for the motor overload trip to vary in time at low speeds.	<a href="#">69</a>
Updated the description of fault 15 "Inv OTemp Trip" to include a possible junction temperature fault condition.	<a href="#">146</a>
Removed the "Input Voltage Range/Tolerance" topic from Chapter B Application Notes.	<a href="#">161</a>
Added a note to the "Inverter Overload IT" block diagram for parameter 338 [Mtr I2T Spd Min].	<a href="#">197</a>

Changes to this manual for previous revisions are included in Chapter F History of Changes on page [209](#).

## Purpose of This Manual

The purpose of this manual is to provide you with the information needed to start-up, program and troubleshoot PowerFlex 700S Phase II Adjustable Frequency AC drives.

Topic	Page
Who Should Use This Manual	<a href="#">9</a>
Additional Resources	<a href="#">9</a>
General Precautions	<a href="#">11</a>

## Who Should Use This Manual

This manual is intended for qualified personnel. You must be able to program and operate adjustable frequency AC drives. In addition, you must have an understanding of the parameter settings and functions of this drive and programmable controllers for PowerFlex 700S Phase II drives with DriveLogix.

## Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Resource	Description
PowerFlex 700S Phase II Drive, Frames 1...6 Installation Instructions, publication <a href="#">20D-IN024</a>	Provides you with the information needed to install and wire PowerFlex 700S Phase II frame 1...6 drives.
PowerFlex 700H and 700S Drives, Frames 9...14 Installation Instructions, publication <a href="#">PFLEX-IN006</a>	Provides you with the information needed to install and wire PowerFlex 700S Phase II frame 9...14 drives.
PowerFlex 700S Phase II Reference Manual, publication <a href="#">PFLEX-RM003</a>	Provides detailed explanations and examples of PowerFlex 700S Phase II drive control functions and application programming.
Stegmann Feedback Option for PowerFlex 700S Drives Installation Instructions, publication <a href="#">20D-IN001</a>	Provides instructions for installing the Stegmann feedback option board for PowerFlex 700S drives.
Resolver Feedback Option for PowerFlex 700S Drives Installation Instructions, publication <a href="#">20D-IN002</a>	Provides instructions for installing the resolver feedback option board for PowerFlex 700S drives.
Multi-Device Interface for PowerFlex 700S Drives Installation Instructions, publication <a href="#">20D-IN004</a>	Provides instructions for installing the multi-device interface option board for PowerFlex 700S drives.
Second Encoder Option for PowerFlex 700S Drives with Phase II Control Installation Instructions, publication <a href="#">20D-IN009</a>	Provides instructions for installing the second encoder option board for PowerFlex 700S drives.
SynchLink™ Board for PowerFlex 700S Drives with Phase II Control Installation Instructions, publication <a href="#">20D-IN010</a>	Provides instructions for installing the SynchLink option board for PowerFlex 700S drives.
DriveLogix5730 Controller User Manual, publication <a href="#">20D-UM003</a>	Provides information to help you develop projects for DriveLogix controllers and establish communications with PowerFlex 700S Phase II drives.
Logix5000 Controllers Common Procedures Programming Manual, publication <a href="#">1756-PM001</a>	This publication links to a collection of programming manuals that describe how you can use procedures that are common to all Logix5000 controller projects.
Logix5000 Controllers General Instructions Reference Manual, publication <a href="#">1756-RM003</a>	Provides a programmer with details about each available instruction for a Logix-based controller.
Logix5000 Controllers Process Control and Drives Instructions Reference Manual, publication <a href="#">1756-RM006</a>	Provides a programmer with details about each available instruction for a Logix-based controller.

Resource	Description
SynchLink System Design Guide, publication <a href="#">1756-TD008</a>	Provides a detailed description of SynchLink and the products that operate on it, including: <ul style="list-style-type: none"> <li>• ControlLogix SynchLink module (1756-SYNCH)</li> <li>• ControlLogix Drive modules (1756-DMxxx Series)</li> <li>• PowerFlex 700S drives</li> </ul>
Wiring and Grounding for Pulse Width Modulated (PWM) AC Drives, publication <a href="#">DRIVES-IN001</a>	Provides basic information needed to properly wire and ground Pulse Width Modulated (PWM) AC drives.
Safety Guidelines for the Application, Installation and Maintenance of Solid State Control, publication <a href="#">SGI-1.1</a>	Provides general guidelines for the application, installation, and maintenance of solid-state control in the form of individual devices or packaged assemblies incorporating solid state components.
Industrial Automation Wiring and Grounding Guidelines, publication <a href="#">1770-4.1</a>	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, <a href="http://www.ab.com">http://www.ab.com</a>	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at <http://www.rockwellautomation.com/literature/>. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

## General Precautions

## Qualified Personnel

**ATTENTION:** Only qualified personnel familiar with the PowerFlex 700S Drive and associated machinery should plan or implement the installation, start-up and subsequent maintenance of the system. Failure to comply may result in personal injury and/or equipment damage.

## Personal Safety

**ATTENTION:** To avoid an electric shock hazard, verify that the voltage on the bus capacitors has discharged before performing any work on the drive. Measure the DC bus voltage at the Power Terminal Block by measuring between the +DC and –DC terminals, between the +DC terminal and the chassis, and between the –DC terminal and the chassis. The voltage must be zero for all three measurements.

**ATTENTION:** Hazard of personal injury or equipment damage exists when using bipolar input sources. Noise and drift in sensitive input circuits can cause unpredictable changes in motor speed and direction. Use speed command parameters to help reduce input source sensitivity.

**ATTENTION:** Risk of injury or equipment damage exists. DPI or SCANport host products must not be directly connected together via 1202 cables. Unpredictable behavior can result if two or more devices are connected in this manner.

**ATTENTION:** Risk of injury or equipment damage exists. Parameters 365 [Fdbk LsCnfg Pri]...394 [VoltFdbkLossCnfg] let you determine the action of the drive in response to operating anomalies. Precautions should be taken to ensure that the settings of the parameters do not create hazards of injury or equipment damage.

**ATTENTION:** Risk of injury or equipment damage exists. Parameters 383 [SL CommLoss Data]...392 [NetLoss DPI Cnfg] let you determine the action of the drive if communications are disrupted. You can set the parameters so that the drive continues to run. Precautions should be taken to ensure that the settings of the parameters do not create hazards of injury or equipment damage.

## Product Safety

---

**ATTENTION:** An incorrectly applied or installed drive can result in component damage or a reduction in product life. Wiring or application errors such as under sizing the motor, incorrect or inadequate AC supply, or excessive surrounding air temperatures may result in malfunction of the system.

**ATTENTION:** This drive contains ESD (Electrostatic Discharge) sensitive parts and assemblies. Static control precautions are required when installing, testing, servicing or repairing drive assemblies. Component damage may result if ESD control procedures are not followed. If you are not familiar with static control procedures, reference Guarding Against Electrostatic Damage, publication 8000-4.5.2 or any other applicable ESD protection handbook.

**ATTENTION:** A contactor or other device that routinely disconnects and reapplies the AC line to the drive to start and stop the motor can cause drive hardware damage. The drive is designed to use control input signals that will start and stop the motor. If an input device is used, operation must not exceed one cycle per minute or drive damage will occur.

---

## Class 1 LED Product

---

**ATTENTION:** Hazard of permanent eye damage exists when using optical transmission equipment. This product emits intense light and invisible radiation. Do not look into module ports or fiber optic cable connectors.

---

## Drive Start-Up

This chapter provides the information necessary to start up the PowerFlex 700S Phase II drive.

Topic	Page
Drive Start-Up Checklist	Below
Prepare for Initial Drive Start-Up	<a href="#">14</a>
Start Up the Drive	<a href="#">15</a>

### Drive Start-Up Checklist

- ❑ A **Human Interface Module (HIM)** is **required** to complete this Start-Up procedure, which uses the **Assisted Start** routine. The Assisted Start routine prompts you for information that is needed to start up a drive for most applications, such as line and motor data, commonly adjusted parameters and I/O settings. The Assisted Start routine also performs autotuning procedures. See [Figure 1](#) on page [16](#) for a flow chart of the Assisted Start routine.
- ❑ A **HIM must be installed** in Drive Peripheral Interface (DPI) Port 1 or 2. If a HIM is not installed, a remote device should be used to start-up the drive. Refer to Human Interface Module Overview on page [153](#) for more information on using the PowerFlex 7-Class (DPI) HIM. Refer to the *Enhanced PowerFlex 7-Class HIM User Manual*, publication 20HIM-UM001, for information on using the Enhanced HIM (if installed).
- ❑ **3-wire control** is the default (and recommended) mode of use for the Assisted Start routine. In this case, the drive will start when the HIM “Start” key is pressed and stop when the HIM “Stop” key is pressed. If the drive is configured for 2-wire control, the HIM installed on the drive will also act as a 2-wire device. In 2-wire mode, the drive will start when the HIM “Start” key is pressed and stop when the HIM “Start” key is released.
- ❑ **Analog and Digital I/O** parameter values may be modified when using the Assisted Start routine.

#### IMPORTANT

If you have a DriveLogix™ application, you must first connect the battery before starting this section. Refer to the DriveLogix™ 5730 Controller for PowerFlex 700S Drives with Phase II Control, publication [20D-UM003](#), for details.

## Prepare for Initial Drive Start-Up

**ATTENTION:** Power must be applied to the drive to perform the following start-up procedure. Some of the voltages present are at incoming line potential. To avoid electric shock hazard or damage to equipment, only qualified service personnel should perform the following procedure. Thoroughly read and understand the procedure before beginning.

1. Confirm that all inputs are connected to the correct terminals and are secure.
2. Verify that AC line power at the disconnect device is within the rated value of the drive.
3. Verify that control power voltage is correct.
4. Apply AC power and control voltages to the drive. The drive and HIM will power up.

**IMPORTANT** When power is first applied, the HIM may require approximately five seconds until commands are recognized (including the Stop key).

- If the STS (status) LED is NOT flashing green, refer to Status Indicators on page [f139](#) or more information.
  - If any digital input is configured to “Stop - CF” (CF=Clear Faults) or “Enable”, verify that signals are present or the drive will not start. See [Table 1](#) on page [17](#) for other causes of a start inhibit.
5. When prompted on the HIM, select a display language and press Enter (  ).

The **PowerFlex 700S Start-Up** screen displays for drives that have not been previously configured.

**TIP** If the Assisted Start routine has already been accessed and started, you can return to and continue with the Start-Up routine. See Access the Start-Up Routine on page [155](#) for more information.

## Start Up the Drive

6. Press Enter (  ) on the HIM.

The Assisted Start routine will prompt you for the required information needed to start-up the drive and complete the autotuning procedures. See [Figure 1](#) on page [16](#) for a flow chart of the Assisted Start routine.

**Note:** When starting up some high impedance motor applications, the “Power Circuit Test” may fail. If this test fails, the HIM displays the following fault description text:

- Power Circuit Diagnostic Test Detected Error: XX\_XX no gate, open circuit, bad I sensor, press Enter.

If this failure occurs, do the following:

- Verify the connections between the motor and the drive; make sure that a disconnect device or contactor is not interfering with the signal.
  - Press Enter to continue and perform the Direction Test. If the Direction Test is successful, continue with the Start-Up routine - ignoring the failure. If the Direction Test fails, check for an open connection or bad current sensor.
7. When the Assisted Start routine is finished and **Done/Exit** displays on the HIM, press Enter (  ) to save any changed and/or updated data.

---

**IMPORTANT** Always exit the Assisted Start routine before cycling power to the drive.

---

Figure 1 - PowerFlex 700S Assisted Start Routine Flow Chart

Table 1 - Common Causes of a Start Inhibit

Examine Parameter 156 [Start Inhibits]			
Bit	Description		Action
1	No power is present at the Enable Terminal; TB2-16		Apply the enable
2, 3, 4	A stop command is being issued		Close all stop inputs
5	Power loss event is in progress, indicating a loss of the AC input voltage		Restore AC power
6	Data supplied by the power structure EEprom is invalid or corrupt		Cycle the power - if problem persists, replace the power structure
7	Flash Update in Progress		Complete Flash Procedures
8	Drive is expecting a Start Edge and is receiving a continuous signal		Open all start buttons and remove all start commands
9	Drive is expecting a Jog Edge and is receiving a continuous signal		Open all jog buttons and remove all jog commands
10	A conflict exists between the Encoder PPR programming (Par 232 or 242) and the encoder configuration for edge counts (Par 233, bits 4 & 5)		Verify encoder data and reprogram
11	The drive cannot precharge because a precharge input is programmed and no signal is present		Reprogram the input or close the precharge control contact
12	Digital Configuration	Start input configured but stop not configured	Program Par 825 . . . 830 to include a stop button, rewire the drive
		Run input configured but control options do not match	Program Par 153, Bit 8 to “0” (2 wire control)
		Start input configured but control options do not match	Program Par 153, Bit 8 to “1” (3 wire control)
		Multiple inputs configured as Start or Run	Reprogram Par 825 . . . 830 so multiple starts, multiple runs or any combination do not exist
		Multiple inputs configured as Jog1	Reprogram Par 825 . . . 830 so only (1) is set to Jog1
		Multiple inputs configured as Jog2	Reprogram Par 825 . . . 830 so only (1) is set to Jog2
		Multiple inputs configured as Fwd/Rev	Reprogram Par 825 . . . 830 so only (1) is set to Fwd/Rev
14	Invalid Feedback Device for Permanent Magnet Motor Control		Set Par 222 to Value 5 (FB Opt Port0)

## **Notes:**

## Programming and Parameters

This chapter provides a complete listing of the PowerFlex 700S Phase II drive parameters. The parameters can be programmed (viewed/edited) using a Human Interface Module (HIM). Refer to Human Interface Module Overview on page [153](#) for information on using the HIM to view and edit parameters. As an alternative, programming can also be performed using DriveTools™ software and a personal computer.

Topic	Page
About Parameters	<a href="#">19</a>
How Parameters are Organized	<a href="#">21</a>
Parameter Data in Linear List Format	<a href="#">33</a>
Parameter Cross Reference By Name	<a href="#">131</a>

### About Parameters

To configure a drive module to operate in a specific way, certain drive parameters may have to be configured appropriately. Three types of parameters exist:

- **ENUM Parameters**

These parameters allow a selection from two or more items. The LCD HIM will display a text message for each item.

- **Bit Parameters**

These parameters have individual bits associated with features or conditions. If the bit is 0, the feature is off or the condition is false. If the bit is 1, the feature is on or the condition is true.

- **Numeric Parameters**

These parameters have a single numeric value, for example, “0.1 Volts”.

The example tables on the following page illustrate how each parameter type is presented in this manual.

Table 2 - Table Explanation

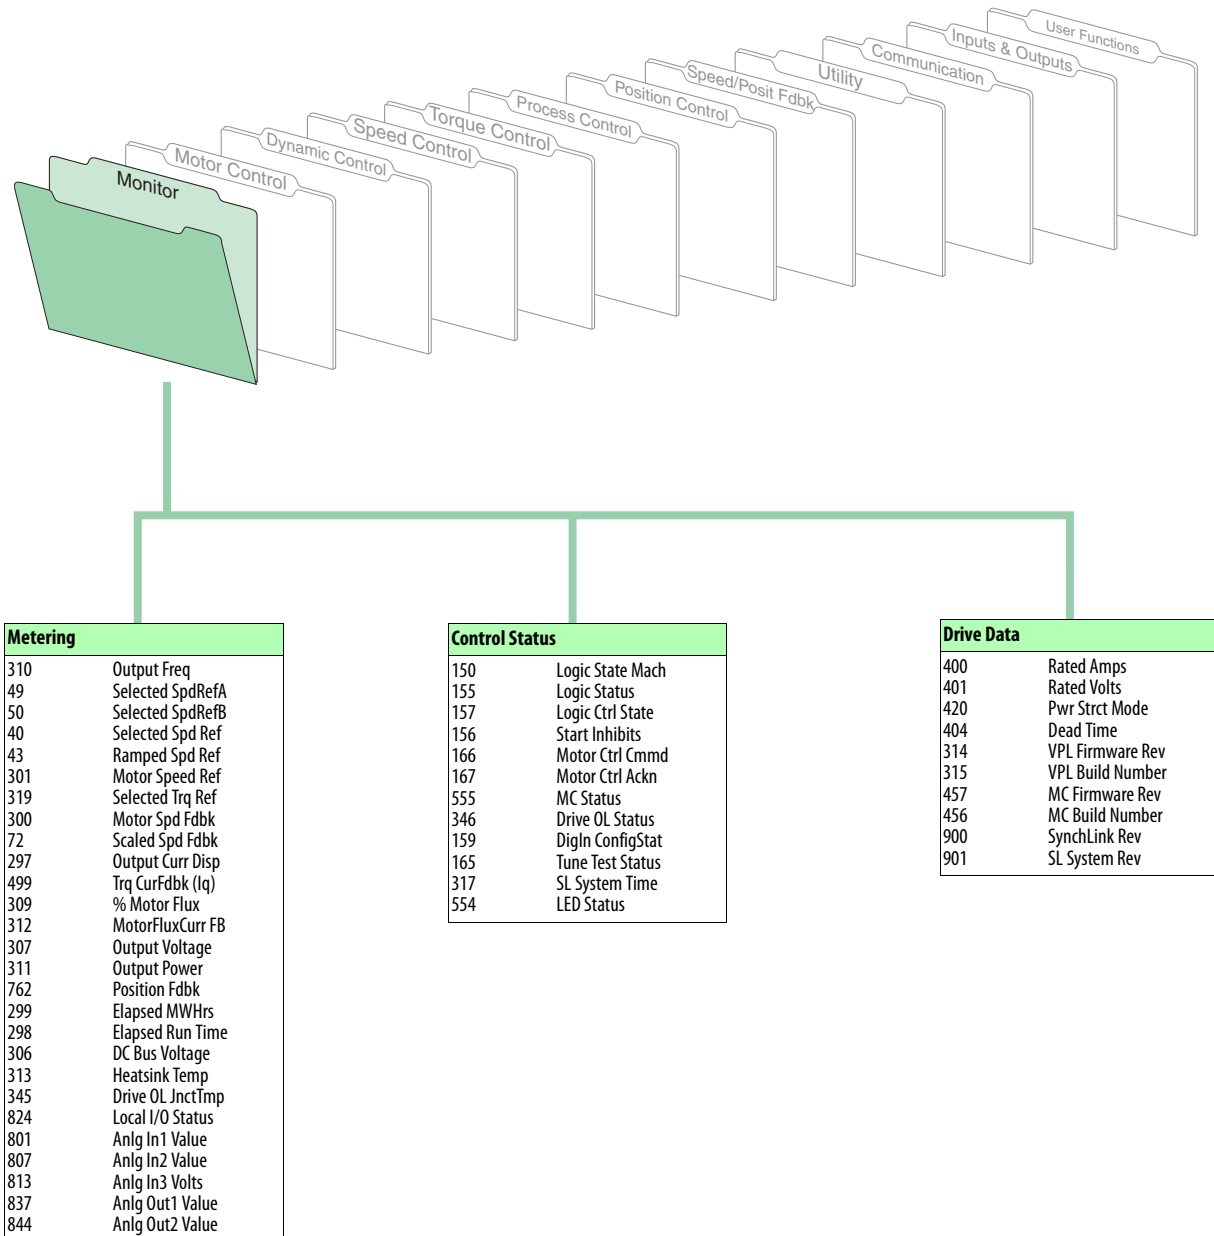

1	2	3														
No.	Name Description	Values	Linkable	Read-Write	Data Type											
4	<b>Motor NP RPM</b> Set to the motor nameplate rated rpm.	Default: Calculated Min/Max: 1/30000 Units: rpm Scale: Par 4 [Motor NP RPM] = 1.0 P.U.		RW	16-bit Integer											
110	<b>Speed/TorqueMode</b> Selects the source for the drive torque reference.	Default: 1 = "Speed Reg" Options: 0 = "Zero Torque" 4 = "Max Spd/Torq" 1 = "Speed Reg" 5 = "Sum Spd/Torq" 2 = "Torque Ref" 6 = "AbsMn Spd/Tq" 3 = "Min Spd/Torq"														
151	<b>Logic Command</b> The controller-drive interface (as defined by the Controller Communication Format) sets bits to enable and disable various functions and algorithms. Bits that are changed here are reflected in <a href="#">Par 152</a> [Applied LogicCmd]. Note: Bits 4 through 9 in Logic Command are NOT recalled from Control EEPROM. They will be cleared upon drive powerup or following an EEPROM recall operation.															
Options																
	PI Trim Rst	PI Trim Hold	Position En	PI Trim En	Fric Comp	Inertia Comp	Ext Filt/Alm	Reserved	Reserved	SReg IntgRst	SReg IntgHld	SpdRamp Hold	Time Axis En	TachLoss Rst	Spd S Crv En	SpdRamp Dsbl
Default	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
		0 = False 1 = True														

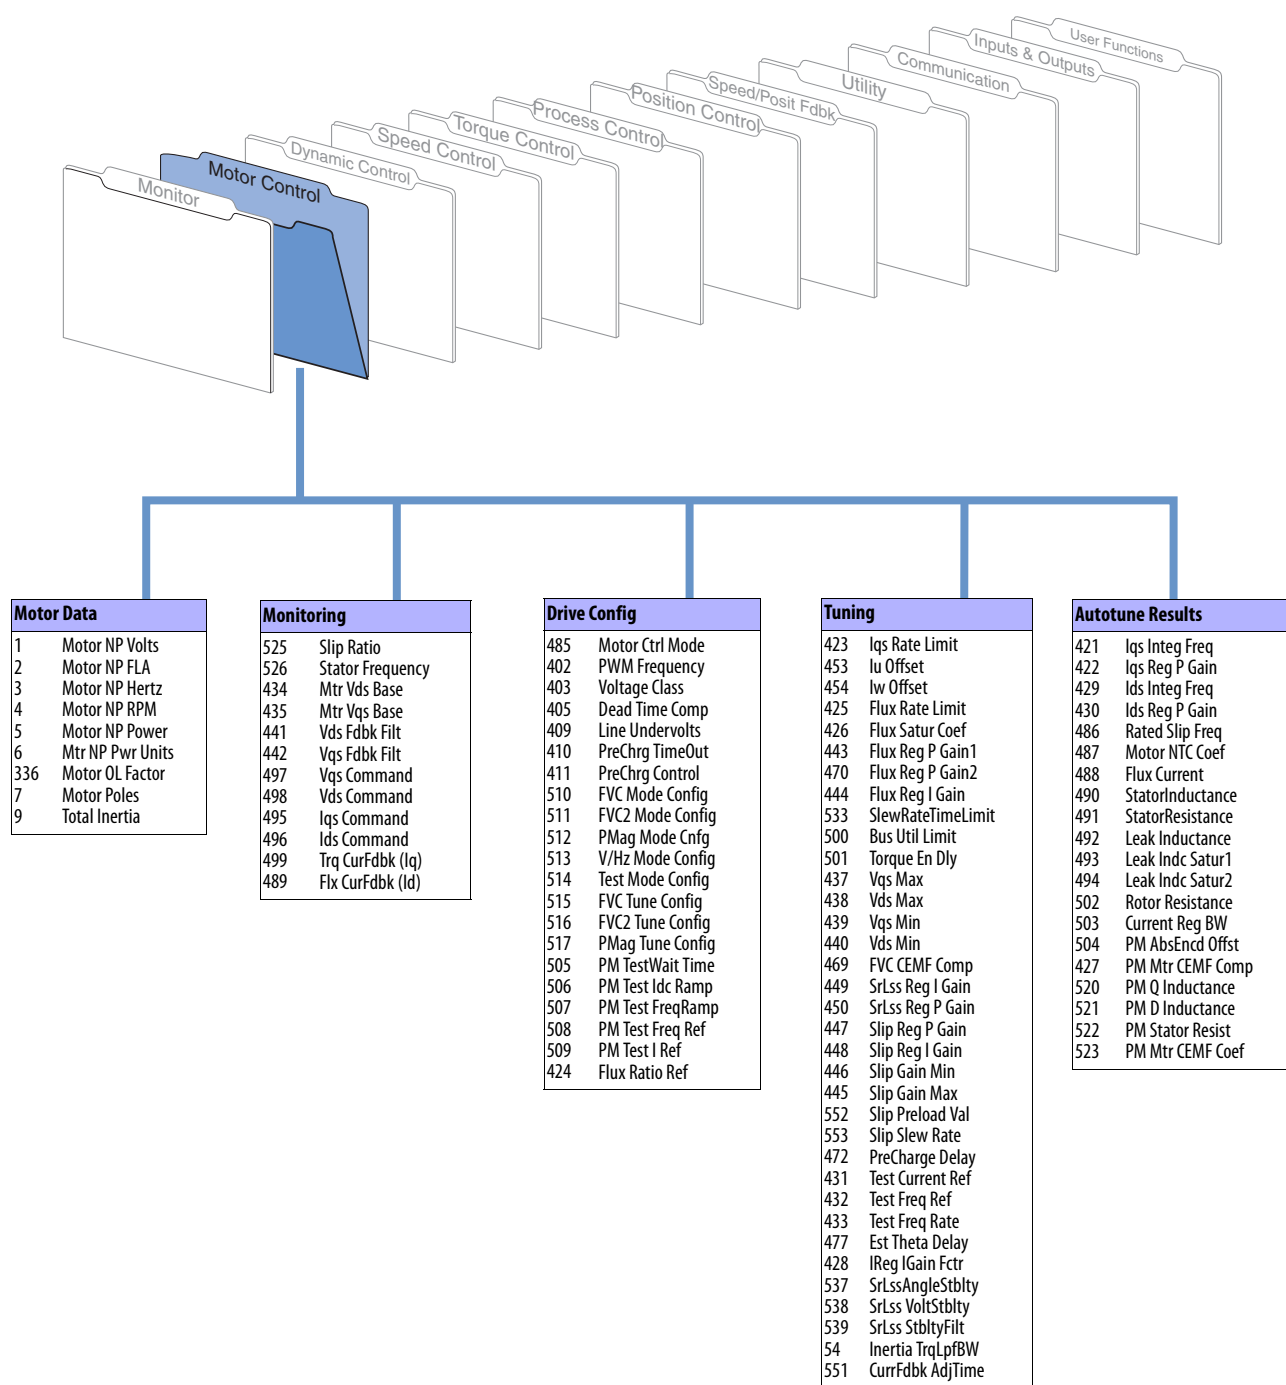

Column(s)	Explanation						
1	<b>No.</b> - Parameter Number   = Parameter value cannot be changed until the drive is stopped.  = Parameter is displayed on the HIM only when Par 196 [ParamAccessLvl] is set to 1 "Advanced".						
2	<b>Name</b> - Parameter name as it appears in the DriveExecutive software. <b>Description</b> - Brief description of parameter function.						
3	<b>Values</b> - Define the various operating characteristics of the parameter. There are 3 types of Values: <table border="1"> <tr> <td>Numeric</td><td>           Default: Lists the value assigned at the factory.            Min/Max: Displays lowest possible setting/Displays highest possible setting.            Units: Unit of measure and resolution as shown on the LCD HIM.            Scale: Value sent from Controller or Comm Device = Drive Parameter Value x Comm Scale  <b>Important:</b> Analog inputs can be set for current or voltage with parameter 821 [Analog I/O Units].         </td></tr> <tr> <td>ENUM</td><td>           Default: Lists the value assigned at the factory.            Options: Displays the selections available.         </td></tr> <tr> <td>Bit</td><td>           Options: Displays the bit selections available.            Default: Lists the value assigned at the factory.            Bit: Bit number.         </td></tr> </table> <b>Linkable</b> - "Y" indicates that the parameter is linkable. <b>Read-Write</b> - Identifies if the parameter is read-write or read-only. RW = Read-Write RO = Read Only <b>Data Type</b> - Identifies the parameter data type (i.e. integer, floating point, boolean).	Numeric	Default: Lists the value assigned at the factory. Min/Max: Displays lowest possible setting/Displays highest possible setting. Units: Unit of measure and resolution as shown on the LCD HIM. Scale: Value sent from Controller or Comm Device = Drive Parameter Value x Comm Scale <b>Important:</b> Analog inputs can be set for current or voltage with parameter 821 [Analog I/O Units].	ENUM	Default: Lists the value assigned at the factory. Options: Displays the selections available.	Bit	Options: Displays the bit selections available. Default: Lists the value assigned at the factory. Bit: Bit number.
Numeric	Default: Lists the value assigned at the factory. Min/Max: Displays lowest possible setting/Displays highest possible setting. Units: Unit of measure and resolution as shown on the LCD HIM. Scale: Value sent from Controller or Comm Device = Drive Parameter Value x Comm Scale <b>Important:</b> Analog inputs can be set for current or voltage with parameter 821 [Analog I/O Units].						
ENUM	Default: Lists the value assigned at the factory. Options: Displays the selections available.						
Bit	Options: Displays the bit selections available. Default: Lists the value assigned at the factory. Bit: Bit number.						

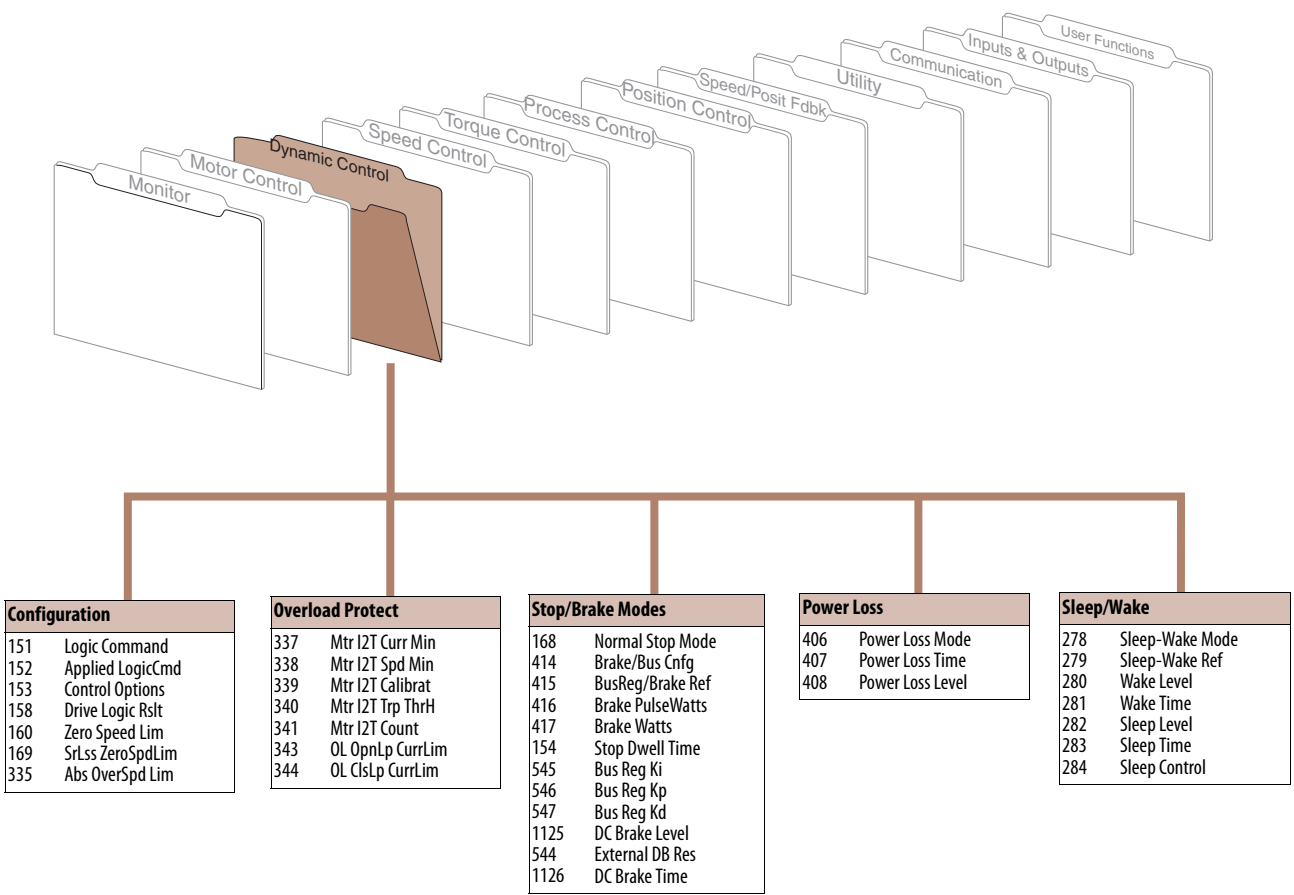

## How Parameters are Organized

DriveExecutive programming software displays parameters in “Linear List” or “File - Group - Parameter” format. Viewing the parameters in “File - Group - Parameter” format simplifies programming by grouping parameters that are used for similar functions. There are twelve files. Each file is divided into multiple groups of parameters. Each illustration below contains a list of the Parameters contained in each Group for each File.

**Note:** The Position Control function is disabled by default. To enable the Position Control function, set Par 147 bit 16 to "1" enable.

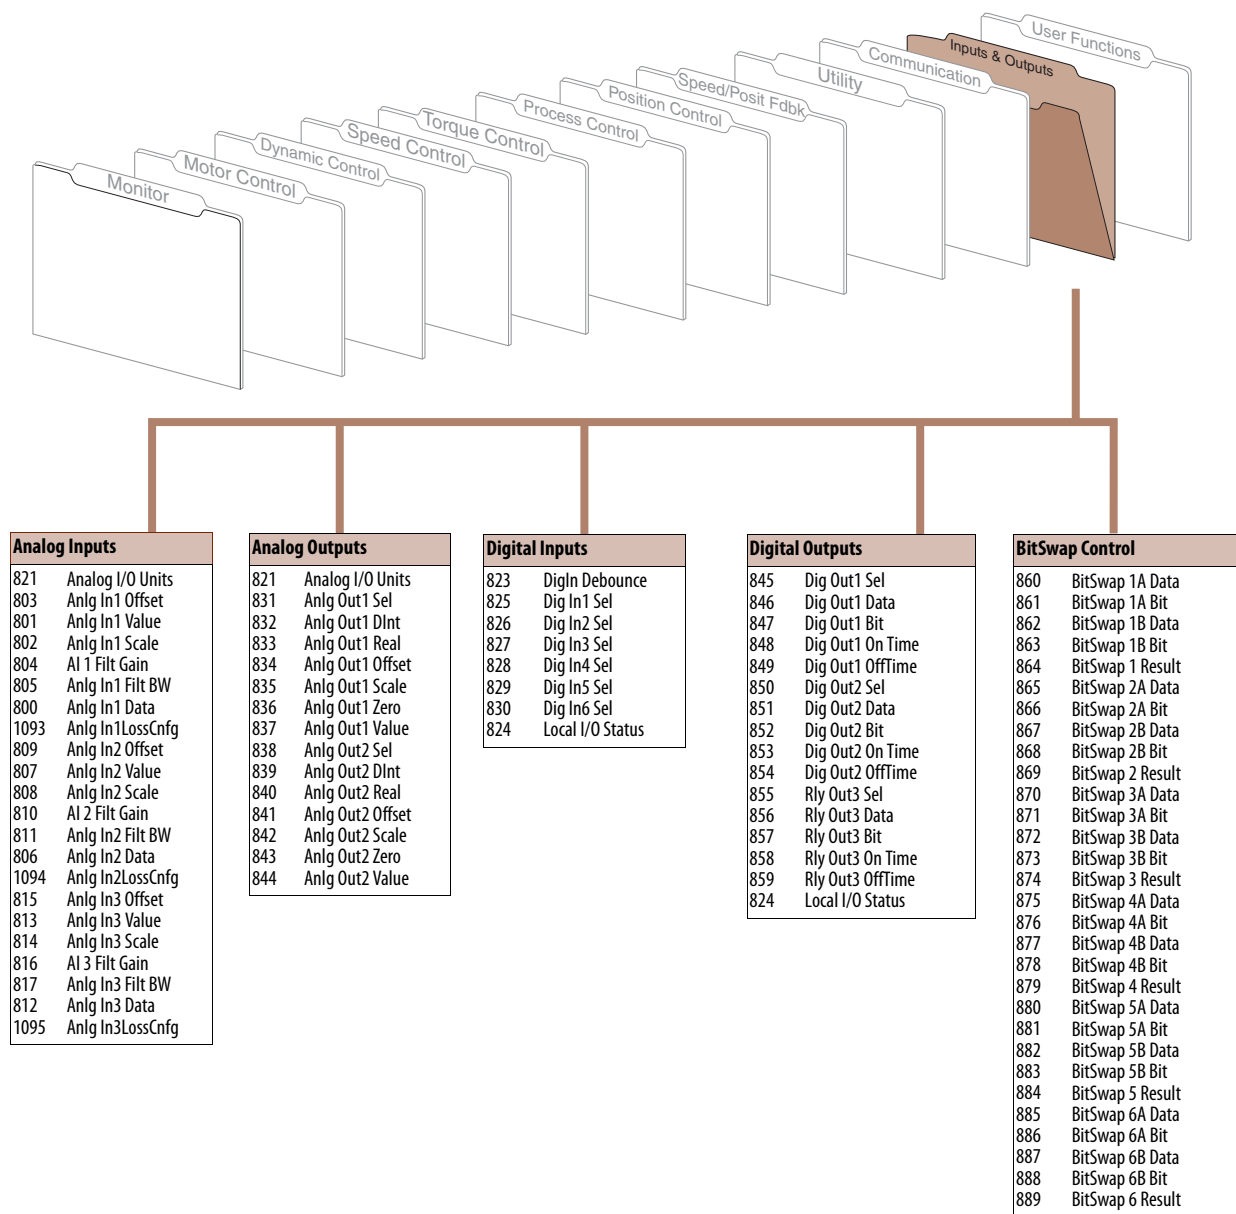

\*Note: This parameter is used by PowerFlex 700L drives only.

<sup>1</sup> The calculation is based on the drive frame size and input voltage.

## Parameter Data in Linear List Format

No.	Name Description	Values	Linkable	Read-Write	Data Type
1	 <b>Motor NP Volts</b> Set to the motor nameplate rated volts.	Default: Calculated <sup>(1)</sup> Min/Max: 75/705 Units: V		RW	16-bit Integer
2	 <b>Motor NP FLA</b> Set to the motor nameplate rated full load amps. Range limited by three-second inverter rating.	Default: Calculated <sup>(1)</sup> Min/Max: Calculated/Calculated Units: A		RW	Real
3	 <b>Motor NP Hertz</b> Set to the motor nameplate rated frequency.	Default: Calculated <sup>(1)</sup> Min/Max: 2.0000/500.0000 Units: Hz		RW	Real
4	 <b>Motor NP RPM</b> Set to the motor nameplate rated rpm.	Default: Calculated <sup>(1)</sup> Min/Max: 1/30000 Units: rpm		RW	16-bit Integer
5	 <b>Motor NP Power</b> Set to the motor nameplate rated power. Note: The unit of measure for this parameter was changed from kW to Hp for firmware version 2.003.	Default: Calculated <sup>(1)</sup> Min/Max: 0.2500/3500.0000 Units: Hp		RW	32-bit Integer
6	 <b>Mtr NP Pwr Units</b> The power units shown on the motor nameplate.	Default: 0 = "Hp" Options: 0 = "Hp" 1 = "kW"			
7	 <b>Motor Poles</b> Set the number of motor poles indicated on the motor nameplate or manufacturer's motor data sheet. Only even numbers of poles are allowed. Calculation: (120 x NP Hz) / NP rpm = Poles [round down] Note: The maximum value was changed from 60 to 128 for firmware version 4.002.	Default: 4 Min/Max: 2/128 Units: Pole		RW	16-bit Integer
9	<b>Total Inertia</b> Time, in seconds, for a motor coupled to a load to accelerate from zero to base speed, at rated motor torque. Calculated during auto-tune.	Default: 2.0000 Min/Max: 0.0100/655.0000 Units: s	Y	RW	Real
10	<b>Speed Ref 1</b> Sets the speed reference that the drive should use when selected by <a href="#">Par 27</a> [Speed Ref A Sel] or <a href="#">Par 28</a> [Speed Ref B Sel]. A value of 1.0 represents base speed of the motor.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
11	<b>Spd Ref1 Divide</b> <a href="#">Par 10</a> [Speed Ref 1] is divided by this number. This number can be used to scale the value of <a href="#">Par 10</a> [Speed Ref 1].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
12	<b>Speed Ref 2</b> Sets the speed reference that the drive should use when selected by <a href="#">Par 27</a> [Speed Ref A Sel] or <a href="#">Par 28</a> [Speed Ref B Sel]. A value of 1.0 represents base speed of the motor.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
13	<b>Spd Ref2 Multi</b> <a href="#">Par 12</a> [Speed Ref 2] is multiplied by this number. This number can be used to scale the value of <a href="#">Par 12</a> [Speed Ref 2].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
14 through 20	<b>Preset Speed 1 through 7</b> Provides an internal fixed speed command value. The preset speeds may be selected with <a href="#">Par 27</a> [Speed Ref A Sel] or <a href="#">Par 28</a> [Speed Ref B Sel].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
21	<b>Speed Trim 1</b> Provides an additive trim value to <a href="#">Par 38</a> [Speed Ref Scale].	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
22	<b>Speed Trim 2</b> Provides an additive speed trim value to <a href="#">Par 47</a> [SpdRef + SpdTrm1] with a Lead/Lag filter. The Position regulator output is linked to this parameter by default. This speed trim value affects the speed reference input to the speed regulator.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
23	<b>Speed Trim 3</b> Provides a scalable speed trim value that will be added to <a href="#">Par 47</a> [SpdRef + SpdTrm1]. <a href="#">Par 24</a> [SpdTrim 3 Scale] scales this value prior to the trim value affecting the speed reference.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
24	<b>SpdTrim 3 Scale</b> <a href="#">Par 23</a> [Speed Trim 3] is multiplied by this number. This number can be used to scale the value of <a href="#">Par 23</a> [Speed Trim 3].	Default: 1.0000 Min/Max: -/+1000.0000	Y	RW	Real
25	<b>STrim2 Filt Gain</b> Sets the lead term for the <a href="#">Par 22</a> [Speed Trim 2] filter. Values greater than 1 will result in a lead function and value less than 1 will result in a lag function. A value of 1 will disable the filter.	Default: 1.0000 Min/Max: -/+15.0000	Y	RW	Real

(1) The calculation is based on the drive frame size and input voltage.

No.	Name Description	Values	Linkable	Read-Write	Data Type
26	<b>SpdTrim2 Filt BW</b> Sets the frequency for the Speed Trim 2 filter.	Default: 200.0000 Min/Max: 0.0000/1000.0000 Units: rad/s	Y	RW	Real
27 28	<b>Speed Ref A Sel</b> <b>Speed Ref B Sel</b> Selects the speed reference source for the drive. The selected speed reference values converge in the final selection of the drives speed reference with <a href="#">Par 152</a> [Applied LogicCmd] and are selected with bits 28, 29, 30. See the Block Diagrams beginning on page <a href="#">173</a> for a description.	Default A: 1 = "Spd Ref 1" Default B: 5 = "Preset Spd 1" Options: 0 = "Zero Speed" 1 = "Speed Ref 1" 2 = "Speed Ref 2" 3 = "Sum Sref 1+2" 4 = "MOP Level" 5 = "Preset Spd 1" 6 = "Preset Spd 2" 7 = "Preset Spd 3" 8 = "Preset Spd 4" 9 = "Preset Spd 5" 10 = "Preset Spd 6" 11 = "Preset Spd 7" 12 = "DPI Port 1" 13 = "DPI Port 2" 14 = "DPI Port 3" 15 = "Reserved" 16 = "DPI Port 5"			
29	<b>Jog Speed 1</b> Sets the speed reference that the drive should use when responding to bit 18 [Jog 1] of <a href="#">Par 152</a> [Applied LogicCmd].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
30	<b>Min Spd Ref Lim</b> Sets the minimum speed reference limit. This value may be negative or positive but not greater than <a href="#">Par 31</a> [Max Spd Ref Lim].	Default: 0.0000 Min/Max: -8.0000/ <a href="#">Par 31</a> [Max Spd Ref Lim] Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real
31	<b>Max Spd Ref Lim</b> Sets the maximum speed reference limit. This value may be negative or positive but not less than <a href="#">Par 30</a> [Min Spd Ref Lim].	Default: 0.0000 Min/Max: <a href="#">Par 30</a> [Min Spd Ref Lim]/8.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real
32	<b>Accel Time 1</b> Sets the rate of acceleration for all speed increases, with time in seconds to base speed. Accel Rate = <a href="#">Par 4</a> [Motor NP RPM] / <a href="#">Par 32</a> [Accel Time]	Default: 10.0000 Min/Max: 0.0100/6553.5000 Units: s	Y	RW	Real
33	<b>Decel Time 1</b> Sets the rate of deceleration for all speed decreases, with time in seconds to base speed. Decel Rate = <a href="#">Par 4</a> [Motor NP RPM] / <a href="#">Par 33</a> [Decel Time]	Default: 10.0000 Min/Max: 0.0100/6553.5000 Units: s	Y	RW	Real
34	<b>S Curve Time</b> Sets the S time (Round In and Round Out ) in seconds. Half of the time specified is added to the beginning and half to the end of the applied ramp. The S time is independent of speed and results in a trapezoidal torque profile. For example: 	Default: 0.5000 Min/Max: 0.0000/4.0000 Units: s	Y	RW	Real
35	<b>SpdRef Filt Gain</b> Sets the lead term for the Speed Reference filter. Values greater than 1 will result in a lead function and values less than 1 will result in a lag function. A value of 1 will disable the filter.	Default: 1.0000 Min/Max: -/+5.0000	Y	RW	Real
36	<b>SpdRef Filt BW</b> Sets the frequency for the Speed Reference filter.	Default: 0.0000 Min/Max: 0.0000/500.0000 Units: rad/s	Y	RW	Real
37	<b>Spd Ref Bypass</b> The speed command after the limit, ramp and s-curve blocks. Link a source directly to this parameter to bypass these blocks.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
38	<b>Speed Ref Scale</b> This parameter is multiplied with the value in <a href="#">Par 37</a> [Spd Ref Bypass].	Default: 1.0000 Min/Max: -/+1000.0000	Y	RW	Real
39	<b>Jog Speed 2</b> Sets the speed reference that the drive should use when responding to bit 23 [Jog 2] of <a href="#">Par 152</a> [Applied LogicCmd].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type
40	<b>Selected Spd Ref</b> Displays the speed command before the speed reference limit block.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
41	<b>Limited Spd Ref</b> Displays the speed command after the limit block, limited by <a href="#">Par 30</a> [Min Spd Ref Lim] and <a href="#">Par 31</a> [Max Spd Ref Lim].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
42	 <b>Jerk</b> Allows you to adjust the amount of S-Curve or "Jerk" applied to the Accel/Decel rate. Note: This parameter was added for firmware version 2.003.	Default: 900 Min/Max: 2/30000		RW	16-bit Integer
43	<b>Ramped Spd Ref</b> Displays the speed command after the ramp block, modified by <a href="#">Par 32</a> [Accel Time 1], <a href="#">Par 33</a> [Decel Time 1] and <a href="#">Par 34</a> [S Curve Time].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
45	<b>Delayed Spd Ref</b> One sample period delayed output of <a href="#">Par 43</a> [Ramped Spd Ref]. Used in some applications to synchronize the speed reference value through SynchLink. This master drive <a href="#">Par 43</a> [Ramped Spd Ref] would then be transmitted to the slave drives over SynchLink.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
46	<b>Scaled Spd Ref</b> Displays the speed command after scaling.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
47	<b>SpdRef + Spd Trm1</b> Displays the final speed command used by the Speed Regulator. It is the sum of <a href="#">Par 46</a> [Scaled Spd Ref] and <a href="#">Par 21</a> [Speed Trim 1].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
48	 <b>Spd Ref Bypass2</b> The speed command after the limit, ramp and s-curve blocks. Link a source directly to this parameter to bypass these blocks.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
49	<b>Selected SpdRefA</b> Used to view the value of Speed Reference A, <a href="#">Par 27</a> [Speed Ref A Sel] from a Human Interface Module (HIM). Note: This parameter is new for firmware version 3.001.	Default: 0.0000 Min/Max: -/+8.0000 Units: rpm		RO	Real
50	<b>Selected SpdRefB</b> Used to view the value of Speed Reference B, <a href="#">Par 28</a> [Speed Ref B Sel] from a HIM. Note: This parameter is new for firmware version 3.001.	Default: 0.0000 Min/Max: -/+8.0000 Units: rpm		RO	Real
53	<b>Drive Ramp Rslt</b> Displays the speed reference value, after the limit function. This is the input to the error calculator and speed regulator. Available for use in peer-to-peer data links (DPI interface). This number is scaled so that rated motor speed will read 32768.	Default: 0 Min/Max: -/+262144		RO	32-bit Integer
54	<b>Inertia TrqLpfBW</b> Sets the bandwidth of the inertia compensation torque output low pass filter. A value of 0.0 will disable the filter. Note: This parameter is new for firmware version 3.001.	Default: 35.0000 Min/Max: 0.0000/2000.0000 Units: rad/s	Y	RW	Real
55	<b>Speed Comp</b> Displays the derivative or change in <a href="#">Par 56</a> [Inertia SpeedRef] on a per second basis. Link this parameter to <a href="#">Par 23</a> [Speed Trim 3] and set <a href="#">Par 24</a> [SpdTrim 3 Scale] to 0.002 to reduce position error in following applications.	Default: 0.0000 Min/Max: -/+2200000000.0000 Units: /s		RO	Real
56	<b>Inertia SpeedRef</b> The speed input of the inertia compensator. Link this parameter to the output of an internal ramp or s-curve block. The inertia compensator generates a torque reference that is proportional to the rate of change of speed input and total inertia.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
57	<b>InertiaAccelGain</b> Sets the acceleration gain for the Inertia Compensation function. A value of 1 produces 100% compensation.	Default: 1.0000 Min/Max: 1.0000/2.0000	Y	RW	Real
58	<b>InertiaDecelGain</b> Sets the deceleration gain for the Inertia Compensation function. A value of 1 produces 100% compensation.	Default: 1.0000 Min/Max: 1.0000/2.0000	Y	RW	Real
59	<b>Inertia Trq Add</b> The torque reference output generated by the inertia compensator. This torque level is modified by <a href="#">Par 57</a> [InertiaAccelGain] and <a href="#">Par 58</a> [InertiaDecelGain]. A value of 1.0 represents rated torque of the motor.	Default: 1.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
60	<b>DeltaSpeedScale</b> Multiplier in the Inertia Compensation function - affects the value of <a href="#">Par 59</a> [Inertia Trq Add]. Use in center winder and unwind applications to compensate for roll diameter build-up.	Default: 1.0000 Min/Max: -/+1000.0000	Y	RW	Real
61	 <b>Virt Encoder EPR</b> Equivalent Edges Per Revolution (EPR) or line count of a virtual encoder. A virtual encoder is a position reference whose input comes from speed reference. It accumulates pulses at the same rate as a real encoder of identical Pulses Per Revolution (PPR). Enter the equivalent PPR. For example, enter 1024 PPR to match an encoder with 1024 EPR.	Default: 4096 Min/Max: 10/67108864 Units: EPR		RW	32-bit Integer

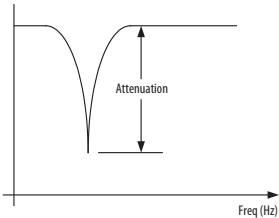

No.	Name Description	Values	Linkable	Read-Write	Data Type
62	<b>Virt Encdr Posit</b> A 32 bit pulse accumulator of the virtual encoder. The accumulated pulse count is equivalent to the hardware accumulator of a real encoder. It accumulates at a rate of 4x the value placed in <a href="#">Par 61</a> [Virt Encoder EPR]. The accumulator starts at zero upon position enable.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
63	<b>Virt Encdr Dlyed</b> One sample period delayed output of <a href="#">Par 62</a> [Virt Encdr Posit]. Used in some applications to phase synchronize position reference through SynchLink. The master is delayed one sample while the downstream drives update their position references – then all drives sample position simultaneously. The downstream drives do not select a delay.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
64	<b>FricComp Spd Ref</b> Supplies a speed input to the Friction Compensation algorithm. This input is normally a speed reference from a motion planner or ramped speed reference. It will trigger a torque feed forward response depending on its value.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: rpm	Y	RW	Real
65	<b>FricComp Setup</b> Enter or write a value to configure the friction compensation algorithm. This is a packed word of 3 digits. Each digit has a possible selection of 10 levels. • The least significant digit sets the speed threshold in intervals of 0.0005 P.U. speed. • The next (middle) digit sets the hysteresis band for the “units” digit in intervals of 0.0005 P.U. velocity. • The most significant digit sets the number of time steps from stick to slip, each step is 0.002 sec. Example: Value = 524 means: 5 time steps between stick and slip, each of 0.002 sec. duration, 2 counts of hysteresis or 0.001 pu_speed (each count is 0.0005 pu_speed), and 4 counts or 0.002 pu_speed is the trigger threshold (each count is 0.0005 pu_speed).	Default: 325 Min/Max: 0/999	Y	RW	16-bit Integer
66	<b>FricComp Stick</b> The torque needed to break away from zero speed. By nature of friction, the break away sticktion will always be greater than the running friction.	Default: 0.1500 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
67	<b>FricComp Slip</b> The torque level to sustain very low speed – once “break away” has been achieved. By nature of friction, viscous friction will always be less than sticktion.	Default: 0.1000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
68	<b>FricComp Rated</b> The torque needed to keep the motor running at base speed and with no process loading. The friction compensation algorithm assumes a linear or viscous component of friction between <a href="#">Par 67</a> [FricComp Slip] and <a href="#">Par 68</a> [FricComp Rated].	Default: 0.2000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
69	<b>FricComp Trq Add</b> The torque reference output of the Friction Compensation function. A value of 1.0 represents rated torque of the motor.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U. Scale: Motor P.U. Torque		RO	Real
71	<b>Filtered SpdFdbk</b> Displays the motor speed feedback value output from the feedback Lead/Lag filter.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
72	<b>Scaled Spd Fdbk</b> Displays the product of the speed feedback and <a href="#">Par 73</a> [Spd Fdbk Scale]. This parameter is for display only.	Default: 0.0000 Min/Max: -/+2200000000.0000 Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
73	<b>Spd Fdbk Scale</b> A user-adjustable scale factor (multiplier) for speed feedback. It is multiplied with speed feedback to produce <a href="#">Par 72</a> [Scaled Spd Fdbk].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
74	 <b>Atune Spd Ref</b> Sets the maximum speed of the motor during the Flux current and inertia tests.	Default: Par 4 x 0.8500 Min/Max: Par 4 x 0.1000/Par 4 x 1.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real
75	 <b>Rev Speed Limit</b> Sets a limit on the speed reference in the negative direction. This value can be entered as a negative value or zero. The maximum value equals <a href="#">Par 532</a> [Maximum Freq] x 0.95.	Default: Par 4 x -1.2500 Min/Max: -8.0000/0.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real
76	 <b>Fwd Speed Limit</b> Sets a limit on the speed reference in the positive direction. This value can be entered as a positive value or zero. The maximum value equals <a href="#">Par 532</a> [Maximum Freq] x 0.95.	Default: Par 4 x 1.2500 Min/Max: 0.0000/8.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real
77	<b>Spd Ref TP Sel</b> Enter or write a value to select speed reference data displayed in <a href="#">Par 79</a> [Spd Ref TP Data] and <a href="#">Par 78</a> [Spd Ref TP RPM]. Note: The values for options 7, 8, & 9 were changed to “Reserved” for firmware version 2.004.	Default: 0 = “Zero” Options: 0 = “Zero” 1 = “User Ref” 2 = “Logic Select” 3 = “Lgc Sel Ref” 4 = “Ramp Spd Ref” 5 = “Ramp In” 6 = “Filt Spd Ref” 7 = “Reserved” 8 = “Reserved” 9 = “Reserved” 10 = “Amp Lim Stat” 11 = “Ramp Match” 12 = “S Crv Match” 13 = “S Array size” 14 = “S Array Indx” 15 = “Reserved” 16 = “Scl Ext Trim” 17 = “Trim FiltOut” 18 = “Ref w/Trim” 19 = “Amp Lim2 In” 20 = “Amp LimStat2” 21 = “Amp Lim2 Out” 22 = “FTD Ramp Out” 23 = “Reserved”			

No.	Name Description	Values	Linkable	Read-Write	Data Type																					
78	<b>Spd Ref TP RPM</b> Displays the value selected in <a href="#">Par 77</a> [Spd Ref TP Sel] in rpm. This display should only be used if the selected value is floating point data.	Default: 0.0000 Min/Max: -/+8.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real																					
79	<b>Spd Ref TP Data</b> Displays the value selected in <a href="#">Par 77</a> [Spd Ref TP Sel]. This display should only be used if the selected value is integer data.	Default: 0 Min/Max: -/+32768		RO	16-bit Integer																					
81	<b>Spd Reg P Gain</b> Sets the proportional gain of the speed regulator. This value is automatically calculated based on the bandwidth setting in <a href="#">Par 90</a> [Spd Reg BW]. Proportional gain may be manually adjusted by setting Par 90 [Spd Reg BW] to a value of zero. Units are (per unit torque) / (per unit speed). The maximum value for Par 81 [Spd Reg P Gain] = Par 90 [Spd Reg BW] x <a href="#">Par 9</a> [Total Inertia]	Default: 20.0000 Min/Max: 0.0000/3000.0000	Y	RW	Real																					
<table><tr><th>Total Inertia (Par 9)</th><th>Maximum Speed Regulator Bandwidth (Par 90)</th><th>Maximum Speed Regulator Proportional Gain (Par 81)</th></tr><tr><td>0.01</td><td>475 (0.5 ms)</td><td>4.75</td></tr><tr><td>0.01</td><td>650 (0.25 ms)</td><td>6.50</td></tr><tr><td>0.01</td><td>30 (sensorless mode)</td><td>0.03</td></tr><tr><td>2.0</td><td>475 (0.5 ms)</td><td>950</td></tr><tr><td>2.0</td><td>650 (0.25 ms)</td><td>1300</td></tr><tr><td>2.0</td><td>30 (sensorless mode)</td><td>60</td></tr></table> <p>Note: The Max. value was increased from 600.0000 for firmware version 3.001.</p>		Total Inertia (Par 9)	Maximum Speed Regulator Bandwidth (Par 90)	Maximum Speed Regulator Proportional Gain (Par 81)	0.01	475 (0.5 ms)	4.75	0.01	650 (0.25 ms)	6.50	0.01	30 (sensorless mode)	0.03	2.0	475 (0.5 ms)	950	2.0	650 (0.25 ms)	1300	2.0	30 (sensorless mode)	60				
Total Inertia (Par 9)	Maximum Speed Regulator Bandwidth (Par 90)	Maximum Speed Regulator Proportional Gain (Par 81)																								
0.01	475 (0.5 ms)	4.75																								
0.01	650 (0.25 ms)	6.50																								
0.01	30 (sensorless mode)	0.03																								
2.0	475 (0.5 ms)	950																								
2.0	650 (0.25 ms)	1300																								
2.0	30 (sensorless mode)	60																								
82	<b>Spd Reg I Gain</b> Sets the integral gain of the speed regulator. This value is automatically calculated based on the bandwidth setting in <a href="#">Par 90</a> [Spd Reg BW]. Integral gain may be manually adjusted by setting Par 90 [Spd Reg BW] to a value of zero. Units are (per unit torque/sec) / (per unit speed).	Default: 50.0000 Min/Max: 0.0000/100000.0000 Units: /s	Y	RW	Real																					
84	<b>SpdReg AntiBckup</b> By setting this parameter to 0.3, the drive will not over shoot to a step response. This parameter has no affect on the drive's response to load changes. The recommended setting is 0.1000 to 0.5000. Note: This parameter was changed to non-linkable for firmware version 3.001.	Default: 0.0000 Min/Max: 0.0000/0.5000		RW	Real																					
<p>Reference</p> <p>Feedback, SpdReg AntiBckup = 0.0</p> <p>Feedback, SpdReg AntiBckup = 0.3</p> <p>Over-Shoot</p> <p>Under-Shoot</p> <p>Error</p>																										
85	<b>Servo Lock Gain</b> Sets the gain of an additional integrator in the speed regulator. The effect of Servo Lock is to increase stiffness of the speed response to a load disturbance. It behaves like a position regulator with velocity feed forward, but without the pulse accuracy of a true position regulator. The units of Servo Lock are rad/sec. Gain should normally be set to less than 1/3 speed regulator bandwidth, or for the desired response. Set to zero to disable Servo Lock.	Default: 0.0000 Min/Max: 0.0000/300.0000 Units: /s	Y	RW	Real																					
86	<b>Spd Reg Droop</b> Specifies the amount of base speed that the speed reference is reduced when at full load torque. Use the droop function to cause the motor speed to decrease with an increase in load. The units are per unit speed / per unit torque.	Default: 0.0000 Min/Max: 0.0000/0.2500 Units: P.U.	Y	RW	Real																					
87	<b>SReg Trq Preset</b> When the drive is not enabled, this parameter presets integrator output <a href="#">Par 101</a> [SpdReg Integ Out] to a specified torque level. This ensures that the torque command will be at the preset value when the drive is enabled and run. <a href="#">Par 153</a> [Control Options], bit 18 [SpdRegPreset] = 0, enables this preset.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	16-bit Integer																					
89	<b>Spd Err Filt BW</b> Sets the bandwidth of a 2nd order Butterworth low pass filter, which reduces quantization noise. The units are rad/sec. A value of 0 will disable the filter. The value should be greater than 5 times the value of <a href="#">Par 90</a> [Spd Reg BW]. Note: The default value for this parameter was changed from 200.0000 to 700.0000 for firmware version 2.003.	Default: 700.0000 Min/Max: 0.0000/2000.0000 Units: rad/s	Y	RW	Real																					

No.	Name Description	Values	Linkable	Read-Write	Data Type
90	<b>Spd Reg BW</b> Sets the bandwidth of the speed regulator in rad/sec. Bandwidth is also referred to as the crossover frequency. Small signal time response is approximately 1/BW and is the time to reach 63% of set point. A change to this parameter will cause an automatic update of <a href="#">Par 81</a> [Spd Reg P Gain] and <a href="#">Par 82</a> [Spd Reg I Gain]. To disable the automatic gain calculation, set this parameter to a value of zero.	Default: 10.0000 Min/Max: 0.0000/500.0000 Units: rad/s	Y	RW	Real
91	<b>Spd Reg Damping</b> Sets the damping factor of the drive's characteristic equation and factors in the calculation of the integral gain. A damping factor of 1.0 is considered critical damp. Lowering the damping will produce faster load disturbance rejection, but may cause a more oscillatory response. When <a href="#">Par 90</a> [Spd Reg BW] is set to zero, damping factor has no effect.	Default: 1.0000 Min/Max: 0.5000/3.0000	Y	RW	Real
92	<b>SpdReg P Gain Mx</b> Places a limit on the maximum value of proportional gain in <a href="#">Par 81</a> [Spd Reg P Gain] and <a href="#">Par 104</a> [Srlss Spd Reg Kp]. When gains are automatically calculated, this parameter is necessary to limit the amplification of noise with increased inertia. Note: The Max. value was increased from 600.0000 for firmware version 3.001.	Default: 100.0000 Min/Max: 0.0000/3000.0000	Y	RW	Real
93	<b>SRegFB Filt Gain</b> Sets the lead term for the speed feedback filter. Values greater than 1 will result in a lead function and values less than 1 will result in a lag function. A value of 1 will disable the filter.	Default: 1.0000 Min/Max: -5.0000/20.0000	Y	RW	Real
94	<b>SReg FB Filt BW</b> Sets the frequency for the Speed Feedback filter.	Default: 35.0000 Min/Max: 0.0000/3760.0000 Units: rad/s	Y	RW	Real
95	<b>SRegOut FiltGain</b> Sets the lead term for the Speed Regulator output filter. Values greater than 1 will result in a lead function and values less than 1 will result in a lag function. A value of 1 will disable the filter. Note: The default value for this parameter was changed from 0.7000 to 1.0000 for firmware version 2.003.	Default: 1.0000 Min/Max: -/+5.0000	Y	RW	Real
96	<b>SReg Out Filt BW</b> Sets the frequency for the Speed Regulator output filter.	Default: 30.0000 Min/Max: 0.0000/3760.0000 Units: rad/s	Y	RW	Real
97	<b>Act Spd Reg BW</b> Displays the actual speed regulator bandwidth or crossover frequency. The value represents the bandwidth in <a href="#">Par 90</a> [Spd Reg BW] after the maximum bandwidth limits have been applied.	Default: 10.0000 Min/Max: 0.0000/500.0000 Units: rad/s		RO	Real
98	<b>Slip RPM @ FLA</b> Sets the amount of compensation to drive output at motor full load current (FLA). Note: This parameter was added for firmware version 2.003.	Default: Based on [Motor NP RPM] Min/Max: 0.0/1200.0 rpm Units: rpm	Y	RW	16-bit Integer
99	<b>Slip Comp Gain</b> Sets the response time of slip compensation. Note: This parameter was added for firmware version 2.003.	Default: 40.0 Min/Max: 1.0/100.0 Units: rad/s	Y	RW	16-bit Integer
100	<b>Speed Error</b> The error (difference) between the motor speed reference (+) and the filtered motor speed feedback (-).	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
101	<b>SpdReg Integ Out</b> The output value of the Speed Regulator Integral channel.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U. Scale: 1.0 P.U. Torque		RO	Real
102	<b>Spd Reg Pos Lim</b> Sets the positive limit of the Speed Regulator output value. The output of the Speed Regulator is limited by adjustable high and low limits.	Default: 3.0000 Min/Max: 0.0000/6.0000 Units: P.U. Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
103	<b>Spd Reg Neg Lim</b> Sets the negative limit of the Speed Regulator output value. The output of the Speed regulator is limited by adjustable high and low limits.	Default: -3.0000 Min/Max: -6.0000/0.0000 Units: P.U. Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
104	<b>Srlss Spd Reg Kp</b> Sets the proportional gain of the Speed Regulator when sensorless motor speed feedback is used. This value is automatically calculated based on the bandwidth set in <a href="#">Par 106</a> [Srlss Spd Reg BW]. Proportional gain may be manually adjusted by setting Par 106 to zero. This gain setting has no units (per unit torque) / (per unit speed error).	Default: 8.0000 Min/Max: 0.0000/200.0000	Y	RW	Real
105	<b>Srlss Spd Reg Ki</b> Sets the integral gain of the Speed Regulator when sensorless motor speed feedback is used. This value is automatically calculated based on the bandwidth set in <a href="#">Par 106</a> [Srlss Spd Reg BW]. Integral gain may be manually adjusted by setting Par 106 to zero. Units are '/s' (per unit torque/sec) / (per unit speed error).	Default: 8.0000 Min/Max: 0.0000/4095.8000 Units: /s	Y	RW	Real
106	<b>Srlss Spd Reg BW</b> Sets the bandwidth of the Speed Regulator when sensorless motor speed feedback is used. Bandwidth is also referred to as the crossover frequency. Small integral time response is approximately 1/BW and is the time to reach 63% of set point. A change to this parameter will cause an automatic update of <a href="#">Par 104</a> [Srlss Spd Reg Kp] and <a href="#">Par 105</a> [Srlss Spd Reg Ki]. To disable the automatic gain calculation, set this parameter to zero.	Default: 10.0000 Min/Max: 0.0000/30.0000 Units: rad/s	Y	RW	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type
107	<b>Slip RPM Meter</b> Displays the present amount of adjustment being applied as slip compensation. Note: This parameter was added for firmware version 2.003.	Default: 0.0 Min/Max: +/- 3000.0 Units: rpm		RO	16-bit Integer
108	<b>Spd Reg TP Sel</b> Enter or write a value to select Speed Regulator data displayed in <a href="#">Par 109</a> [Spd Reg TP Data]. Note: The values for options 10 & 11 were changed to "Reserved" for firmware version 2.004.	Default: 0 = "Zero" Options: 0 = "Zero" 27 = "Spd FiltOut" 1 = "Iq Rate BW" 28 = "Servo Lock" 2 = "Reserved" 29 = "Spd+ServLock" 3 = "PGain Max BW" 30 = "Prop Output" 4 = "BW Limit" 31 = "Intg Input" 5 = "InertiaMaxBW" 32 = "SclD Int Pre" 6 = "BW Lim Stat" 33 = "Sel Int Pre" 7 = "BW Select" 34 = "Droop Output" 8 = "Totl Inertia" 35 = "Out Lim Stat" 9 = "TI Lim Stat" 36 = "Intg Hold" 10 = "Reserved" 37 = "Srlss ZeroWe" 11 = "Reserved" 38 = "I GainParLim" 12 = "I Rate Limit" 39 = "P GainParLim" 13 = "I RtLim Stat" 40 = "SrvLck ParLim" 14 = "PGain Max" 41 = "AntiBkup PLm" 15 = "GnMx LimStat" 42 = "Droop ParLim" 16 = "Damping" 43 = "Pos Lim Stat" 17 = "Dmp Lim Stat" 44 = "Neg Lim Stat" 18 = "Reserved" 45 = "Limiter Out" 19 = "Srls KpMxBW" 46 = "Active Pgain" 20 = "Srls BWLimit" 47 = "Active Igain" 21 = "SrlsInrtMxBW" 48 = "Reserved" 22 = "SrlsBWSelect" 49 = "Reserved" 23 = "Srls BW Calc" 50 = "Reserved" 24 = "Snsr BW Calc" 51 = "Reserved" 25 = "Reserved" 52 = "Reserved" 26 = "Reserved" 53 = "Reserved"			
109	<b>Spd Reg TP Data</b> Displays the data selected by <a href="#">Par 108</a> [Spd Reg TP Sel].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
110	<b>Speed/TorqueMode</b> Selects the source for the drive torque reference. Note: Values 7 & 8 were added for firmware version 3.001.	Default: 1 = "Speed Reg" Options: 0 = "Zero Torque" 5 = "Sum Spd/Trq" 1 = "Speed Reg" 6 = "AbsMnSpd/Trq" 2 = "Torque Ref" 7 = "SLAT Minimum" 3 = "Min Spd/Trq" 8 = "SLAT Maximum" 4 = "Max Spd/Trq"			
111	<b>Torque Ref 1</b> Supplies an external motor torque reference to the drive. This parameter is divided by the value in <a href="#">Par 112</a> [Torq Ref1 Div]. A value of 1.0 represents rated torque of the motor.	Default: 0.0000 Min/Max: -/+2200000000.0000 Scale: 1.0 Rated Motor Torque	Y	RW	Real
112	<b>Torque Ref1 Div</b> <a href="#">Par 111</a> [Torque Ref 1] is divided by this number. Use this parameter to scale the value of Par 111 [Torque Ref 1].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
113	<b>Torque Ref 2</b> Supplies an external motor torque reference to the drive. This parameter is multiplied by the value in <a href="#">Par 114</a> [Torq Ref2 Mult]. A value of 1.0 represents rated torque of the motor.	Default: 0.0000 Min/Max: -/+2200000000.0000 Scale: 1.0 Rated Motor Torque	Y	RW	Real
114	<b>Torque Ref2 Mult</b> <a href="#">Par 113</a> [Torque Ref 2] is multiplied by this number. Use this parameter to scale the value of Par 113 [Torque Ref 2].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
115	<b>Torque Trim</b> The amount added to <a href="#">Par 111</a> [Torque Ref 1] and <a href="#">Par 113</a> [Torque Ref 2] before the Speed/Torque Mode Selector. A value of 1.0 represents rated torque of the motor.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U. Scale: 1.0 Rated Motor Torque	Y	RW	Real
116	<b>Torque Step</b> The amount added to the selected Torque Reference before notch filtering or limits are applied. A value of 1.0 represents rated torque of the motor.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U. Scale: 1.0 Rated Motor Torque	Y	RW	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type
117	<b>NotchAttenuation</b> Sets the depth for the Notch Filter. Attenuation is the ratio of the output to the input at the notch frequency. An attenuation of 30 means that the notch output is 1/30 <sup>th</sup> of the input at the specified frequency. Calculation: Attenuation = Input / Output 	Default: 50 Min/Max: 0/500	Y	RW	Real
118	<b>Notch Filt Freq</b> The center frequency for Notch filter. To disable, set to zero (0).	Default: 0.0000 Min/Max: 0.0000/500.0000 Units: Hz	Y	RW	Real
119	<b>SLAT ErrorSetpnt</b> Determines the rpms at which the drive will switch from speed mode to the Speed Limited Adjustable Torque (SLAT) min. or SLAT max. mode, identified in <a href="#">Par 110</a> [Speed/Torque Mode] bit 7 "SLAT Minimum" or bit 8 "SLAT Maximum". Note: This parameter was added for firmware version 3.001.	Default: 0.005 Min/Max: 0.0/0.1 Units: rpm	Y	RW	Real
120	<b>SLAT Dwell Time</b> SLAT control dwell time. The time in seconds that the drive can be above the error set point in <a href="#">Par 119</a> [SLAT ErrorSetpnt] before returning to the SLAT min. or SLAT max. mode. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: 0.0/2.0 Units: s	Y	RW	Real
123	<b>Trq PosLim Actl</b> Sets the internal torque limit for positive torque reference values. The positive internal motor torque will not be allowed to exceed this value.	Default: 1.0 Min/Max: 0.0/8.0 Units: P.U.		RO	Real
124	<b>Trq NegLim Actl</b> Sets the internal torque limit for negative torque reference values. The internal negative motor torque will not be allowed to exceed this value.	Default: -1.0 Min/Max: -8.0/0.0 Units: P.U.		RO	Real
125	<b>Torque Pos Limit</b> Sets the external torque limit for positive torque reference values. The external positive motor torque will not be allowed to exceed this value.	Default: 2.0000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
126	<b>Torque Neg Limit</b> Sets the external torque limit for negative torque reference values. The external negative motor torque will not be allowed to exceed this value.	Default: -2.0000 Min/Max: -8.0000/0.0000 Units: P.U.	Y	RW	Real
127	<b>Mtring Power Lim</b> Sets the maximum motoring (positive) power of the drive. This can be calculated by multiplying the desired maximum motor torque and the maximum motor speed. A value of 1.0 = nominal motor power.	Default: 8.0000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
128	<b>Regen Power Lim</b> Sets the maximum regenerative (negative) power of the drive. This can be calculated by multiplying the desired maximum motor torque and the maximum motor speed. A value of 1.0 = nominal motor power. Note: The default value for this parameter was changed from -1.0000 to -0.5000 for firmware version 2.003.	Default: -0.5000 Min/Max: -8.0000/0.0000 Units: P.U.	Y	RW	Real
129	 <b>Atune Trq Ref</b> Sets the motor torque that is applied to the motor during the flux current and inertia tests. Note: The minimum value for this parameter was changed from 0.2500 to 0.2000 for firmware version 2.003.	Default: 0.50 Min/Max: 0.2/1.0 Units: P.U. Scale: 1.0 = P.U. Motor to Torque		RW	Real
130	<b>Trq Ref TP Sel</b> Enter or write a value to select torque reference data displayed in <a href="#">Par 131</a> [Trq Ref TP Data]. Note: The value for option 5 was changed to "Reserved" for firmware version 2.004.	Default: 0 = "Zero" Options: <div> <div> 0 = "Zero"  1 = "Scale Output"  2 = "Spd Torque"  3 = "Trq Mode Out"  4 = "Actv TrqMode"  5 = "Reserved"  6 = "Trq En Input"  7 = "NotchFiltOut"  8 = "NotchFilt In"  9 = "Trq Lim In"  10 = "Bus Reg Out"  11 = "Pos Pwr Lim"  12 = "Neg Pwr Lim"  13 = "Pos Atun Trq"  14 = "Neg Atun Trq"  15 = "Pos Lim Src" </div> <div> 16 = "Neg Lim Src"  17 = "MPwr Par Lim"  18 = "RPwr Par Lim"  19 = "+Trq ParLim"  20 = "-Trq ParLim"  21 = "Nom Bus Volt"  22 = "Bus Volt Hys"  23 = "Bus Reg Ref"  24 = "Bus Reg Err"  25 = "Bus Reg Intg"  26 = "BusReg Clamp"  27 = "BusRegOutput"  28 = "IAA Filt Out"  29 = "IAA dVf/dt"  30 = "MC Trq Lim"  31 = "IqActlTrqLim" </div> </div>			Real

133	<b>Inert Adapt BW</b> This parameter sets the bandwidth of the Inertia Adaptation function when the IAA function is selected (Par 132 [Inert Adapt Sel], bit 0 = 1). Typical IAA bandwidths range from 70 to 150 rad/sec with 100 rad/sec nominal best.  If the Load Estimate function is selected (Par 132 [Inert Adapt Sel], bit 0 = 1), then this parameter sets the natural frequency of a filter in rad/sec. Typical values range from 10 to 150 rad/sec with higher values being more responsive to disturbances but with increased system noise. There is no nominal best value, but 40 rad/sec is a suggested starting point. This adjustment may not function well in 'sloppy' geared systems.  If both Inertia Adaptation and Load Estimate functions are active, use a bandwidth setting of 100 rad/sec.	Default: 100.0000 Min/Max: 10.0000/250.0000 Units: rad/s	Y	RW	Real																																																																																																		
134	<b>Inert Adapt Gain</b> This parameter sets a multiplier of system inertia when the Inertia Adaptation function is selected (Par 132 [Inert Adapt Sel], bit 0 = 1). Higher values may cause high frequency ringing, while smaller values may cause fundamental load instability. A typical value is 0.5 This parameter has no affect on the Load Estimate function.	Default: 0.500 Min/Max: 0.300/1.000	Y	RW	Real																																																																																																		
136 137 138	<b>Skip Speed 1</b> <b>Skip Speed 2</b> <b>Skip Speed 3</b> Sets a frequency at which the drive will not operate. [Skip Speed 1 - 3] and Par 139 [Skip Speed Band] must not equal 0. Note: These parameters were added for firmware version 2.003.	Default: 0.0 Min/Max: -/+30000.0 Units: rpm	Y	RW	16-bit Integer																																																																																																		
139	<b>Skip Speed Band</b> Determines the bandwidth around a skip frequency. [Skip Speed Band] is split, applying 1/2 above and 1/2 below the actual skip frequency. The same bandwidth applies to all skip frequencies. Note: This parameter was added for firmware version 2.003.	Default: 0.0 Min/Max: 0.0/1000.0 Units: rpm	Y	RW	16-bit Integer

10	Ready	Enable input is high & drive is fault free																																																																																																																																																																																																							
11	At Limit	Speed, Power, Current or Torque is being limited, refer to <a href="#">Par 304</a>																																																																																																																																																																																																							
12	Tach Loss SW	Failure is detected in primary speed or position feedback device & drive has switched to secondary device																																																																																																																																																																																																							
13	At Zero Spd	Speed feedback is within limits defined in <a href="#">Par 160</a>																																																																																																																																																																																																							
14	At Setpt Spd	Speed feedback is within limits defined in <a href="#">Par 41</a> and <a href="#">Par 171</a>																																																																																																																																																																																																							
Bit	Name	Current Function																																																																																																																																																																																																							
15	Enable On																																																																																																																																																																																																								
16	At Setpt 1	<a href="#">Par 172</a> value is within limits defined by <a href="#">Par 173</a> and <a href="#">Par 174</a>																																																																																																																																																																																																							
17	Above Setpt 2	<a href="#">Par 175</a> value is within limits defined by <a href="#">Par 176</a> and <a href="#">Par 177</a>																																																																																																																																																																																																							
18	MC Active	Drive is controlling motor (same as enabled)																																																																																																																																																																																																							
19	MC Commis	Motor control commissioning in progress																																																																																																																																																																																																							
20	Spd Commis	Speed control commissioning in progress																																																																																																																																																																																																							
21	Hw Enable On																																																																																																																																																																																																								
22	Torque Mode	<a href="#">Par 110</a> value is 2, 3, 4, 5 or 6																																																																																																																																																																																																							
23	Speed Mode	<a href="#">Par 110</a> value is 1 & position control is not enabled																																																																																																																																																																																																							
24	Position Mode	Position control active & <a href="#">Par 110</a> value is not 2, 3, 4, 5 or 6																																																																																																																																																																																																							
25	Start Active	Start command received & controlling motor																																																																																																																																																																																																							
26	Command Run	Run command received																																																																																																																																																																																																							
28-30	Spd Ref Act1-3																																																																																																																																																																																																								
31	LogixPresent																																																																																																																																																																																																								
156	<b>Start Inhibits</b> Indicates which condition is preventing the drive from starting or running. <ul style="list-style-type: none"><li>Bit 16 "GateShutDown" is set when the shunt jumper in the 16-15 position on the Main Control board is missing and a Safe-Off option board is not present.</li><li>Bit 17 "SafeOff Enbl" is set when the HW Enable jumper (P22) is in the Bypass position (on pins 1&amp;3) and the Safe-Off option board is present. A HW Enable is required when a safe-off board is used.</li><li>Bit 21 "Sleep Stop" is set when the sleep mode has stopped the drive.</li><li>Bit 22 "Sleep Config" is set when sleep mode has not been setup correctly. Check the sleep/wake levels and digital input configuration.</li></ul> Note: Bit 18 "MC Config" was added to this parameter for firmware version 2.003. Added bit 20 "High BusVolt" for firmware version 4.001. Bits 21 and 22 were added for firmware version 5.002.

168	<b>Normal Stop Mode</b> Sets the method of stopping the drive when a stop command is given. Normal Stop command and the RUN input changing from true to false will command a Normal Stop.  Ramp Stop = decelerates to zero speed at the decel rate CurLim Stop = Max torque / current applied until zero speed Coast Stop = power removed from motor, motor coasts to zero	Default: 0 = “Ramp Stop” Options: 0 = “Ramp Stop” 1 = “CurLim Stop” 2 = “Coast Stop”			
169	<b>SrLss ZeroSpdLim</b> Functionally equivalent to <a href="#">Par 160</a> [Zero Speed Lim], but is used exclusively in Sensorless speed mode. The value is automatically set from <a href="#">Par 3</a> [Motor NP Hertz], <a href="#">Par 4</a> [Motor NP RPM] or <a href="#">Par 7</a> [Motor Poles]. The automatic setting corresponds to the rated slip speed of the motor (synchronous speed - nameplate speed). The value can be manually set.	Default: 49.9975 Min/Max: 0.0000/875.0000 Units: rpm	Y	RW	Real
170	<b>Flying StartGain</b> This parameter is currently not used. Note: This parameter was added for firmware version 2.003.	Default: 4000 Min/Max: 0/32767		RW	16-bit Integer
171	<b>Set Speed Lim</b> Creates a tolerance - hysteresis band around the value in <a href="#">Par 41</a> [Limited Spd Ref] for comparison to average speed feedback. The comparison controls bit 14 “At Setpt Spd” of <a href="#">Par 155</a> [Logic Status]. In general bit 14 “At Setpt Spd” turns on when the feedback is within the tolerance of the reference. • Turn-on level for rising feedback = Limited Spd Ref - Limit. • Turn-off level for rising feedback = Limited Spd Ref + 2(Limit). • Turn-on level for falling feedback = Limited Spd Ref + Limit. • Turn-off level for falling feedback = Limited Spd Ref - 2(Limit).	Default: 17.6400 Min/Max: 0.0000/882.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
172	<b>Setpt 1 Data</b> Provides data for comparison to <a href="#">Par 173</a> [Setpt1 TripPoint], driving bit 16 “At Setpt 1” of <a href="#">Par 155</a> [Logic Status]. For more information, please see <a href="#">Setpt 1 Data on page 169</a> .	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
173	<b>Setpt1 TripPoint</b> Provides the midpoint for operation of bit 16 “At Setpt 1” of <a href="#">Par 155</a> [Logic Status].	Default: 0.1000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
174	<b>Setpt 1 Limit</b> Creates a tolerance - hysteresis band around the value in <a href="#">Par 173</a> [Setpt1 TripPoint]. • Turn-on level for ascending data = TripPoint - Limit. • Turn-off level for ascending data = TripPoint + 2(Limit). • Turn-on level for descending data = TripPoint + Limit. • Turn-off level for descending data = TripPoint - 2(Limit).	Default: 0.0100 Min/Max: 0.0000/0.5000 Units: P.U.	Y	RW	Real
175	<b>Setpt 2 Data</b> Provides data for comparison to <a href="#">Par 176</a> [Setpt2 TripPoint], driving bit 17 “Above Setpt 2” of <a href="#">Par 155</a> [Logic Status]. For more information, please see <a href="#">Setpt 2 Data on page 169</a> .	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
176	<b>Setpt2 TripPoint</b> Provides the midpoint for operation of bit 17 “Above Setpt 2” of <a href="#">Par 155</a> [Logic Status].	Default: 0.2000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type
177	<b>Setpt 2 Limit</b> Creates a tolerance - hysteresis band around the value in <a href="#">Par 176</a> [Setpt2 TripPoint]. For positive setpoints: • Turn-on level = TripPoint • Turn-off level = TripPoint - Limit. For negative setpoints: • Turn-on level = TripPoint • Turn-off level = TripPoint + Limit.	Default: 0.0100 Min/Max: 0.0000/0.5000 Units: P.U.	Y	RW	Real
178	<b>PI TP Sel</b> Enter or write a value to select Process Control PI data displayed by <a href="#">Par 179</a> [PI TP Data]. The values for options 1 & 8 were changed to "Reserved" for firmware version 2.004.	Default: 0 = "Zero" Options: 0 = "Zero" 7 = "Status Hold" 1 = "Reserved" 8 = "Reserved" 2 = "LPF Output" 9 = "Reset Status" 3 = "P Gain Term" 10 = "Time Axis En" 4 = "Reg Output" 11 = "Enbl Status" 5 = "On Intg Lim" 12 = "Out Max Lim" 6 = "On Out Limit" 13 = "Out Min Lim"			
179	<b>PI TP Data</b> Displays the data selected by <a href="#">Par 178</a> [PI TP Sel].	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
180	<b>PI Output</b> The final output of the Process Control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
181	<b>PI Reference</b> The reference input for the process control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
182	<b>PI Feedback</b> The feedback input for the process control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
183	<b>PI Error</b> Displays the error of the process trim reference minus the process trim feedback.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
184	<b>PI Lpass Filt BW</b> Sets the bandwidth of a single pole filter applied to the error input of the Process Control regulator. The input to the filter is the difference between <a href="#">Par 181</a> [PI Reference] and <a href="#">Par 182</a> [PI Feedback]. The output of this filter is used as the input to the process control regulator.	Default: 0.0000 Min/Max: 0.0000/500.0000 Units: rad/s	Y	RW	Real
185	<b>PI Preload</b> Presets the integrator of the Process Control regulator.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
186	<b>PI Prop Gain</b> Controls the proportional gain of the Process Control regulator. If the proportional gain is 1.0, the regulator output equals 1 P.U. for 1 P.U. error.	Default: 8.0000 Min/Max: 0.0000/200.0000	Y	RW	Real
187	<b>PI Integ Time</b> Controls the integral gain of the Process Control regulator. If the integrator time is 1.0, the regulator output equals 1 P.U. in 1 second for 1 P.U. error.	Default: 8.0000 Min/Max: 0.0000/4000.0000 Units: /s	Y	RW	Real
188	<b>PI Integ HLim</b> The high limit of the integral gain channel for the Process Control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.1000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
189	<b>PI Integ LLim</b> The low limit of the integral gain channel for the Process Control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: -0.1000 Min/Max: -8.0000/0.0000 Units: P.U.	Y	RW	Real
190	<b>PI Integ Output</b> Displays the output value of the integral channel of the Process Control regulator. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
191	<b>PI High Limit</b> The high limit of the Process Control regulator output. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: 0.1000 Min/Max: 0.0000/8.0000 Units: P.U.	Y	RW	Real
192	<b>PI Lower Limit</b> The low limit of the Process Control regulator output. A value of 1 can represent either base motor speed, motor rated torque, or 100% for some external function.	Default: -0.1000 Min/Max: -8.0000/0.0000 Units: P.U.	Y	RW	Real
196	<b>ParamAccessLevel</b> The value of this parameter establishes the level of parameter access for the Human Interface Module (HIM). • Value 0 - Basic grants access to the minimum number of parameters • Value 1 - Advanced grants access to a larger group of parameters	Default: 0 = "Basic" Options: 0 = "Basic" 1 = "Advanced"		RW	16-bit Integer
201	<b>Language</b> Selects the display language when using an LCD HIM. Currently, only option 0 - "English" is available.	Default: 0 = "English" Options: 0 = "English" 1 = "Alt Language"		RW	16-bit Integer

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																						
202	<b>Time Axis Rate</b> Sets rate (1/Sec) for the Time Function Generator to ramp from an output of 0 to 1 and from 1 to 0.	Default: Min/Max: Units:	1.0000 0.0100/20.0000 /s	Y	RW	Real																																																						
203	<b>Time Axis Output</b> The output of the Time Function Generator. When the Time Function Generator is enabled by <a href="#">Par 151</a> [Logic Command] bit 3 "Time Axis En", or <a href="#">Par 153</a> [Control Options], bit 24 "Time Axis En", the value of this parameter ramps from 0 to 1 at a rate determined by <a href="#">Par 202</a> [Time Axis Rate]. Conversely, when the Time Function Generator is disabled, the value of this parameter ramps from 1 to 0.	Default: Min/Max:	0.0000 0.0000/1.0000		RO	Real																																																						
204	<b>LimGen Y axis Mx</b> Sets <a href="#">Par 207</a> [Limit Gen Hi Out] and <a href="#">Par 208</a> [Limit Gen Lo Out] when the absolute value of <a href="#">Par 206</a> [LimGen X axis In] is greater than or equal to 1.	Default: Min/Max: Units:	0.2500 0.0000/8.0000 P.U.	Y	RW	Real																																																						
205	<b>LimGen Y axis Mn</b> Sets <a href="#">Par 207</a> [Limit Gen Hi Out] and <a href="#">Par 208</a> [Limit Gen Lo Out] when the absolute value of <a href="#">Par 206</a> [LimGen X axis In] is equal to 0.	Default: Min/Max: Units:	0.0500 0.0000/8.0000 P.U.	Y	RW	Real																																																						
206	<b>LimGen X axis In</b> The X axis input to the Limit Generator. Typically this parameter is linked to a speed reference or to <a href="#">Par 203</a> [Time Axis Output].	Default: Min/Max:	Y    Y	Y	RW	Real																																																						
207	<b>Limit Gen Hi Out</b> Displays the positive output of the Limit Generator. When <a href="#">Par 206</a> [Limit Gen X axis In] is greater than or equal to 1, this value equals <a href="#">Par 204</a> [Limit Gen Y axis Mx]. When <a href="#">Par 206</a> [Limit Gen X axis In] is equal to 0, this value equals <a href="#">Par 205</a> [Limit Gen Y axis Mn]. For values of X Axis input between 0 and 1, the value of this parameter is interpolated from Y axis min. and max. values. Typically it is linked to <a href="#">Par 188</a> [PI Integ HLim].	Default: Min/Max: Units:	8.0000 0.0000/8.0000 P.U.		RO	Real																																																						
208	<b>Limit Gen Lo Out</b> Displays the negative output of the Limit Generator. The value of this parameter is the negative of <a href="#">Par 207</a> [Limit Gen Hi Out]. Typically it is linked to <a href="#">Par 189</a> [PI Integ LLim].	Default: Min/Max: Units:	-8.0000 -8.0000/0.0000 P.U.		RO	Real																																																						
210	<b>PeakDtct Ctrl In</b> Sets the configuration of the two peak/level detectors. Peak detection (when "set" and "hold" are off) causes the output to capture the peak min./max. <ul style="list-style-type: none"><li>• Bit 2 "Peak1SelHigh" and bit 6 "Peak2SelHigh" determine if the peak/level detector is positive or negative. If the bit is set the detector detects positive peaks or levels above the preset. If the bit is not set the detector detects "valleys" or levels below the preset. The output shows the min. or max. peak.</li><li>• Bit 0 "Peak 1 Set" bit is used to reset the output to the value in <a href="#">Par 214</a> [PeakDtct1 Preset] (default 0). Bit 4 "Peak 2 Set" bit is used to reset the output to the value in <a href="#">Par 218</a> [PeakDtct2 Preset] (default 0).</li><li>• Bit 1 "Peak 1 Hold" is used to hold the output at the present value in <a href="#">Par 214</a> [PeakDtct1 Preset]. Bit 5 "Peak 2 Hold" is used to hold the output at the present value in <a href="#">Par 218</a> [PeakDtct2 Preset].</li></ul> <table><tr><td>Options</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Peak2SelHigh</td><td>Peak 2 Hold</td><td>Peak 2 Set</td><td>Reserved</td><td>Peak1SelHigh</td><td>Peak 1 Hold</td><td>Peak 1 Set</td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td><td></td></tr></table> <div>0 = False 1 = True</div>						Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Peak2SelHigh	Peak 2 Hold	Peak 2 Set	Reserved	Peak1SelHigh	Peak 1 Hold	Peak 1 Set	Default	x	x	x	x	x	x	x	x	x	x	0	0	0	0	0	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	
Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Peak2SelHigh	Peak 2 Hold	Peak 2 Set	Reserved	Peak1SelHigh	Peak 1 Hold	Peak 1 Set

Default	x	x	x	x	x	x	x	x	x	x	x	x	x	x	0	0																																												
Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0																																												
212	<b>PkDtct1 In DInt</b> Integer input to the first peak/level detector.	Default: Min/Max:	0 -/+2147483648	Y	RW	32-bit Integer																																																						
213	<b>PkDtct1 In Real</b> Floating point input to the first peak/level detector.	Default: Min/Max:	0.0000 -/+2200000000.0000	Y	RW	Real																																																						
214	<b>PeakDtct1 Preset</b> The first detector (in set or hold modes) compares this value to its input for level detection. When the detector trips (in set mode) it transfers the value of this parameter to its output.	Default: Min/Max:	0.0000 -/+2200000000.0000	Y	RW	Real																																																						
215	<b>PeakDetect1 Out</b> Output from the first peak/level detector.	Default: Min/Max:	0.0000 -/+2200000000.0000		RO	Real																																																						
216	<b>PkDtct2 In DInt</b> Integer input to second peak/level detector.	Default: Min/Max:	0 -/+2147483648	Y	RW	32-bit Integer																																																						
217	<b>PkDtct2 In Real</b> Floating point input to second peak/level detector.	Default: Min/Max:	0.0000 -/+2200000000.0000	Y	RW	Real																																																						
218	<b>PeakDtct2 Preset</b> The second detector (in set or hold modes) compares this value to its input for level detection. When the detector trips (in set mode) it transfers the value of this parameter to its output.	Default: Min/Max:	0.0000 -/+2200000000.0000	Y	RW	Real																																																						

No.	Name Description	Values	Linkable	Read-Write	Data Type
219	<b>PeakDetect2 Out</b> Output from the second peak/level detector.	Default: 0.00 Min/Max: 0.00/1200.00		RO	Real
221	<b>Load Estimate</b> Displays the estimated load torque, which is the side effect of the speed observer and does not include torque to accelerate or decelerate the motor if the inertia input is correct. The value is provided for display purposes.	Default: 0.0 Min/Max: -/+8.0 P.U. Units: P.U.		RO	Real
222	 <b>Mtr Fdbk Sel Pri</b> Selects primary feedback device. The primary feedback device configuration must not be set to fault on an event in order to allow operational feedback switch over to the alternate feedback device set in <a href="#">Par 223</a> [Mtr Fdbk Sel Alt]. Notes: <a href="#">Par 485</a> [Motor Ctrl Mode] must be set to FOC for Sensorless feedback selection to be active. Selection 5 is only available when compatible feedback option card is installed. This parameter was changed to non-linkable for firmware version 3.001.	Default: 0 = "Encoder 0" Options: 0 = "Encoder 0"      4 = "Motor Sim" 1 = "Encoder 1"      5 = "FB Opt Port0" 2 = "Sensorless" 3 = "Reserved"			
223	 <b>Mtr Fdbk Sel Alt</b> Selects alternate feedback device if the feedback device selected in <a href="#">Par 222</a> [Mtr Fdbk Sel Pri] fails. Notes: <a href="#">Par 485</a> [Motor Ctrl Mode] must be set to FOC for Sensorless feedback selection to be active. Selection 5 is only available when compatible feedback option card is installed. This parameter was changed to non-linkable for firmware version 3.001.	Default: 2 = "Sensorless" Options: 0 = "Encoder 0"      4 = "Motor Sim" 1 = "Encoder 1"      5 = "FB Opt Port0" 2 = "Sensorless" 3 = "Reserved"			
224	<b>TachSwitch Level</b> Sets the detection level for the automatic tach loss switch-over routine. A drop in feedback speed at this percent of rated speed over 0.5 msec will cause a tach switch from primary to alternate feedback device. This feature is enabled when bit 16 "Auto Tach Sw" in <a href="#">Par 153</a> [Control Options] is selected.  Setting this level lower will make the tach switch detection more sensitive and lower the minimum speed at which a tach switch can occur. Setting this level higher will make the tach switch less sensitive and raise the minimum speed for tach switch detection. Note: This parameter was changed to non-linkable for firmware version 3.001.	Default: 10.0000 Min/Max: 5.0000/25.0000 Units: %		RW	Real
225	 <b>Virtual Edge/Rev</b> Set the edges per revolution (EPR) scaling for calculating motor position. Used in the calculation of the position feedback such as <a href="#">Par 229</a> [MtrPosit Stimulat].	Default: 4096 Min/Max: 10/16777216 Units: EPR		RW	32-bit Integer
226	<b>Motor Speed Est</b> Displays the estimated motor speed, calculated when the selected feedback is sensorless or when encoderless ridgethrough is enabled.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
227	<b>Motor Posit Est</b> Summation (or integration) of <a href="#">Par 226</a> [Motor Speed Est] scaled by the value in <a href="#">Par 225</a> [Virtual Edge/Rev].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
228	<b>MtrSpd Simulated</b> The motor speed output of the motor simulator. The motor simulator provides motor speed information during setup and troubleshooting when actual motor control is not desired or possible. To use the motor simulator, enter a value of 4 in <a href="#">Par 222</a> [Mtr Fdbk Sel Pri] or <a href="#">Par 223</a> [Mtr Fdbk Sel Alt].	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
229	<b>MtrPosit Simulat</b> The motor position output of the motor simulator. The motor simulator provides motor position information during setup and troubleshooting when actual motor control is not desired or possible. To use the motor simulator, enter a value of 4 in <a href="#">Par 222</a> [Mtr Fdbk Sel Pri] or <a href="#">Par 223</a> [Mtr Fdbk Sel Alt].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
230	<b>Encdr0 Position</b> Displays the position feedback (accumulator) from encoder 0. The value changes by a value of four times (4x) the Pulses Per Revolution (PPR) rating of the encoder for each full revolution of the encoder shaft. Used by the Velocity Position Loop (VPL) to close the position loop if position control is selected.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
231	<b>Encdr0 Spd Fdbk</b> Displays the speed feedback from encoder 0. Calculated from the change of <a href="#">Par 230</a> [Encdr0 Position] and <a href="#">Par 222</a> [Encoder0 PPR].	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																																																																
232	<div><div></div><div><b>Encoder0 PPR</b> Sets the pulse per revolution rating of the feedback device connected to the Encoder 0 input. No.	Name Description	Values	Linkable	Read-Write	Data Type
233	<b>Encdr 0/1 Config</b> Specifies the configuration options for the encoder 0 and encoder 1. <ul style="list-style-type: none"> <li>Bits 0 “Enc0 Filt bt0” through 3 “Enc0 Filt bt3”, or Bits 16 “Enc1 Filt bt0” through 19 “Enc1 Filt bt3” configure the encoder input filter (see <a href="#">Table 233A: Encoder Input Filter Settings</a>). The filter requires the input signal to be stable for the specified time period. Input signal transitions within the filter time setting will be ignored. Bits 0-3 and 16-19 add 100ns filtering per stage to encoder inputs.</li> <li>Bits 4 “Enc0 4x” and 5 “Enc0 A Phs” or 20 “Enc1 4x” and 21 “Enc1 A Phs” determine how the encoder channel A and B signals will be interpreted. Typically, both encoder phases A and B are used so that direction information is available. <a href="#">Par 230</a> [Encdr0 Position] counts up for forward rotation and down for reverse rotation. If bit 5 is set, then the B phase signal is ignored. As a result, the encoder position will only increase, regardless of rotation direction. Bits 4 and 5 together also determine the number of edges counted per encoder pulse (see <a href="#">Table 233B: Multiplier and Direction Settings</a>). “4x” sampling counts both rise and fall of both A and B encoder phases, hence 4 edges per pulse. In 4x mode, the encoder position will change by four times the encoder pulses per revolution rating (PPR) per encoder revolution (e.g., it increments the value in <a href="#">Par 230</a> [Encdr0 Position] by 4096 for one revolution of a 1024 PPR encoder).</li> <li>Bit 6 “Enc0 Dir” and 22 “Enc1 Dir” inverts the channel A input, thus reversing the direction of the feedback. Note that changes in encoder direction (bit 6 or 22) may require changing <a href="#">Par 153</a> [Control Options] bit 10 “Motor Dir”.</li> <li>Bit 7 “Enc0 EdgTime” or bit 23 “Enc1 EdgTime” configures the method of sampling used by the Velocity Position Loop (VPL). Setting the bit chooses “Edge to Edge” sampling, while resetting the bit to zero selects “Simple Difference” sampling. “Simple Difference” sampling calculates speed by examining the difference between pulse counts over a fixed sample time. “Edge to Edge” sampling adjusts the sample time to synchronize with the position count updates from the daughter card - improving the accuracy of the speed calculation.</li> <li>Bits 10 “En0SmplRate bt0” through 12 “En0SmplRate bt2” or bits 26 “En1SmplRate bt0” through 28 “En1SmplRate bt2” configure the Finite Impulse Response (FIR) Filter (see <a href="#">Table 233C: FIR Filter Settings</a>). This setting reduces the effect of noisy feedback on the system. Refer to the “Speed/Position Feedback” section of the <i>PowerFlex® 700S with Phase II Control Reference Manual</i>, publication PFLEX-RM003 for details.</li> </ul> Note: Bit 27 is set to 0 = False by default for firmware version 1.11 and is set to 1 = True by default for firmware version 2.003.

237

**RegisLtch0/1 Ctrl**

Configures the control for registration latch 0 and 1.

- Set bit 0 "RLO Arm Req" and bit 16 "RL1 Arm Req" to arm the registration logic for the next trigger event. The particular latch will be armed and ready to be strobed on the next occurrence of the trigger input.
- Set bit 1 "RLO DisarmReq" and bit 17 "RL1 DisarmReq" to disarm the registration logic for next trigger event.

After the registration is captured, bit 0 "RLO Arm Req" and bit 16 "RL1 Arm Req" automatically resets back to 0 after found. Bit 1 "RLO DisarmReq" and bit 17 "RL1 DisarmReq" are only needed to disarm a registration latch that has not been found yet. Setting bits 1 and 17 will clear the bits 0 and 6. Setting bits 0 and 6 sets bits 0 "RLO Armed" and bit 16 "RL1 Armed" and clears bits 1 "RLO Found" and bit 17 "RL1 Found" of [Par 238](#) [RegisLtch0/1Stat].

**268 Resolver0 Cnfg**

Configures options for the resolver option card port 0.

- Setting bit 0 "Cable Tune" enables the cable tuning test, resetting the bit to zero disables the test. Refer to the section on Resolver Cable Tuning Tests in publication PFLEX-RM003, *Reference Manual - PowerFlex 700S Drives with Phase II Control* for more information.
- Bit 1 "Tune Param" has been disabled.
- Bits 2 "Resolution 0" and 3 "Resolution 1" select the resolver resolution (see [Table 268A: Resolution Settings](#)). This determines the number of significant bits that are calculated in the value of [Par 250](#) [B Opt0 Posit]. It does not affect the number of counts created per resolver revolution (see [Table 268B: Resolution and Least Significant Bits Used](#)). Also, the resolution sets a limit on the maximum tracking speed (see [Table 268C: Resolution and Resolver Tracking Speed](#)).
- Setting bit 4 "Energize" energizes the resolver, resetting the bit to zero de-energizes the resolver.
- Bit 5 "Resolver Dir" determines counting direction. If clear, direction is forward or up. If set, the direction is reverse or down.
- Bit 9 "Edge Time" configures the method of sampling used by the Velocity Position Loop (VPL). Setting the bit chooses "Edge to Edge" sampling, while resetting the bit to zero chooses "Simple Difference" sampling. "Simple Difference" sampling calculates speed by examining the difference between pulse counts over a fixed sample time. "Edge to Edge" sampling adjusts the sample time to synchronize with the position count updates from the daughter card - improving the accuracy of the speed calculation.
- Bits 10 "SmplRate bt0" through 12 "SmplRate bt2" configure the Finite Impulse Response (FIR) Filter (see [Table 268D: FIR Filter Settings](#)). This setting reduces the effect of noisy feedback on the system. Refer to the Speed/Position Feedback section of the *PowerFlex® 700S with Phase II Control Reference Manual*, publication PFLEX-RM003 for details.

Note: Bit 11 "SmplRate bt0" is set to 0 = False by default for firmware version 1.11 and bit 11 "SmplRate1" is set to 1 = True by default for firmware version 2.003.

**269 Resolver0 Status**

Indicates status of the resolver option card port 0.

- Bit 0 "Cable Tune"
- Bit 1 "Tune Result" indicates the tuning Parameter type. When set, it indicates the tuning is using the parameter database. When cleared, it indicates the tuning is using derived data.
- Bit 2 "Mtr Turning" indicates that the motor is turning.
- Bit 4 "Energized" indicates the resolver is energized.
- Bit 8 "Open Wire" indicates a problem with the cable (open circuit).
- Bit 9 "Power Supply" indicates problem with the option card's power supply.
- Bit 10 "Diag Fail" indicates the option card has failed its power-up diagnostics.

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																																																																		
299	<b>Elapsed MWHrs</b> Displays the total energy the drive has consumed or produced. Calculated from the absolute magnitude of the product of motor speed and motor torque (power), accumulated over time. This value will increase in both regen and motoring modes of operation. This parameter value can be changed (written to) by the user.	Default: Min/Max: Units: Scale:	0.0 0.0/429496736.0 MWhr x 10		RW	32-bit Integer																																																																																																		
300	<b>Motor Spd Fdbk</b> Displays measured motor speed information from the selected feedback device.	Default: Min/Max: Units: Scale:	0.0000 -/+14112.0000 rpm <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real																																																																																																		
301	<b>Motor Speed Ref</b> Displays the speed reference value, after the limit function. This is the input to the error calculator and speed regulator.	Default: Min/Max: Units: Scale:	0.0000 -/+14112.0000 rpm <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real																																																																																																		
302	<b>Spd Reg PI Out</b> Displays the output of the speed regulator. This is the input to torque control. A value of 1.0 represents base torque of the motor.	Default: Min/Max: Units:	0.0000 -/+8.0000 P.U. P.U.		RO	Real																																																																																																		
303	<b>Motor Torque Ref</b> Displays the reference value of motor torque. The actual value of the motor torque is within 5% of this value.	Default: Min/Max: Units:	0.0000 -/+8.0000 P.U. P.U.		RO	Real																																																																																																		
304	<b>Limit Status</b> Displays the limit status of conditions that may be limiting the current reference or torque reference. <ul style="list-style-type: none"><li>• Bit 0 "+MCS Iq Lim" indicates that torque producing current is at its positive limit.</li><li>• Bit 1 "+MCS Ws Lim" indicates that flux producing torque is at its positive limit.</li><li>• Bit 2 "0 Ia from +" indicates that torque producing current is limited to zero from the positive direction - refer to <a href="#">Par 353</a> [Iq Actual Lim].</li><li>• Bit 3 "+Iq Calc" indicates the calculation for torque producing current has reached its positive limit.</li><li>• Bit 4 "+Current Lim" indicates that the current reference has reached the positive Motor Current Limit set by <a href="#">Par 356</a> [Mtr Current Lim].</li><li>• Bit 5 "+DriveProtOL" indicates that the current reference has reached the positive current limit set by the Open Loop Inverter Overload, shown in <a href="#">Par 343</a> [OL OpnLp CurrLim].</li><li>• Bit 6 "+DriveProtCL" indicates that the current reference has reached the positive current limit set by the Closed Loop Inverter Overload, shown in <a href="#">Par 344</a> [OL ClsLp CurrLim].</li><li>• Bit 8 "+Torq Limit" indicates that the torque reference has reached the Positive Torque Limit set by <a href="#">Par 125</a> [Torque Pos Limit].</li><li>• Bit 9 "Mtrng PwrLim" indicates that the torque reference is being limited by the Motoring Power Limit set by <a href="#">Par 127</a> [Mtrng Power Lim].</li><li>• Bit 10 "+Torq CurLim" indicates that current reference has reached the Actual Torque Producing Current Limit set by <a href="#">Par 353</a> [Iq Actual Lim].</li><li>• Bit 11 "Atune Tq Lim" indicates that the torque reference is being limited by <a href="#">Par 129</a> [Atune Trq Ref].</li><li>• Bit 12 "+0 Torq Ena" indicates that the torque reference is limited to zero because <a href="#">Par 157</a> [Logic Ctrl State] bit 9 "Torq Ref En" is off.</li><li>• Bit 13 "+0 Curr Ena" indicates that the current reference is limited to zero because <a href="#">Par 157</a> [Logic Ctrl State] bit 11 "CurrRef En" is off.</li><li>• Bit 14 "Speed Limit" indicates the collective status of all speed limitations.</li><li>• Bit 15 "Current Lim" indicates the collective status of all current limitations</li><li>• Bit 16 "-MCS Iq Lim" indicates that torque producing current is at its negative limit.</li><li>• Bit 17 "-MCS Ws Lim" indicates that flux producing torque is at its negative limit.</li><li>• Bit 18 "0 Ia from -" indicates that torque producing current is limited to zero from the negative direction - refer to <a href="#">Par 353</a> [Iq Actual Lim].</li><li>• Bit 19 "-Iq Calc" indicates the calculation for torque producing current has reached its negative limit.</li><li>• Bit 20 "-Current Lim" indicates that the current reference has reached the negative Motor Current Limit set by <a href="#">Par 356</a> [Mtr Current Lim].</li><li>• Bit 21 "-DriveProtOL" indicates that the current reference has reached the negative current limit set by the Open Loop Inverter Overload, shown in <a href="#">Par 343</a> [OL OpnLp CurrLim].</li><li>• Bit 22 "-DriveProtCL" indicates that the current reference has reached the negative current limit set by the Closed Loop Inverter Overload, shown in <a href="#">Par 344</a> [OL ClsLp CurrLim].</li><li>• Bit 24 "-Torq Limit" indicates that the torque reference has reached the Negative Torque Limit set by <a href="#">Par 126</a> [Torque Neg Limit].</li><li>• Bit 25 "Regen PwrLim" indicates that the torque reference is being limited by the Regenerative Power Limit set by <a href="#">Par 128</a> [Regen Power Lim].</li><li>• Bit 26 "-Torq CurLim" indicates that current reference has reached the Actual Torque Producing Current Limit set by <a href="#">Par 353</a> [Iq Actual Lim].</li><li>• Bit 27 "Bus Reg Tq Lim" indicates the bus voltage regulator is active and limiting the regenerative torque.</li><li>• Bit 28 "-0 Torq Ena" indicates that the torque reference is limited to zero because <a href="#">Par 157</a> [Logic Ctrl State] bit 9 "Torq Ref En" is off.</li><li>• Bit 29 "-0 Curr Ena" indicates that the current reference is limited to zero because <a href="#">Par 157</a> [Logic Ctrl State] bit 11 "CurrRef En" is off.</li><li>• Bit 30 "Torque Limit" indicates the collective status of all torque limitations.</li><li>• Bit 31 "Power Limit" indicates the collective status of all power limitations.</li></ul> <div><div>Options</div><table><tr><th></th><th>Power Limit</th><th>Torque Limit</th><th>-0 Curr Enbl</th><th>-0 Trq Enbl</th><th>Bus Reg Lim</th><th>-Trq CurLim</th><th>Regen PwrLim</th><th>-Trq Limit</th><th>SpdReg Open</th><th>-DriveProtCL</th><th>-DriveProtOL</th><th>-Current Lim</th><th>-Iq Calc</th><th>0 Ia from -</th><th>-MCS Ws Lim</th><th>-MCS Iq Lim</th><th>Current Lim</th><th>Speed Limit</th><th>+0 Curr Enbl</th><th>+0 Trq Enbl</th><th>Atune Trq Lim</th><th>+Trq CurLim</th><th>Mtrng PwrLim</th><th>+Trq Limit</th><th>+SpdReg Open</th><th>+DriveProtCL</th><th>+DriveProtOL</th><th>+Current Lim</th><th>+Iq Calc</th><th>0 Ia from +</th><th>+MCS Ws Lim</th><th>+MCS Iq Lim</th></tr><tr><td>Default</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>31</td><td>30</td><td>29</td><td>28</td><td>27</td><td>26</td><td>25</td><td>24</td><td>23</td><td>22</td><td>21</td><td>20</td><td>19</td><td>18</td><td>17</td><td>16</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table><div>0 = False 1 = True</div></div>							Power Limit	Torque Limit	-0 Curr Enbl	-0 Trq Enbl	Bus Reg Lim	-Trq CurLim	Regen PwrLim	-Trq Limit	SpdReg Open	-DriveProtCL	-DriveProtOL	-Current Lim	-Iq Calc	0 Ia from -	-MCS Ws Lim	-MCS Iq Lim	Current Lim	Speed Limit	+0 Curr Enbl	+0 Trq Enbl	Atune Trq Lim	+Trq CurLim	Mtrng PwrLim	+Trq Limit	+SpdReg Open	+DriveProtCL	+DriveProtOL	+Current Lim	+Iq Calc	0 Ia from +	+MCS Ws Lim	+MCS Iq Lim	Default	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	Bit	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

305	<b>Mtr Trq Curr Ref</b> Displays the torque current reference present at the output of the current rate limiter. 100% is equal to 1 per unit (P.U.) rated motor torque.	Default: Min/Max: Units:	0.0000 -/+8.0000 P.U. P.U.		RO	Real																																																																																																		
306	<b>DC Bus Voltage</b> Displays measured bus voltage. Note: The maximum value was increased from 1000.0000 to 1170.0000 for firmware version 3.001.	Default: Min/Max: Units:	0.0000 0.0000/1170.0000 V		RO	Real																																																																																																		
307	<b>Output Voltage</b> Displays RMS line-to-line fundamental motor voltage. This data is averaged and updated every 50 milliseconds.	Default: Min/Max: Units:	0.00 0.00/3000.00 V		RO	Real																																																																																																		
308	<b>Output Current</b> Displays measured RMS motor current.	Default: Min/Max: Units:	0.00 0.00/10000.00 A		RO	Real																																																																																																		

No.	Name Description	Values		Linkable	Read-Write	Data Type																												
309	<b>% Motor Flux</b> Displays the motor flux in % of nominal.	Default: Min/Max: Units: Scale:	0.0 0.0/100.0 % 100 = 4096		RO	16-bit Integer																												
310	<b>Output Freq</b> Displays the motor stator frequency.	Default: Min/Max: Units:	0.00 -/+250.00 Hz		RO	Real																												
311	<b>Output Power</b> Motor Power is the calculated product of the torque reference and motor speed feedback. A 125ms filter is applied to this result. Positive values indicate motoring power; negative values indicate regenerative power. Note: The units were changed from kW to Hp for firmware version 2.003.	Default: Min/Max: Units:	0.00 -/+9999.00 Hp		RO	Real																												
312	<b>MotorFluxCurr FB</b> Displays the measured per unit motor flux producing current.	Default: Min/Max: Units:	0.0000 0.0000/1.0000 P.U.		RO	Real																												
313	<b>Heatsink Temp</b> Displays the measured temperature of the drive's heatsink.	Default: Min/Max: Units:	0.0000 -30.0000/200.0000 °C		RO	Real																												
314	<b>VPL Firmware Rev</b> Displays the major and minor revision levels of the drive's Velocity Position Loop (VPL) software. Notes: The default value was changed from 1.11 to 2.003 for firmware version 2.003. The default value was changed from 2.003 to 3.001 for firmware version 3.001. Changed all values to three decimal places for firmware version 4.001.	Default: Min/Max: Scale:	1.003 0.001/99.999 000		RO	16-bit Integer																												
315	<b>VPL Build Number</b> Displays the build number of the drive's Velocity Position Loop (VPL) software. Note: The default value was changed from 8001 to 1 for firmware version 2.003.	Default: Min/Max:	1 1/10000		RO	16-bit Integer																												
316	<b>SynchLink Status</b> Indicates status of SynchLink functions. <ul style="list-style-type: none"><li>• Bit 0 “FB Opt Prsnt” indicates the presence of an optional feedback daughter card.</li><li>• Bit 1 “Encdr0 Prsnt” indicates the presence of encoder 0.</li><li>• Bit 2 “Encdr1 Prsnt” indicates the presence of encoder 1.</li><li>• Bit 3 “In Sync” indicates SynchLink communications is synchronized.</li><li>• Bit 4 “Tx Active” indicates TX frames are being transmitted downstream from this node.</li><li>• Bit 5 “Rx Active” indicates RX frames are being received from nodes upstream.</li><li>• Bit 15 “Rx Data Enbl” indicates received data is being updated.</li></ul> Note: Bit 8 “Open Wire” was changed to “Reserved”, and bit 12 “SOB Present” and bit 14 “Reset Req'd” were added for firmware 2.004. Refer to the <i>SynchLink System Design Guide</i> , publication 1756-TD008, for more information.

0 = False  
1 = True

328

Alarm Status 3

Indicates the occurrence of exception events that have been configured as alarm conditions. These events are from [Par 322](#) [Exception Event3].

- Bit 11 “HH HW Ver” indicates a non-configurable High Horsepower hardware version fault.
- Bit 12 “HH CurUnblnc” indicates a non-configurable High Horsepower output current unbalanced fault.
- Bit 13 “HH VltUnblnc” indicates a non-configurable High Horsepower Bus voltage unbalanced fault.
- Bit 14 “HH Bus Data” indicates when Communication Bus data are mismatched between left side unit and right side unit.
- Bit 21 “Drive Homing” when the drive is in “Drive Homing” mode (parameter [Par 740](#) [Position Control] bit 24 “Find Home” or bit 27 “Return Home” is set to “1”) this alarm is triggered and the drive moves to a home position automatically.
- Bit 24 “Drv Waking” when set, the drive is in wake mode and could start at any time.
- Bit 28 “+/- 12v Pwr” identifies when the 12V dc control voltage is outside the tolerance range. The positive voltage power exceeds +15.50 V dc and the negative voltage power exceeds -15.50V DC.
- Bit 29 “AnlgIn1 Loss” indicates a non-configurable Analog Input 1 loss fault.
- Bit 30 “AnlgIn2 Loss” indicates a non-configurable Analog Input 2 loss fault.
- Bit 31 “AnlgIn3 Loss” indicates a non-configurable Analog Input 3 loss fault.

Notes: Bits 16, 20 and 23 were added for firmware version 2.004. Bits 11, 12, 13, 29, 30 and 31 were added for firmware version 3.001. Changed bit 21 to “Drive Homing” and bit 28 to “+/- 12v Pwr” for firmware version 3.003. Bit 14 “HH Bus Data” was added for firmware version 3.004. Bit 24 “Drv Waking” and 27 “RideThruAlrm” were added for firmware version 5.002.

Options	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	+/- 12v Pwr	RideThruAlrm	Reserved	Reserved	Drv Waking	Stall Optics	Reserved	Drive Homing	Posit Err	Hrd Ovrtrl	Hrd Ovrtrl	-5ft Ovrtrl	+5ft Ovrtrl	Reserved	HH Bus Data	HH VltUnblnc	HH CurrUnblnc	HH HW Ver	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	NonCnfg Fault	HH InPhases

0 = False  
1 = True

329

Fault TP Sel

Enter or write a value to select Fault data displayed in [Par 330](#) [Fault TP Data].

- 24 “ElpsSec.mSec” = Elapsed time in seconds and milliseconds since the last power up
- 25 “ElpsMin.Sec” = Elapsed time in minutes and seconds since the last power up
- 26 “ElpsHour.Min” = Elapsed time in hours and minutes since the last power up
- 27 “ElpsDay.Hour” = Elapsed time in days and hours since the last power up

Note: Values 24 - 27 were added for firmware version 4.002.

Default:

Options:

0 = “Zero”  
0 = “Zero”  
1 = “Abs OverSpd”  
2 = “EE Pwr State”  
3 = “Inv DataStat”  
4 = “Run Time Err”  
5 = “LowBus Thres”  
6 = “LowBus Detct”  
7 = “PwrLosBusVlt”  
8 = “MCPLosBusVlt”  
9 = “MC Flt Reset”  
10 = “Ext Flt Stat”  
11 = “VPL TaskErr”  
12 = “Mtr OL Input”  
13 = “Mtr OL Outpt”

14 = “MtrStallTime”  
15 = “MC Handshake”  
16 = “VPL Handshak”  
17 = “MC Diag”  
18 = “PwrLossState”  
19 = “12 volt loss”  
20 = “PwrEE Chksum”  
21 = “Db Read Cnt1”  
22 = “Db Read Cnt2”

24 = “ElpsSec.mSec”  
25 = “Elps Min.Sec”  
26 = “ElpsHour.Min”  
27 = “ElpsDay.Hour”

330

Fault TP Data

Displays the data selected by [Par 329](#) [Fault TP Sel].

Default:

Min/Max:

0  
-/+2200000000

RO

Real

331

LstFaultStopMode

Displays the action taken by the drive during the last fault. When a fault occurs, an action is taken as a result of that fault.

Default:

Options:

0 = “Ignore”  
0 = “Ignore”  
1 = “Alarm”  
2 = “FltCoastStop”

3 = “Flt RampStop”  
4 = “FltCurLimStop”

335	<b>Abs OverSpd Lim</b>  Sets an incremental speed above <a href="#">Par 76</a> [Fwd Speed Limit] and below <a href="#">Par 75</a> [Rev Speed Limit] that is allowable before the drive indicates its speed is out of range.	Default: 352.8000 Min/Max: 0.0000/1750.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RW	Real																																																																																															
336	<b>Motor OL Factor</b>  Sets the minimum level of current that causes a motor overload trip under continuous operation. Current levels below this value will not result in an overload trip. For example, a service factor of 1.15 implies continuous operation up to 115% of nameplate motor current.	Default: 1.1500 Min/Max: 1.0000/2.0000 Units: P.U.		RW	Real																																																																																															
337	<b>Mtr I2T Curr Min</b>  Sets the minimum current threshold for the motor overload (I <sup>2</sup> T) function. The value indicates minimum current at the minimum speed, <a href="#">Par 338</a> [Mtr I2T Spd Min], and these are the first current/speed breakpoint. From this point the current threshold is linear to the value specified by <a href="#">Par 336</a> [Motor OL Factor].	Default: 0.5000 Min/Max: 0.0500/2.0000 Units: P.U.		RW	Real																																																																																															
338	<b>Mtr I2T Spd Min</b>  Sets the minimum speed for the motor overload (I <sup>2</sup> T) function. The value indicates minimum speed below the minimum current threshold <a href="#">Par 337</a> [Mtr I2T Curr Min], and these are the first current/speed breakpoint. From this point the current threshold is linear to the value specified by the motor service factor <a href="#">Par 336</a> [Motor OL Factor]. Set this parameter to the minimum value for the motor overload trip to vary in time at low speeds. For more information, please see Motor Overload on page <a href="#">166</a> .	Default: 1.0000 Min/Max: 0.0500/1.0000 Units: P.U.		RW	Real																																																																																															
339	<b>Mtr I2T Calibrat</b>  Sets the current calibration level for the motor overload (I <sup>2</sup> T) function. The value indicates the current level that the drive will fault at this current in 60 seconds.	Default: 2.0000 Min/Max: 1.1000/4.0000 Units: P.U.		RW	Real																																																																																															
340	<b>Mtr I2T Trp ThrH</b> Displays the trip threshold current for the motor overload (I <sup>2</sup> T) function. The value depends on the motor speed, and is calculated from the minimum current <a href="#">Par 337</a> [Mtr I2T Curr Min], the minimum speed <a href="#">Par 338</a> [Mtr I2T Spd Min] and the motor service factor <a href="#">Par 336</a> [Motor OL Factor].	Default: 1.1500 Min/Max: 0.0500/2.0000 Units: P.U.		RO	Real																																																																																															
341	<b>Mtr I2T Count</b> The accumulator for Motor Overload detection (Motor I <sup>2</sup> T function). When the motor runs at the over rated motor current, the accumulator starts counting up. If the motor runs at below rated motor current, the accumulator counts down. If the value of this parameter exceeds 0.5, the “Motor OLoad Pend” alarm (fault 12) occurs. If the value of this parameter exceeds 1.0, the “Motor OLoad Trip” fault (fault 11) occurs. The value of this parameter is saved in non-volatile memory after power-down if <a href="#">Par 153</a> [Control Options], bit 20 “Motor OL Ret” is on. Toggling bit 20 of <a href="#">Par 153</a> [Control Options] clears the value of this parameter.  Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: 0.0/1.5		RO	Real																																																																																															

Note: This parameter was added for firmware version 3.001.

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																		
343	<b>OL OpnLp CurrLim</b> Displays the current limit set by the Open Loop Inverter Overload (OL) function. This function sets this current limit based on stator current feedback and the current ratings of the drive - continuous and short term (three-second rating). Typically the drive will have a sixty-second rating of 110% of continuous current and a three-second rating at 150% of the continuous. Under normal operating conditions, the open loop function sets this current limit to the short term (three-second) rating. If the function detects an overload, it lowers the limit to the continuous level. After a period of time (typically one to three minutes), the function returns the limit to the short term rating.	Default: 8.0000 Min/Max: 0.0000/8.0000 Units: P.U.		RO	Real																																																		
344	<b>OL ClsLp CurrLim</b> Displays the current limit set by the Closed Loop Inverter Overload (OL) function. This function will set a current limit level based on the values in <a href="#">Par 355</a> [Iq Ref Limited], <a href="#">Par 313</a> [Heatsink Temp] and the thermal characteristics of the drive. Under normal operating conditions, the function typically sets the limit at 250% of the continuous drive rating. If the function determines that the power device junction temperature is approaching maximum, it will reduce this limit to the level required to prevent additional heating of the inverter. This level could be as low as the continuous rating of the drive. If the inverter temperature decreases, the function will raise the limit to a higher level. Disable this protection by setting bit 13 "OL ClsLpDsbl" of <a href="#">Par 153</a> [Control Options].	Default: 8.0000 Min/Max: 0.0000/8.0000 Units: P.U.		RO	Real																																																		
345	<b>Drive OL JnctTm</b> Displays the calculated junction temperature of the power semiconductors in the inverter. The calculation uses the values of <a href="#">Par 313</a> [Heatsink Temp], <a href="#">Par 355</a> [Iq Ref Limited], and inverter thermal characteristics contained in the power EE memory. If this value exceeds the maximum junction temperature (visible in <a href="#">Par 348</a> [Drive OL TP Data] when <a href="#">Par 347</a> [Drive OL TP Sel] option 12 "fJunTmPrMax" is selected), two faults occur: Inverter Overtemperature Fault (fault code 15), and Junction Overtemperature Fault - indicated by bit 7 "Jnc OverTemp" of <a href="#">Par 346</a> [Drive OL Status].	Default: 0.0000 Min/Max: -50.0000/300.0000 Units: °C		RO	Real																																																		
346	<b>Drive OL Status</b> Indicates the status of various overload (OL) conditions. <ul style="list-style-type: none"><li>Bit 0 "NTC Shorted" indicates the Negative Temperature Coefficient (NTC) device has a short circuit.</li><li>Bit 1 "NTC Open" indicates the NTC has an open circuit.</li><li>Bit 2 "HS OverTemp" indicates heatsink temperature is above 105 °C for ratings 1.1...11.0 A, 115 °C for 14...34 A, 100 °C for 40...52 A.</li><li>Bit 3 "HS Pending" indicates heatsink temperature is above 95C for ratings 1.1...11 A, 105 °C for 14...34 A, 90 °C for 40...52 A.</li><li>Bit 4 "IT Trip" indicates the drive has exceed the 3 second rating of either the 150% normal duty rating or 200% of the heavy duty rating.</li><li>Bit 5 "IT Pending" indicates the drive OL integrator is at 50% of the time out time.</li><li>Bit 6 "IT Foldback" indicates the drive closed loop current limit is in a fold back condition. The value of the fold back is proportional to the calculated junction temperature.</li><li>Bit 7 "Jnc Over Temp" indicates the junction temperature has exceeded the maximum temperature for the power semiconductor device.</li></ul> <table><tr><td>Options</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Jnc OverTemp</td><td>IT Foldback</td><td>IT Pending</td><td>IT Trip</td><td>HS Pending</td><td>HS OverTemp</td><td>NTC Open</td><td>NTC Shorted</td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>	Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Jnc OverTemp	IT Foldback	IT Pending	IT Trip	HS Pending	HS OverTemp	NTC Open	NTC Shorted	Default	x	x	x	x	x	x	x	x	0	0	0	0	0	0	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

348	<b>Drive OL TP Data</b> Displays the value selected by <a href="#">Par 347</a> [Drive OL TP Sel].	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real																																																		
350	<b>Iq Actual Ref</b> Displays the value of motor current reference that is present at the output of the divide by flux calculation.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real																																																		

No.	Name Description	Values	Linkable	Read-Write	Data Type
351	<b>Iq Ref Trim</b> Provides an external source to command, trim or offset the internal motor current reference. This value is summed with <a href="#">Par 350</a> [Iq Actl Ref] before the current limit is applied. Scaling is in per unit motor current.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.	Y	RW	Real
352	<b>Is Actual Lim</b> Displays the largest allowable stator motor current. The range of allowable motor current is limited by the maximum drive current. Scaling is in per unit motor current.	Default: 1.0000 Min/Max: 0.0000/8.0000 Units: P.U.		RO	Real
353	<b>Iq Actual Lim</b> Displays the largest allowable torque producing (Iq) motor current. The range of allowable Iq motor current is limited by the maximum drive current and is adjusted by the motor flux current. Scaling is in per unit Iq motor current.	Default: 1.0000 Min/Max: 0.0000/8.0000 Units: P.U.		RO	Real
354	<b>Iq Rate Limit</b> Enter the maximum rate of change for Current Reference, in per unit current / sec. <a href="#">Par 90</a> [Spd Reg BW] will be limited to 2/3 of this value.	Default: 1000.0000 Min/Max: 5.0000/10000.0000 Units: /s	Y	RW	Real
355	<b>Iq Ref Limited</b> Displays the current reference output of the rate limiter.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
356	<b>Mtr Current Lim</b> Sets the largest allowable motor stator current. The online maximum value of this parameter is <a href="#">Par 2</a> [Motor NP FLA]. The online minimum value is 105% of the current indicated in <a href="#">Par 488</a> [Flux Current].	Default: 1.5000 Min/Max: 0.0000/Calculated Units: P.U.	Y	RW	Real
357	<b>Curr Ref TP Sel</b> Enter or write a value to select current reference data displayed in <a href="#">Par 358</a> [Curr Ref TP Data]. Note: Added values 20...52 for firmware version 3.003. Added value 53 for firmware version 4.001.	Default: 0 = "Zero" Options: 0 = "Zero" 1 = "Iq Sum" 2 = "Iq Lim In" 3 = "Iq Lim Out" 4 = "Iq Rate Stat" 5 = "IqLmOutNoFil" 6 = "MtrCrLimStat" 7 = "Lim'dMtrCrLm" 8 = "Iq Act Limit" 9 = "Iq Cal Gain" 10 = "Min Lim Stat" 11 = "Iq Prescale" 12 = "IqtoIs Stat" 13 = "Flux Status" 14 = "Flux LPF Out" 15 = "Is Per Unit" 16 = "Iq Actl +Lim" 17 = "Iq Actl -Lim" 18 = "Flx Filt Hld" 19 = "Inverse Flux" 20 = "Impedance P.U." 21 = "ImpedanceOhm" 22 = "Rated We" 23 = "Leak Induct" 24 = "Rated Torque" 25 = "Rated Ids" 26 = "Rated Iqs" 27 = "Rated Vds" 28 = "Rated Vqs" 29 = "RatedLamdVds" 30 = "RatedLamdIds" 31 = "RatedLamd ds" 32 = "RatedLamd qs" 33 = "Iqs" 34 = "Ids" 35 = "Vqs" 36 = "Vds" 37 = "We" 38 = "Torque" 39 = "Torque Filtr" 40 = "Lamda Ids" 41 = "Lamda Iqs" 42 = "Lamda Vds" 43 = "Lamda Vqs" 44 = "Lamda ds" 45 = "Lamda qs" 46 = "Lamda ds Flt" 47 = "Lamda qs Flt" 48 = "Torque Ref" 49 = "Iq Reference" 50 = "1/Motor Pole" 51 = "1/Rated Iqs" 52 = "1/Rated Torq" 53 = "Rs Temp Coef"			
358	<b>Curr Ref TP Data</b> Sets the limit value for the motor torque producing current.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
359	<b>Motor Flux Est</b> The Q-axis motor voltage is divided by the motor frequency while field weakening is active. This value is used to convert the torque command to a motor current (Iqs) command.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
360	<b>Min Flux</b> Sets the smallest level of flux used to convert <a href="#">Par 303</a> [Motor Torque Ref] to a current reference above base speed. Note: Changed the minimum value from "0.2500" to "0.1000" for firmware version 4.001.	Default: 0.2500 Min/Max: 0.1000/1.0000 Units: P.U.	Y	RW	Real
361	<b>Flx LpassFilt BW</b> Sets the bandwidth of the low pass filter that adjusts the response of the flux estimate used in the torque to current conversion. Since the field time constant varies between motors, a better control response may be obtained by adjusting the filter time constant. Normally this parameter is not changed unless a significant disturbance occurs as the motor enters field weakening AND <a href="#">Par 360</a> [Min Flux] is less than 1 per unit.	Default: 12.0000 Min/Max: 0.5000/100.0000 Units: rad/s	Y	RW	Real
362 <b>A</b>	<b>Current Limit Gain</b> Sets the responsiveness of the current limit. This parameter should not be changed by the user. Note: This parameter was added for firmware version 2.003.	Default: 250 Min/Max: 0/10000		RW	16-bit Integer
363 <b>A</b>	<b>Ki Current Limit</b> Current Limit Integral gain. This gain is applied to the current limit error signal to eliminate steady state current limit error. A larger value increases overshoot during a step of motor current/load. This parameter should not be changed by the user. Note: This parameter was added for firmware version 2.003.	Default: 1500 Min/Max: 0/10000		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
364 <b>A</b>	<b>Kd Current Limit</b> Current Limit Derivative gain. This gain is applied to the sensed motor current to anticipate a current limit condition. A larger value reduces overshoot of the current relative to the current limit value. This parameter should not be changed by the user. Note: This parameter was added for firmware version 2.003.	Default: 500 Min/Max: 0/10000		RW	16-bit Integer
365 366 367	<b>Fdbk LsCnfg Pri</b> <b>Fdbk LsCnfg Alt</b> <b>Fdbk LsCnfgPosit</b> Enter a value to configure the drive's response to an Encoder 0/1 Loss exception event. <ul style="list-style-type: none"> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Default: 1 = "Alarm" Default: 1 = "Alarm" Options: 1 = "Alarm" 2 = "FltCoastStop"			
368	<b>Cnv NotLogin Cfg</b> Configures the 700L drive's response when the active convertor is not logged-in via a DPI port. Note: This parameter was added for firmware version 3.001.	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop"			
369	<b>Brake OL Cnfg</b> Enter a value to configure the drive's response to a Brake Overload (OL) Trip exception event. This event is triggered when a Dynamic Brake (DB) overload condition occurs. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
370	<b>HiHp InPhsLs Cfg</b> Selector for the input phase loss configuration. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit in response to this event.</li> </ul> Notes: The default value was changed from 1 "Alarm" to 3 "Flt RampStop" for firmware version 3.001. The default value was changed from 3 to 2 for firmware version 4.002.	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
371	<b>Mtr OL Trip Cnfg</b> Enter a value to configure the drive's response to a Motor Overload (OL) Trip exception event. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
372	<b>Mtr OL Pend Cnfg</b> Enter a value to configure the drive's response to a Motor Overload (OL) Pending exception event. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
373	<b>Motor Stall Time</b> Enter a value to specify the time delay between when the drive detects a Motor Stall condition and when it declares the exception event.	Default: 1.0000 Min/Max: 0.1000/3000.0000 Units: s	Y	RW	Real
374	<b>Motor Stall Cnfg</b> Enter a value to configure the drive's response to a Motor Stall exception event. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 0 = "Ignore" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			

No.	Name Description	Values	Linkable	Read-Write	Data Type
375	<b>Inv OT Pend Cnfg</b> Enter a value to configure the drive's response to a Inverter Over-Temperature (OT) Pending exception event. This event is triggered when the Inverter Negative Temperature Coefficient (NTC) function detects the heat-sink temperature reaches to the overload warning level. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
376	<b>Inv OL Pend Cnfg</b> Enter a value to configure the drive's response to an Inverter Overload (OL) Pending exception event. This event is triggered when one of the Inverter Protection Current-Over-Time functions (Open Loop or Closed Loop) detects current and temperature at warning levels. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
377	<b>Inv OL Trip Cnfg</b> Enter a value to configure the drive's response to an Inverter Overload (OL) Trip exception event. This event is triggered when one of the Inverter Protection Current-Over-Time functions (Open Loop or Closed Loop) detects current and temperature at a fault level. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop"			
378	<b>Interp Flt Cnfg</b> Enter a value to configure the drive's response to a position interpolator exception event. If the interpolator loses the synchronization pulse or is out of synch, this event occurs.	Default: 1 = "Alarm" Options: 0 = "Ignore" 3 = "Flt RampStop" 1 = "Alarm" 4 = "FltCurLimStp" 2 = "FltCoastStop"			
379	<b>Ext Flt/Aim Cnfg</b> Enter a value to configure the drive's response to an External Input exception event. The event is triggered by a digital input that is configured for auxiliary fault or auxiliary aux fault by selecting 3 "Ext Fault" or 38 "ExtFault Inv" in <a href="#">Par 825</a> [DigIn 1 Sel], <a href="#">Par 826</a> [DigIn 2 Sel] or <a href="#">Par 827</a> [DigIn 3 Sel]. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
381	<b>PreChrg Err Cnfg</b> Enter a value to configure the drive's response to a Precharge Error exception event. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event</li> </ul>	Default: 2 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop"			
382	<b>MC Cmd Lim Cnfg</b> Enter a value to configure the drive's response to a Motor-Controller (MC) Command Limitation exception event. This event is triggered when the motor-controller detects limit of the command values used in the motor-controller, and returns the exception event to the Velocity Position Loop (VPL). <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop"			

No.	Name Description	Values	Linkable	Read-Write	Data Type
383	<b>SL CommLoss Data</b> Enter a value to determine what is done with the data received from SynchLink when a communication loss occurs. Refer to <a href="#">Par 902</a> [SL Error Status] for possible causes of communication loss. <ul style="list-style-type: none"> <li>0 - Zero Data Resets data to zero.</li> <li>1 - Last State Holds data in its last state.</li> </ul>	Default: 1 = "Last State" Options: 0 = "Zero Data" 1 = "Last State"			
	 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 383</a> [SL CommLoss Data] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive to hold the data in its last state. You can set this parameter so that the drive resets the data to zero. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.				
384	<b>SL CommLoss Cnfg</b> Enter a value to configure the drive's response to SynchLink communication loss. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
	 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 384</a> [SL CommLoss Cnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.				
385	<b>Lgx CommLossData</b> Enter a value to configure what the drive does with the data received from the DriveLogix controller when the connection is closed or times out. <ul style="list-style-type: none"> <li>0 - Zero Data Resets data to zero.</li> <li>1 - Last State Holds data in its last state.</li> </ul>	Default: 1 = "Last State" Options: 0 = "Zero Data" 1 = "Last State"			
	 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 385</a> [Lgx CommLossData] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive to hold the data in its last state. You can set this parameter so that the drive resets the data to zero. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.				
386	<b>Lgx OutOfRunCnfg</b> Enter a value to configure the drive's response to the DriveLogix processor being in a "Non-Run" mode. Non-Run modes include Program, Remote-Program and Faulted. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
	 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 386</a> [Lgx OutOfRunCnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.				

No.	Name Description	Values	Linkable	Read-Write	Data Type
387	<b>Lgx Timeout Cnfg</b> Enter a value to configure the drive's response to a "Controller-to-Drive" connection timeout, as detected by the drive. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 387</a> [Lgx Timeout Cnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					
388	<b>Lgx Closed Cnfg</b> Enter a value to configure the drive's response to the controller closing the "Controller-to-Drive" connection. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 388</a> [Lgx Closed Cnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					
389	<b>Lgx LinkChngCnfg</b> Enter a value to configure the drive's response to "Controller-to-Drive" default links being removed. A default link is a link automatically set up when a communication format is selected for the Controller to Drive connection. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 389</a> [Lgx LinkChngCnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					

No.	Name Description	Values	Linkable	Read-Write	Data Type
390	<b>SL MultErr Cnfg</b> Enter a value to configure the Drive Module's response to a SynchLink Multiplier error. Refer to <a href="#">Par 927</a> [SL Mult State] for possible causes for multiplier errors. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 390</a> [SL MultErr Cnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					
391	<b>DPI CommLoss Cfg</b> Enter a value to configure the drive's response to the failure of a DPI port. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 391</a> [DPI CommLoss Cfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					
392	<b>NetLoss DPI Cnfg</b> Enter a value to configure the drive's response to a communication fault from a network card at a DPI port. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
 <b>ATTENTION:</b> Risk of injury or equipment damage exists. <a href="#">Par 392</a> [NetLoss DPI Cnfg] lets you determine the action of the drive if communications are disrupted. By default this parameter causes the drive fault and coast to a stop. You can set this parameter so that the drive continues to run. Precautions should be taken to ensure that the setting of this parameter does not create hazards of injury or equipment damage.					
393	<b>BusUndervoltCnfg</b> Enter a value to configure the drive's response to the DC Bus voltage falling below the minimum value. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
394	<b>VoltFdbkLossCnfg</b> Enter a value to configure the drive's response to a communication error between Motor Control (MC) and the motor voltage feedback board. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 2 = "FltCoastStop" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop"			

No.	Name Description	Values	Linkable	Read-Write	Data Type
395	<b>+Sft OvrTrvlCnfg</b> Enter a value to configure the drive's response to a positive software positioning over travel condition. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
396	<b>-Sft OvrTrvlCnfg</b> Enter a value to configure the drive's response to a negative software positioning over travel condition. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
397	<b>+Hrd OvrTrvlCnfg</b> Enter a value to configure the drive's response to a positive hardware positioning over travel condition. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
398	<b>-Hrd OvrTrvlCnfg</b> Enter a value to configure the drive's response to a negative hardware positioning over travel condition. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
399	<b>Position ErrCnfg</b> Enter a value to configure the drive's response to a position error condition. <ul style="list-style-type: none"> <li>0 - Ignore configures the drive to continue running, as normal, when this event occurs.</li> <li>1 - Alarm configures the drive to continue running and set the appropriate alarm bit when this event occurs.</li> <li>2 - FltCoastStop configures the drive to perform a coast stop and set the appropriate fault bit, in response to this event.</li> <li>3 - Flt RampStop configures the drive to perform a ramp stop and set the appropriate fault bit, in response to this event.</li> <li>4 - FltCurLimStp configures the drive to perform a current-limit stop and set the appropriate fault bit, in response to this event.</li> </ul>	Default: 1 = "Alarm" Options: 0 = "Ignore" 1 = "Alarm" 2 = "FltCoastStop" 3 = "Flt RampStop" 4 = "FltCurLimStp"			
400	<b>Rated Amps</b> Current rating of the inverter. The drive automatically sets this at power up. Notes: The maximum value was changed for firmware version 2.003. The maximum value was changed from 2500.0000 to 3000.0000 for firmware version 4.002.	Default: 22.0000 Min/Max: 0.1000/3000.0000 Units: A		RO	Real
401	<b>Rated Volts</b> Nameplate voltage rating of the inverter. The drive automatically sets this at power up.	Default: 480 Min/Max: 75/750 Units: V		RO	16-bit Integer
402	 <b>PWM Frequency</b> Carrier frequency for the PWM output of the drive. Drive derating may occur at higher carrier frequencies. For derating information, refer to the PowerFlex Reference Manual. Default is dependant on power structure of the drive. Note: This parameter was changed for firmware version 3.004 to not allow changes while the drive is running.	Default: 2.0000 (Fr 5, 6, 9 & Up) 4.0000 (Fr 1-4) Min/Max: 1.0000/15.0000 (10.0000 Fr 5, 6, 9 & Up) Units: kHz		RW	Real
403	 <b>Voltage Class</b> Sets the drive configuration for high or low voltage class (for example, 400...480V AC drive). Allows choice of configuration and affects many drive parameters including drive rated current, voltage, power, over loads and maximum PWM carrier frequency. Note: This parameter was changed for firmware version 3.004 to allow the drive to produce an output voltage limited by <a href="#">Par 531</a> [Maximum Voltage] (or maximum voltage defined by the DC bus voltage level, <a href="#">Par 306</a> [DC Bus Voltage], and DC bus voltage utilization limit, <a href="#">Par 500</a> [Bus Util Limit]).	Default: 3 = "High Voltage" Options: 2 = "Low Voltage" 3 = "High Voltage"			
404	 <b>Dead Time</b> The time delay between turning off and turning on an upper device and a lower device in the power structure. This parameter is set at power up and is not user adjustable.	Default: 5.0000 Min/Max: 2.0000/100.0000 Units: µs		RO	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type
405	<b>Dead Time Comp</b> The amount of voltage correction used to compensate for the loss of voltage during dead time. Do not adjust. Contact factory for alternative settings.	Default: 0 Min/Max: 0/200 Units: %		RW	16-bit Integer
406	<b>Power Loss Mode</b> Enter a value to configure the drive's response to a loss of input power, as sensed by an input voltage below the value specified in <a href="#">Par 408</a> [Power Loss Level]. <ul style="list-style-type: none"><li>Enter a value of "0" to make the drive fault and coast to a stop (supply no current to the motor) after the amount of time specified in <a href="#">Par 407</a> [Power Loss Time] has expired.</li><li>Enter a value of "2" to make the drive fault and continue "normal" operation after the amount of time specified in <a href="#">Par 407</a> [Power Loss Time] has expired.</li><li>Enter a value of "5" to make the drive provide only motor flux current during the power loss time.</li></ul>	Default: 0 = "Coast" Options: 0 = "Coast"                      3 = "Reserved" 1 = "Reserved"                4 = "Reserved" 2 = "Continue"                5 = "Flux Only"			
407	<b>Power Loss Time</b> Sets the amount of time that the drive will remain in a ride through condition before a fault is detected.	Default: 2.0000 Min/Max: 0.0000/60.0000 Units: s		RW	Real
408	<b>Power Loss Level</b> Sets the percentage of the bus voltage at which ride-through begins and modulation ends. When the bus voltage falls below this level and <a href="#">Par 406</a> [Power Loss Mode] is set to 0 "Coast" or 5 "Flux Only", an alarm (F92 "Ride Thru") will be displayed on the HIM and the drive prepares for an automatic restart. Enter a percentage of the bus voltage derived from the high voltage setting for the voltage class. For example: On a 400-480V drive,  $0.221 \times 480Vac \times \sqrt{2} = 150Vdc$ Note: The definition was updated to include the bit settings for parameter 406 for firmware version 4.002.	Default: 22.1 Min/Max: 15/95 Units: % Scale: 0		RW	16-bit Integer
409	<b>Line Undervolts</b> Controls the level of bus voltage that is needed to complete precharge and sets the level for undervoltage alarm/fault detection. Enter a percentage of the bus voltage derived from the value in <a href="#">Par 401</a> [Rated Volts]. For example: on a 480V drive,  $0.615 \times 480Vac \times \sqrt{2} = 418Vdc$	Default: 61.5000 Min/Max: 10.0000/90.0000 Units: %		RW	Real
410	<b>PreChrg TimeOut</b> Sets the time duration of precharge. If bus voltage does not stabilize within this amount of time, a Precharge Error exception event occurs.	Default: 30.0000 Min/Max: 10.0000/180.0000 Units: s		RW	Real
411	<b>PreChrg Control</b> Must equal 1 to allow drive to exit precharge and begin to run. Link this parameter to a controller output word to coordinate the precharge of multiple drives.	Default: 1 = "Enbl PrChrg" Options: 0 = "Hold PrChrg" 1 = "Enbl PrChrg"			

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																																		
412	<b>Power EE TP Sel</b> Enter or write a value to select drive power EEPROM data displayed in <a href="#">Par 413</a> [Power EE TP Data]. The default is 0 "Zero". Note: Options 74 - 92 were changed and options 93 - 111 were added for firmware version 3.001. <b>Options:</b> <table><tr><td>0 = Zero</td><td>19 = Bus VltScale</td><td>38 = IGBT Rated A</td><td>61 = ConvT Type</td><td>80 = HH1 P/B ID</td><td>99 = HH2 P/B ID</td></tr><tr><td>1 = Volt Class</td><td>20 = Sml PS Watts</td><td>39 = IGBT V Thres</td><td>62 = DC Bus Induc</td><td>81 = HH1 S/W ID</td><td>100 = HH2 S/W ID</td></tr><tr><td>2 = Assy Rev</td><td>21 = Sml PS Min V</td><td>40 = IGBT Slope R</td><td>63 = AC Inp Induc</td><td>82 = HH1 P/B Rev</td><td>101 = HH2 P/B Rev</td></tr><tr><td>3 = ASA S/N</td><td>22 = Lrg PS Watts</td><td>41 = IGBT Sw Engy</td><td>64 = Precharg Res</td><td>83 = HH1 S/W Rev</td><td>102 = HH2 S/W Rev</td></tr><tr><td>4 = Manuf Year</td><td>23 = Lrg PS Min V</td><td>44 = IGBT CS Tres</td><td>65 = PrechThrm Tc</td><td>84 = HH1 Extr Data</td><td>103 = HH2 ExtrData</td></tr><tr><td>5 = Manuf Month</td><td>24 = Inv Rated Kw</td><td>45 = IGBT CS Tc</td><td>66 = Mtr NP Units</td><td>85 = HH1 VoltIndx</td><td>104 = HH2 VoltIndx</td></tr><tr><td>6 = Manuf Day</td><td>25 = Inv Rated V</td><td>46 = Diode V Thrs</td><td>67 = Mtr NP Power</td><td>86 = HH1 Sizelndx</td><td>105 = HH2 Sizelndx</td></tr><tr><td>7 = Tst ProcStat</td><td>26 = Inv Rated A</td><td>47 = Diode SlopeR</td><td>68 = Mtr NP Volts</td><td>87 = HH1 Option</td><td>106 = HH2 Option</td></tr><tr><td>8 = Life PwrCycl</td><td>27 = Inv 1min Amp</td><td>48 = Diode JC Tr</td><td>69 = Mtr NP Amps</td><td>88 = HH1 HrdPrdct</td><td>107 = HH2 HrdPrdct</td></tr><tr><td>9 = Life Pwrup</td><td>28 = inv 3sec Amp</td><td>49 = Diode JC Tc</td><td>70 = Mtr NP Freq</td><td>89 = HH1 H/W Mdfy</td><td>108 = HH2 H/W Mdfy</td></tr><tr><td>10 = Life RunTime</td><td>29 = SW OverC Amp</td><td>50 = GBT Tjmax</td><td>71 = Mtr NP RPM</td><td>90 = HH1 1V/Amp</td><td>109 = HH2 1V/Amp</td></tr><tr><td>11 = Kw Accum</td><td>30 = DC Bus Cap</td><td>51 = HS Max DegC</td><td>72 = Mtr IR Vdrop</td><td>91 = HH1 2s/Amp</td><td>110 = HH2 2s/Amp</td></tr><tr><td>12 = Mw Hrs Accum</td><td>31 = Min PWM Khz</td><td>52 = DB IGBT Amp</td><td>73 = Mtr Id Ref</td><td>92 = HH1 Scale</td><td>111 = HH2 Scale</td></tr><tr><td>13 = Inv High Vlt</td><td>32 = Max PWM Khz</td><td>53 = DB ohms</td><td>74 = HH1 Data Rev</td><td>93 = HH2 Data Rev</td><td></td></tr><tr><td>14 = Reserved</td><td>33 = Dfl PWM Khz</td><td>54 = DB E Jo/degC</td><td>75 = HH1 Dev Type</td><td>94 = HH2 Dev Type</td><td></td></tr><tr><td>15 = Fan/Pwr Cntl</td><td>34 = PWM Dead us</td><td>55 = DB EB C/Watt</td><td>76 = HH1 Serial #</td><td>95 = HH2 Serial #</td><td></td></tr><tr><td>16 = Temp Sensor</td><td>35 = Drive Frame</td><td>56 = DB B Jo/degC</td><td>77 = HH1 Test Date</td><td>96 = HH2 TestDate</td><td></td></tr><tr><td>17 = Phs AmpScale</td><td>36 = IGBTs per Pk</td><td>57 = DB BA C/Watt</td><td>78 = HH1 Vcn Code</td><td>97 = HH2 Vcn Code</td><td></td></tr><tr><td>18 = Gnd AmpScale</td><td>37 = GBT Rated V</td><td>60 = DB Ambt Tmax</td><td>79 = HH1 CrsCnclD</td><td>98 = HH2 CrsCnclD</td><td></td></tr></table>	0 = Zero	19 = Bus VltScale	38 = IGBT Rated A	61 = ConvT Type	80 = HH1 P/B ID	99 = HH2 P/B ID	1 = Volt Class	20 = Sml PS Watts	39 = IGBT V Thres	62 = DC Bus Induc	81 = HH1 S/W ID	100 = HH2 S/W ID	2 = Assy Rev	21 = Sml PS Min V	40 = IGBT Slope R	63 = AC Inp Induc	82 = HH1 P/B Rev	101 = HH2 P/B Rev	3 = ASA S/N	22 = Lrg PS Watts	41 = IGBT Sw Engy	64 = Precharg Res	83 = HH1 S/W Rev	102 = HH2 S/W Rev	4 = Manuf Year	23 = Lrg PS Min V	44 = IGBT CS Tres	65 = PrechThrm Tc	84 = HH1 Extr Data	103 = HH2 ExtrData	5 = Manuf Month	24 = Inv Rated Kw	45 = IGBT CS Tc	66 = Mtr NP Units	85 = HH1 VoltIndx	104 = HH2 VoltIndx	6 = Manuf Day	25 = Inv Rated V	46 = Diode V Thrs	67 = Mtr NP Power	86 = HH1 Sizelndx	105 = HH2 Sizelndx	7 = Tst ProcStat	26 = Inv Rated A	47 = Diode SlopeR	68 = Mtr NP Volts	87 = HH1 Option	106 = HH2 Option	8 = Life PwrCycl	27 = Inv 1min Amp	48 = Diode JC Tr	69 = Mtr NP Amps	88 = HH1 HrdPrdct	107 = HH2 HrdPrdct	9 = Life Pwrup	28 = inv 3sec Amp	49 = Diode JC Tc	70 = Mtr NP Freq	89 = HH1 H/W Mdfy	108 = HH2 H/W Mdfy	10 = Life RunTime	29 = SW OverC Amp	50 = GBT Tjmax	71 = Mtr NP RPM	90 = HH1 1V/Amp	109 = HH2 1V/Amp	11 = Kw Accum	30 = DC Bus Cap	51 = HS Max DegC	72 = Mtr IR Vdrop	91 = HH1 2s/Amp	110 = HH2 2s/Amp	12 = Mw Hrs Accum	31 = Min PWM Khz	52 = DB IGBT Amp	73 = Mtr Id Ref	92 = HH1 Scale	111 = HH2 Scale	13 = Inv High Vlt	32 = Max PWM Khz	53 = DB ohms	74 = HH1 Data Rev	93 = HH2 Data Rev		14 = Reserved	33 = Dfl PWM Khz	54 = DB E Jo/degC	75 = HH1 Dev Type	94 = HH2 Dev Type		15 = Fan/Pwr Cntl	34 = PWM Dead us	55 = DB EB C/Watt	76 = HH1 Serial #	95 = HH2 Serial #		16 = Temp Sensor	35 = Drive Frame	56 = DB B Jo/degC	77 = HH1 Test Date	96 = HH2 TestDate		17 = Phs AmpScale	36 = IGBTs per Pk	57 = DB BA C/Watt	78 = HH1 Vcn Code	97 = HH2 Vcn Code		18 = Gnd AmpScale	37 = GBT Rated V	60 = DB Ambt Tmax	79 = HH1 CrsCnclD	98 = HH2 CrsCnclD

415	<b>BusReg/Brake Ref</b> Sets the "turn-on" voltage for the bus regulator and brakes. Enter a percentage of the high voltage setting for the voltage class. For example, on a 400...480V AC drive, $111 \times \sqrt{2} \times 480 = VDC$ Note: The minimum value for frame 5 and up, 600V AC input drives was changed from 110.5000 to 100.0000 for firmware version 4.002. (1) The minimum value is 100.0000 for frame 5 and up, 600V AC input drives.	Default: 111.0000 Min/Max: 110.5000 <sup>(1)</sup> /117.8000 Units: %		RW	Real																																																																																																																		
416	<b>Brake PulseWatts</b> Limits the power delivered to the external Dynamic Brake (DB) resistor for one second, without exceeding the rated element temperature. You may change the value of this parameter only if you have selected an external DB resistor (set bit 1 "Brake Extern" of <a href="#">Par 414</a> [Brake/Bus Cnfg]). If this rating is not available from the resistor vendor, you can approximate it with this equation: <a href="#">Par 416</a> [Brake PulseWatts] = 75,000 x Weight, where Weight equals the weight of resistor wire element in pounds (not the entire weight of the resistor). Another equation you can use is: <a href="#">Par 416</a> [Brake PulseWatts] = Time Constant x Brake Watts; where Time Constant equals the amount of time to reach 63% of its rated temperature while the maximum power is applied, and Brake Watts is the peak power rating of the resistor. Note: The maximum value was changed from 1000000.0000 to 1000000000.0000 for firmware version 3.001.	Default: 2000.0000 Min/Max: 1.0000/1000000000.0000 Units: W		RW	Real																																																																																																																		

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																					
417 	<b>Brake Watts</b> Sets the continuous rated power reference for the Dynamic Brake (DB). You may change the value of this parameter only if you have selected an external DB resistor (set bit 1 "Brake Extern" of <a href="#">Par 414</a> [Brake/Bus Cnfg]). Note: The maximum value was changed from 5000.0000 to 500000.0000 for firmware version 3.001.	Default: 100.0000 Min/Max: 0.0000/500000.0000 Units: W		RW	Real																																																					
418	<b>Brake TP Sel</b> Enter or write a value to select the drive brake data displayed in <a href="#">Par 419</a> [Brake TP Data].	Default: 0 = "Zero" Options: 0 = "Zero" 10 = "Data State" 1 = "Duty Cycle" 11 = "MC BrakeEnbl" 2 = "Power Actual" 12 = "1/rdb" 3 = "Max BodyTemp" 13 = "1/th_eb" 4 = "Max ElemTemp" 14 = "1/ce" 5 = "BodyTemp Act" 15 = "tamax" 6 = "ElemTemp Act" 16 = "1/th_ba" 7 = "BTripStat" 17 = "1/cb" 8 = "ETripStat" 18 = "DB IGBT Amp" 9 = "Int DB Ohms"																																																								
419	<b>Brake TP Data</b> Displays the data selected by <a href="#">Par 418</a> [Brake TP Sel].	Default: 0.0000 Min/Max: -/+22000000000.0000		RO	Real																																																					
420	<b>Pwr Strct Mode</b> Displays the power structure used in the drive. This is an identifier to the firmware for power structure control. <ul style="list-style-type: none"><li>Bit 0 "Lo Pwr Strct" = PowerFlex 700S Frame 1 to 6</li><li>Bit 1 "Hi Pwr Strct" = PowerFlex 700S above Frame 6</li><li>Bit 3 "Parallel Drv" = PowerFlex 700S Frame 12</li></ul> Note: Bit 3 "Parallel Drv" was added for firmware version 3.001.  <table><tr><td>Options</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Parallel Drv</td><td>PF 700L</td><td>Hi Pwr Strct</td><td>Lo PwrStrct</td><td></td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0 = False</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td><td>1 = True</td></tr></table>	Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Parallel Drv	PF 700L	Hi Pwr Strct	Lo PwrStrct		Default	x	x	x	x	x	x	x	x	x	x	x	x	0	0	0	0	0 = False	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	1 = True

421 	<b>Iqs Integ Freq</b> Sets the break frequency of the torque producing (q-axis) current regulator. This and <a href="#">Par 422</a> [Iqs Reg P Gain] determine the integral gain for the q-axis current regulator. Set by the autotune procedure. Do not change this value.	Default: 10 Min/Max: 0/32767 Units: rad/s		RW	16-bit Integer																																																					
422 	<b>Iqs Reg P Gain</b> Sets the proportional gain of the torque producing (q-axis) current regulator. Set by the autotune procedure. Do not change this value.	Default: 1.0 Min/Max: 0.0/100.0 Scale: x 10		RW	16-bit Integer																																																					
423 	<b>Iqs Rate Limit</b> Sets the limit of the rate of change for the torque producing (q-axis) current regulator. Do not change this parameter. Use <a href="#">Par 355</a> [Iq Rate Limited] to control the q-axis current rate limit.	Default: 800.0 Min/Max: 0.0/800.0 Units: %/ms Scale: x 10		RW	16-bit Integer																																																					
424 	<b>Flux Ratio Ref</b> Active only in the Field Oriented Control (FOC) 2 motor control mode (when <a href="#">Par 485</a> [Motor Ctrl Mode] equals 1 - "FOC 2"). Provides a scaling factor for the flux producing (d-axis) current reference. <ul style="list-style-type: none"><li>When active (<a href="#">Par 511</a> [FVC2 Mode Config], bit 28 "FlxRatRef Use" is set), Flux Producing (d-axis) Current Reference = <a href="#">Par 488</a> [Flux Current] x <a href="#">Par 424</a> [Flux Ratio Ref].</li><li>When inactive (<a href="#">Par 511</a> [FVC2 Mode Config], bit 28 "FlxRatRef Use" is cleared) Flux Producing (d-axis) Current Reference = <a href="#">Par 488</a> [Flux Current] below base speed and Flux Producing (d-axis) Current Reference = <a href="#">Par 488</a> [Flux Current] x motor base speed/motor speed above base speed.</li></ul>	Default: 99.99 Min/Max: 12.50/399.99 Units: % Scale: 100 = 32767		RW	16-bit Integer																																																					
425 	<b>Flux Rate Limit</b> Sets the limit for the maximum rate of change for flux producing (d-axis) current.	Default: 1.0 Min/Max: 0.0/195.3 Units: %/ms Scale: x 10		RW	16-bit Integer																																																					
426 	<b>Flux Satur Coef</b> This represents the amount of flux current required to compensate for the flux saturation effect of the motor. Active only for FOC 2 motor control mode.	Default: 0.0 Min/Max: 0.0/51.3 Units: % Scale: x 10		RW	16-bit Integer																																																					
427 	<b>PM Mtr CEMF Comp</b> Provides CEMF compensation for the torque producing (q-axis) current in the permanent magnet motor mode.	Default: 0 Min/Max: 0/100 Units: %		RW	16-bit Integer																																																					
428  	<b>IReg IGain Fctr</b> Adjustment for current regulator integral frequency factor (gain).	Default: 1 Min/Max: 1/20		RW	16-bit Integer																																																					

No.	Name Description	Values	Linkable	Read-Write	Data Type
<b>429</b> <b>A</b>	<b>Ids Integ Freq</b> Sets the break frequency of the flux producing (d-axis) current regulator. This and <a href="#">Par 430</a> [Ids Reg P Gain] determine the integral gain for the d-axis current regulator. Set by the autotune procedure. Do not change this value.	Default: 10 Min/Max: 0/32767 Units: rad/s		RW	16-bit Integer
<b>430</b> <b>A</b>	<b>Ids Reg P Gain</b> Sets the proportional gain of the flux producing (d-axis) current regulator. Set by the autotune procedure. Do not change this value.	Default: 1.0 Min/Max: 0.0/100.0 Scale: x 10		RW	16-bit Integer
<b>431</b> <b>A</b>	<b>Test Current Ref</b> Sets the current reference used for Motor Control (MC) Test Mode.	Units: % Default: 50.0 Min/Max: 0.0/799.9 Scale: x 10		RW	16-bit Integer
<b>432</b> <b>A</b>	<b>Test Freq Ref</b> Sets the frequency reference used for Motor Control (MC) Test Mode. Note: The default value was changed for firmware version 2.003.	Default: 1.0 Min/Max: -/+799.9 Units: % Scale: x 10		RW	16-bit Integer
<b>433</b> <b>A</b>	<b>Test Freq Rate</b> Sets the rate of change of frequency reference used for Motor Control (MC) Test Mode.	Default: 5.0 Min/Max: 0.0/1000.0 Units: %/s Scale: x 10		RW	16-bit Integer
<b>434</b> <b>A</b>	<b>Mtr Vds Base</b> Displays the motor flux producing (d-axis) voltage command when running at nameplate motor speed and load. This value is determined during the auto-tune procedure. Do not change this value. Used only in FOC modes.	Default: 0 Min/Max: -8192/0		RO	16-bit Integer
<b>435</b> <b>A</b>	<b>Mtr Vqs Base</b> Displays the motor torque producing (q-axis) voltage command when running at nameplate motor speed and load. This value is determined during the auto-tune procedure. Do not change this value. Used only in FOC modes.	Default: 0 Min/Max: 0/8192		RO	16-bit Integer
<b>437</b> <b>A</b>	<b>Vqs Max</b> Displays the maximum torque producing (q-axis) voltage allowed on the motor. Adaptation is disabled below this voltage. This value is determined during the auto-tune procedure. Do not change this value. Used only in FOC modes.	Default: 7971 Min/Max: 0/32767		RW	16-bit Integer
<b>438</b> <b>A</b>	<b>Vds Max</b> Displays the maximum flux producing (d-axis) voltage allowed on the motor. Adaptation is disabled below this voltage. This value is determined during the auto-tune procedure. Do not change this value. Used only in FOC modes.	Default: 5793 Min/Max: 0/32767		RW	16-bit Integer
<b>439</b> <b>A</b>	<b>Vqs Min</b> Displays the minimum torque producing (q-axis) voltage required for motor control adaptation. This value is determined during the auto-tune procedure. Do not change this value. Used only in FOC modes.	Default: 246 Min/Max: -/+32767		RW	16-bit Integer
<b>440</b> <b>A</b>	<b>Vds Min</b> Displays the minimum flux producing (d-axis) voltage required for motor control adaptation. Adaptation is disabled below this voltage. This value is determined during the auto-tune procedure. Do not change this value.	Default: 246 Min/Max: -/+32767		RW	16-bit Integer
<b>441</b> <b>A</b>	<b>Vds Fdbk Filt</b> Displays measured filtered motor flux producing (d-axis) voltage.	Default: 0 Min/Max: -/+32767		RO	16-bit Integer
<b>442</b> <b>A</b>	<b>Vqs Fdbk Filt</b> Displays measured filtered motor torque producing (q-axis) voltage.	Default: 0 Min/Max: -/+32767		RO	16-bit Integer
<b>443</b> <b>A</b>	<b>Flux Reg P Gain1</b> Sets the Proportional (P) gain for the flux regulator. Do not change this value.	Default: 150 Min/Max: 0/32767		RW	16-bit Integer
<b>444</b> <b>A</b>	<b>Flux Reg I Gain</b> Sets the Integral (I) gain for the flux regulator. Do not change this value.	Default: 350 Min/Max: 0/32767		RW	16-bit Integer
<b>445</b> <b>A</b>	<b>Slip Gain Max</b> Displays the maximum slip frequency allowed in the motor control. The scaling is in hertz x 256. This value is determined during the auto-tune procedure. Do not change this value.	Default: 300 Min/Max: 100/10000 Units: %		RW	16-bit Integer
<b>446</b> <b>A</b>	<b>Slip Gain Min</b> Displays the minimum slip frequency allowed in the motor control. The scaling is in hertz x 256. This value is determined during the auto-tune procedure. Do not change this value.	Default: 50 Min/Max: 0/100 Units: %		RW	16-bit Integer
<b>447</b> <b>A</b>	<b>Slip Reg P Gain</b> Sets the Proportional (P) gain for the slip regulator. Do not change this value.	Default: 35 Min/Max: 0/32767		RW	16-bit Integer
<b>448</b> <b>A</b>	<b>Slip Reg I Gain</b> Sets the Integral (I) gain for the slip regulator. Do not change this value.	Default: 100 Min/Max: 0/32767		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																				
449 <div>A</div>	<b>SrLss FreqReg Ki</b> Sets the integral gain of the Frequency Regulator, which estimates motor speed when sensorless feedback is selected. Do not change this value.	Default: 250 Min/Max: 0/32767		RW	16-bit Integer																																																																																																				
450 <div>A</div>	<b>SrLss FreqReg Kp</b> Sets the proportional gain of the Frequency Regulator, which estimates motor speed when sensorless feedback is selected. Do not change this value.	Default: 350 Min/Max: 0/32767		RW	16-bit Integer																																																																																																				
453 <div>A</div>	<b>Iu Offset</b> Sets the current offset correction for the phase U current. This value is set automatically when the drive is not running and Motor Control (MC) is not faulted. Do not change this value.	Default: 0 Min/Max: -/+32767		RW	16-bit Integer																																																																																																				
454 <div>A</div>	<b>Iw Offset</b> Sets the current offset correction for the flux producing (d-axis) current regulator. This value is set automatically when the drive is not running and Motor Control (MC) is not faulted. Do not change this value.	Default: 0 Min/Max: -/+32767		RW	16-bit Integer																																																																																																				
456	<b>MC Build Number</b> Displays the build number of the drive's Motor Control (MC) software.	Default: 0 Min/Max: 0/65535		RO	16-bit Integer																																																																																																				
457	<b>MC Firmware Rev</b> Displays the major and minor revision levels of the drive's Motor Control (MC) software. Changed all values to three decimal places for firmware version 4.001.	Default: 0.000 Min/Max: 0.000/655.350 Scale: x 10		RO	16-bit Integer																																																																																																				
459	<b>IdsCompCoeff Mot</b> Defines the flux producing current (Ids) command compensation coefficient used during motoring. When this parameter is set to 1024 the amount of compensation, which is proportional to torque producing current (Iqs) command, is 100% of the rated flux current at 1 P.U. of Iqs command when the torque producing voltage (Vqs) regulator is off and <a href="#">Par 510</a> [FVC Mode Config], bit 7 “Ids Comp En” = “1”. No Ids command compensation will be applied when Par 510 [FVC Mode Config], bit 7 = “0”. Notes: Refer to “Ids Compensation Coefficient Set Up” in the <i>PowerFlex 700S with Phase II Control Reference Manual</i> , publication <a href="#">PFLEX-RM003</a> , for more information. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer																																																																																																				
460	<b>IdsCompCoeff Reg</b> Defines the flux producing current (Ids) command compensation coefficient used during regeneration. When this parameter is set to 1024 the amount of compensation, which is proportional to torque producing current (Iqs) command, is 100% of the rated flux current at 1 P.U. of Iqs command when the Vqs regulator is off and <a href="#">Par 510</a> [FVC Mode Config], bit 7 “Ids Comp En” = “1”. No Ids command compensation will be applied when Par 510 [FVC Mode Config], bit 7 = “0”. Notes: Refer to “Ids Compensation Coefficient Set Up” in the <i>PowerFlex 700S with Phase II Control Reference Manual</i> , publication <a href="#">PFLEX-RM003</a> , for more information. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer																																																																																																				
461	<b>SlipReg Off Iqs</b> Defines the torque producing current (Iqs) reference level below which the slip regulator turns off, when the slip regulator turn off point is defined as ((Par 461 / 10) + 5) % of the rated Iqs reference. The slip regulator turn on point is defined as ((Par 461 / 10) + 10) % of the rated Iqs reference with the condition of the Vqs regulator is turned on. Note: This parameter was added for firmware version 4.001.	Default: 200 Min/Max: +/-32767		RW	16-bit Integer																																																																																																				
462	<b>VqsReg Off Freq</b> Defines the output frequency level below which the Vqs regulator turns off, when the Vqs regulator turn off point is defined as (Par 462 / 10) % of the rated motor frequency. The Vqs regulator turn on point is defined as ((Par 462 / 10) + 2) % of the rated motor frequency. Note: This parameter was added for firmware version 4.001.	Default: 150 Min/Max: 0/1000		RW	16-bit Integer																																																																																																				
463 <div>A</div>	<b>MC Diag Error 1</b> Displays the first diagnostic error encountered by the Motor Control (MC). Errors appear in this parameter in the order in which they occurred. Note: Bits 7 & 8 have been changed to “Ground Fault” for firmware version 2.004.	<table><tr><th>Options</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Neg Parametr</th><th>Not Rotating</th><th>Not Rotating</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>WP-VNOn-Wcur</th><th>WP-VNOn-U,W</th><th>VP-VNOn-Wcur</th><th>VP-VNOn-Ucur</th><th>UP-VNOn-U,W</th><th>UP-VNOn-Ucur</th><th>Ground Fault</th><th>Ground Fault</th><th>UPVPdevShrt</th><th>UPWPdevShrt</th><th>VPWPdevShrt</th><th>UN,VNdevShrt</th><th>UN,VNdevShrt</th><th>VN,VNdevShrt</th><th>Vbus Range</th></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>31</td><td>30</td><td>29</td><td>28</td><td>27</td><td>26</td><td>25</td><td>24</td><td>23</td><td>22</td><td>21</td><td>20</td><td>19</td><td>18</td><td>17</td><td>16</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>				Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Neg Parametr	Not Rotating	Not Rotating	Reserved	Reserved	Reserved	WP-VNOn-Wcur	WP-VNOn-U,W	VP-VNOn-Wcur	VP-VNOn-Ucur	UP-VNOn-U,W	UP-VNOn-Ucur	Ground Fault	Ground Fault	UPVPdevShrt	UPWPdevShrt	VPWPdevShrt	UN,VNdevShrt	UN,VNdevShrt	VN,VNdevShrt	Vbus Range	Default	x	x	x	x	x	x	x	x	x	x	x	x	0	0	0	x	x	x	0	0	0	0	0	0	0	0	0	0	0	0	0	0	Bit	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

<b>486</b> <b>A</b>	<b>Rated Slip Freq</b> Displays the control slip frequency, determined from <a href="#">Par 3</a> [Motor NP Hertz] and <a href="#">Par 4</a> [Motor NP RPM]. Measured and updated by the autotune procedure. Do not change this value. Note: Changed the attributes to allow changing this parameter while the drive is running for firmware version 3.001.	Default: 0.470 Min/Max: 0.000/32.000 Units: Hz Scale: x 1000		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
487  	<b>Motor NTC Coef</b> Defines a coefficient used to calculate the rotor temperature from the measured stator temperature. Used only in Field Oriented Control - 2 (FOC2) mode. See Par 485 [Motor Ctrl Mode].	Default: 100 Min/Max: 50/200 Units: %		RW	16-bit Integer
488  	<b>Flux Current</b> Specifies the magnetizing current that produces rated flux in the motor in a per unit (percent representation). Measured by the auto-tune procedure. Do not change this value.	Default: 30.00 Min/Max: 0.00/75.00 Units: % Scale: x 100		RW	16-bit Integer
489  	<b>Flx CurFdbk (Id)</b> Displays flux producing (d-axis) current feedback.	Default: 0.0000 Min/Max: -/+8.0000 P.U. Units: P.U.		RO	Real
490  	<b>StatorInductance</b> Displays the sum of the stator and cable inductances of the motor in per unit (percent representation), as determined by the auto-tune procedure. Scaled to percent of rated motor impedance. Do not change this value. Note: the default value was changed from 8192 to 4096 for firmware version 3.001.	Default: 100.0 Min/Max: 0.00/799.99 Units: % Scale: 100 = 4096		RW	16-bit Integer
491  	<b>StatorResistance</b> Displays the sum of the stator and cable resistances of the motor in per unit (percent representation), as determined by the auto-tune procedure. Scaled to percent of rated motor impedance. Do not change this value.	Default: 1.00 Min/Max: 0.00/100.00 Units: % Scale: 100 = 8192		RW	16-bit Integer
492  	<b>Leak Inductance</b> Displays the sum of the motor stator and rotor leak inductance, and motor cable inductances in per unit (percent representation), as determined by the auto-tune procedure. Scaled to percent of rated motor impedance. Do not change this value.	Default: 20.00 Min/Max: 0.00/100.00 Units: % Scale: 100 = 8192		RW	16-bit Integer
493  	<b>Leak Indc Satur1</b> Displays the leakage inductance correction for the first overload level as determined by the autotune procedure.	Default: 100.00 Min/Max: 25.00/100.00 Units: %		RW	16-bit Integer
494  	<b>Leak Indc Satur2</b> Displays the leakage inductance correction for the first overload level as determined by the auto-tune procedure.	Default: 100.00 Min/Max: 25.00/100.00 Units: %		RW	16-bit Integer
495  	<b>Iqs Command</b> Displays the torque producing (q-axis) current command.	Default: 0.0 Min/Max: -/+800.0 Units: % Scale: x 10		RO	16-bit Integer
496  	<b>Ids Command</b> Displays the flux producing (d-axis) current command.	Default: 0.0 Min/Max: -/+800.0 Units: % Scale: x 10		RO	16-bit Integer
497  	<b>Vqs Command</b> Displays the command for initiation of voltage on the torque producing axis (q-axis).	Default: 0 Min/Max: -/+200 Units: % Scale: 100 = 8192		RO	16-bit Integer
498  	<b>Vds Command</b> Displays the command for initiation of voltage on the flux producing axis (d-axis).	Default: 0 Min/Max: -/+200 Units: % Scale: 100 = 8192		RO	16-bit Integer
499  	<b>Trq CurFdbk (Iq)</b> Displays torque producing (q-axis) current feedback.	Default: 0.0000 Min/Max: -/+8.0000 Units: P.U.		RO	Real
500  	<b>Bus Util Limit</b> Sets the maximum allowed bus voltage utilization for the Motor Control. Do not change this value. Higher values may result in control instability or over-current faults.	Default: 90.0 Min/Max: 0.0/100.0 Units: % Scale: 100 = 8192		RW	16-bit Integer
501  	<b>Torque En Dly</b> Sets the delay between the time the drive is enabled and the time the Motor Control applies torque.	Default: 100 Min/Max: 0/32767 Units: ms Scale: 100 = 8192		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
502	<b>Rotor Resistance</b> Displays rotor resistance, as determined by the auto-tune procedure. Scaled to percent of rated motor impedance. Do not change this value.	Default: 1.00 Min/Max: 0.00/100.00 Units: % Scale: 100 = 8192		RW	16-bit Integer
503	<b>Current Reg BW</b> Sets the bandwidth for the current regulator. <a href="#">Par 402</a> [PWM Frequency] limits the maximum value. Reducing the value reduces current regulator over-shoot.	Default: 600 Min/Max: 100/30000 Units: rad/s		RW	16-bit Integer
504	<b>PM AbsEncd Offst</b> Determined by auto-tune procedure.	Default: 0 Min/Max: 0/65535		RW	16-bit Integer
505	<b>PM TestWait Time</b> Defines the time interval used for the automated measurement of <a href="#">Par 504</a> [PM AbsEncd Offst] for a Permanent Magnet (PM) motor.	Default: 2000 Min/Max: 500/5000 Units: ms		RW	16-bit Integer
506	<b>PM Test Idc Ramp</b> Defines the ramp rate of the Flux Producing (d-axis) current reference that is used for the automated measurement of <a href="#">Par 504</a> [PM AbsEncd Offst] for a Permanent Magnet (PM) motor.	Default: 0.1 Min/Max: 0.0/195.3 Units: %/ms Scale: x 10		RW	16-bit Integer
507	<b>PM Test FreqRamp</b> Defines the ramp rate of the frequency reference that is used for the automated measurement of <a href="#">Par 504</a> [PM AbsEncd Offst] for a Permanent Magnet (PM) motor.	Default: 0.1 Min/Max: 0.0/195.3 Units: %/ms Scale: x 10		RW	16-bit Integer
508	<b>PM Test Freq Ref</b> Defines the frequency reference that is used for the automated measurement of <a href="#">Par 504</a> [PM AbsEncd Offst] for a Permanent Magnet (PM) motor.	Default: 10.0 Min/Max: -/+799.9 Units: % Scale: x 10		RW	16-bit Integer
509	<b>PM Test I Ref</b> Defines the amplitude of the Flux Producing (d-axis) current reference that is used for the automated measurement of <a href="#">Par 504</a> [PM AbsEncd Offst] for a Permanent Magnet (PM) motor.	Default: 30.0 Min/Max: 0.0/799.9 Units: % Scale: x 10		RW	16-bit Integer

510	<b>FVC Mode Config</b> Configures Field Oriented Control (FOC) operation. <ul style="list-style-type: none"> <li>Bit 4 "SlipTuneDone" when set, the value in <a href="#">Par 486</a> [Rated Slip Freq] is used as the slip gain before the slip regulator becomes active, after power is cycled, or when the drive is reset by the system. When the Slip Tune is completed, this bit will be automatically be set and Par 486 will be updated.</li> <li>Bit 7 "Ids Comp En" setting this bit runs the Ids test, to establish the initial flux current level for the motor, and the inertia test (even if already run).</li> <li>Bit 12 "SlipRsCompEn" when set, the stator resistance will be compensated based on the output of the slip regulator.</li> <li>Bit 16 "ManuCurOffst" when set, <a href="#">Par 453</a> [Iu Offset] is used as the phase U current feedback offset value and <a href="#">Par 454</a> [Iw Offset] is used as the phase W current feedback offset value. When this bit is not set (default) the phase U and W current feedback offset values are automatically updated when the drive is in a stop condition except during the first 10 seconds of the stop condition.</li> <li>Bit 17 "ManuVltOffst" when this bit is set, <a href="#">Par 549</a> [Vuv Fdbk Offset] is used as the UV voltage feedback offset value and <a href="#">Par 550</a> [Vvw Fdbk Offset] is used as the VW voltage feedback offset value.</li> <li>Bit 23 "SyncTrans En" when set (default), the synchronous transfer algorithm using voltage feedback data is active.</li> </ul> Notes: Bit changes were made for firmware version 2.003. Bits 10 and 11 were added for firmware version 3.001. Changed bit 3 from "Reserved" to "FastFluxDsbl" for firmware version 3.003. Added bits 4, 7, 12, 16, 17 and 23 for firmware version 4.001.

520	<b>PM Q Inductance</b> Indicates the percent-per unit inductance of the motor stator in the torque producing (q-axis).	Default: 20.00 Min/Max: 0.00/399.99 Units: % Scale: 100 = 8192		RW	16-bit Integer																																																																																																			
521	<b>PM D Inductance</b> Indicates the percent-per unit inductance of the motor stator in the flux producing (d-axis).	Default: 20.00 Min/Max: 0.00/399.99 Units: % Scale: 100 = 8192		RW	16-bit Integer																																																																																																			
522	<b>PM Stator Resist</b> Indicates the percent-per unit resistance of the motor stator.	Default: 1.50 Min/Max: 0.00/100.00 Units: % Scale: 100 = 8192		RW	16-bit Integer																																																																																																			
523	<b>PM Mtr CEMF Coef</b> Indicates the coefficient for Counter Electro Motive Force (CEMF) voltage, normalized to base motor speed.	Default: 89.99 Min/Max: 0.00/399.99 Units: % Scale: 100 = 8192		RW	16-bit Integer																																																																																																			
525	<b>Slip Ratio</b> Used by the Field Oriented Control - 2 (FOC2) mode. Indicates the present operating slip frequency at 100% Torque Producing Current (Iqs) scaled to hertz x 100.	Default: 0.00 Min/Max: 0.00/327.67 Units: Hz Scale: x 10		RO	16-bit Integer																																																																																																			
526	<b>Stator Frequency</b> Displays stator frequency as a percentage of <a href="#">Par 3</a> [Motor NP Hertz].	Default: 0.0 Min/Max: +/-800.0 Units: % Scale: x 10		RO	16-bit Integer																																																																																																			

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																							
527 <div>A</div>	<b>Start/Acc Boost</b> Sets the voltage boost level for starting and acceleration when “V/Hz” mode is selected. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	50.0 0.0/1150.0 VAC		RW	16-bit Integer																																																							
528 <div>A</div>	<b>Run Boost</b> Sets the boost level for steady state or deceleration when “V/Hz” mode is selected. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	50.0 0.0/1150.0 VAC		RW	16-bit Integer																																																							
529 <div>A</div>	<b>Break Voltage</b> Sets the voltage the drive will output at <a href="#">Par 530</a> [Break Frequency]. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	1150.0 0.0/6900.0 VAC		RW	16-bit Integer																																																							
530 <div>A</div>	<b>Break Frequency</b> Sets the frequency the drive will output at <a href="#">Par 529</a> [Break Voltage]. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	150.0 0.0/400.0 Hz		RW	16-bit Integer																																																							
531 <div>A</div>	<b>Maximum Voltage</b> Sets the highest voltage the drive will output. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	460.0 60.0/690.0 VAC		RW	16-bit Integer																																																							
532 <div>A</div>	<b>Maximum Freq</b> Sets the highest frequency the drive will output. This parameter is a function of <a href="#">Par 3</a> [Motor NP Hertz]. Note: This parameter was added for firmware version 2.003.	Default: Min/Max: Units:	( <a href="#">Par 3</a> [Motor NP Hertz] x 2) + 10Hz <a href="#">Par 3</a> [Motor NP Hertz] + 10 Hz/420.0 Hz		RW	16-bit Integer																																																							
533 <div>A</div>	<b>SlewRateTimeLimt</b> Defines the time limit in seconds during which torque producing voltage (Vqs) regulator output variations are limited by each slew rate at the transition where the Vqs regulator turns on. The same time limit is applied at the transition to the slip regulator when the slip regulator turns on. A value of zero disables the slew rate function on both the Vqs regulator output and the slip regulator output. <a href="#">Par 553</a> defines the slew rate for the slip regulator and <a href="#">Par 586</a> [IdsCmd Slew Rate] defines the slew rate for the Vqs regulator. Notes: This parameter was added for firmware version 3.001. This parameter was renamed from “Flux Gain Adjust” to “SlewRateTimeLimit”, the default value was changed to “10.0” and the minimum value was changed to “0.0” for firmware version 4.001.	Default: Min/Max:	0.0 0.0/1126.0		RW	16-bit Integer																																																							
534 <div>A</div>	<b>Nth CompOff Freq</b> The Nth compensation current amplitude is constant (defined by <a href="#">Par 595</a> [Nth Amplitude]) up to this frequency, then linearly reduced to zero at the frequency of <a href="#">Par 534</a> + 6.25%. Note: This parameter was added for firmware version 5.002.	Default: Min/Max: Scaling:	819 0/32767 4096/ <a href="#">Par 3</a> [Motor NP Hertz]		RW	16-bit Integer																																																							
535 <div>A</div>	<b>Mth CompOff Freq</b> The Mth compensation current amplitude is constant (defined by <a href="#">Par 598</a> [Mth Amplitude]) up to this frequency, then linearly reduced to zero at the frequency of <a href="#">Par 535</a> + 6.25%. Note: This parameter was added for firmware version 5.002.	Default: Min/Max: Scaling:	819 0/32767 4096/ <a href="#">Par 3</a> [Motor NP Hertz]		RW	16-bit Integer																																																							
537 <div>A</div>	<b>SrLssAngleStblty</b> Adjusts the electrical angle to maintain stable motor operation. An increase in the value increases the angle adjustment.	Default: Min/Max:	51.0 0.0/32767.0		RW	16-bit Integer																																																							
538 <div>A</div>	<b>SrLss VoltStblty</b> Adjusts the voltage to maintain stable motor operation. An increase in the value increases the output voltage adjustment.	Default: Min/Max:	93.0 0.0/32767.0		RW	16-bit Integer																																																							
539 <div>A</div>	<b>SrLss StbltyFilt</b> The coefficient is used to adjust the bandwidth of a low pass filter. The smaller the value of the coefficient, the lower the bandwidth of the filter.	Default: Min/Max:	3250.0 0.0/32767.0		RW	16-bit Integer																																																							
540	<b>V/Hz Status</b> Indicates the limit status of the V/Hz Control Operation. Note: This parameter was added form firmware version 2.003.  <table><tr><td>Options</td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Reserved</div></td><td><div>Bus Volt Lim</div></td><td><div>Current Lim</div></td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td><td></td><td></td></tr></table> <div>0 = False 1 = True</div>	Options	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Bus Volt Lim</div>	<div>Current Lim</div>	Default	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0					
Options	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Reserved</div>	<div>Bus Volt Lim</div>	<div>Current Lim</div>

Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0																																													
541 <div>A</div>	<b>SrLss Angl Comp</b> Not currently used. Note: This parameter was added for future use - not active for use with firmware version 2.003 and above.	Default: Min/Max:	0.0 +/- 16384		RW	16-bit Integer																																																							
542 <div>A</div>	<b>SrLss Volt Comp</b> Not currently used. Note: This parameter was added for future use - not active for use with firmware version 2.003 and above.	Default: Min/Max: Units:	100.0 +/- 1000.0 V		RW	16-bit Integer																																																							
544 <div></div>	<b>External DB Res</b> Sets the resistance value of an external dynamic braking resistor. This value is used to determine the power applied to the resistor and thus calculate its temperature. Note: This parameter was added for firmware version 4.001.	Default: Min/Max: Units:	49.0 0.1/500.0 Ohm		RW	Real																																																							

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																																																																					
545 A	<b>Bus Reg Ki</b> Sets the responsiveness of the bus regulator. Note: This parameter was added for firmware version 2.003.	Default: Min/Max:	450.0 0.0/100000		RW	16-bit Integer																																																																																																					
546 A	<b>Bus Reg Kp</b> Proportional gain for the bus regulator. Used to adjust regulator response. Note: This parameter was added for firmware version 2.003.	Default: Min/Max:	1500.0 0.0/10000.0		RW	16-bit Integer																																																																																																					
547 A	<b>Bus Reg Kd</b> Derivative gain for the bus regulator. Used to control regulator overshoot. Note: This parameter was added for firmware version 2.003.	Default: Min/Max:	1000.0 0.0/10000.0		RW	16-bit Integer																																																																																																					
548 A	<b>Bus Reg ACR Kp</b> This proportional gain, in conjunction with <a href="#">Par 545</a> [Bus Reg Ki], adjusts the output frequency of the drive during a bus limit or inertia ride through condition. The output frequency is adjusted in response to an error in the active, or torque producing, current to maintain the active bus limit, or inertia ride through bus reference. A larger value of gain reduces the dynamic error of the active current. Note: This parameter was added for firmware version 2.003.	Default: Min/Max:	225.0 0.0/100000		RW	16-bit Integer																																																																																																					
549	<b>Vuv Fdbk Offset</b> Displays the motor U phase to V phase offset voltage from the voltage feedback circuit. The value of the offset is a uni-polarity signal. A zero offset is equal to 16384. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	16384.0 15764.0/17004.0		RW	16-bit Integer																																																																																																					
550	<b>Vvw Fdbk Offset</b> Displays the motor V phase to W phase offset voltage from the voltage feedback circuit. The value of the offset is a uni-polarity signal. A zero offset is equal to 16384. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	16384.0 15764.0/17004.0		RW	16-bit Integer																																																																																																					
551 A	<b>CurrFdbk AdjTime</b> Compensates for current feedback delays in High Horse Power drives (frames 9 and up). Note: This parameter was added for firmware version 3.001.	Default: Min/Max: Units:	0.0 0.0/50.0 µs		RW	16-bit Integer																																																																																																					
552 A	<b>Slip Preload Val</b> The Slip Gain value to be pre-loaded if the drive is powered down. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	120.0 0.0/8192.0		RW	32-bit Integer																																																																																																					
553 A	<b>Slip Slew Rate</b> Sets the rate at which the Slip Gain Regulator output transitions from the inactive state to the active state. Notes: This parameter was added for firmware version 3.001. The default value was changed from “2.000” to “0.200” for firmware version 4.001.	Default: Min/Max: Units:	0.200 0.010/16.383 µs		RW	Real																																																																																																					
554	<b>LED Status</b> Used to monitor LED statuses including the main controller, SynchLink and DriveLogix5370 from a HIM or an application program (e.g., DriveExplorer™). This feature is only available with DriveLogix version 15.03 or later. <ul style="list-style-type: none"><li>• Bit 0 “Sts Active” - Drive running, no faults are present.</li><li>• Bit 1 “Sts Ready” - Drive ready, but not running &amp; no faults are present.</li><li>• Bit 2 “Sts HW Fault” - A non-resettable fault has occurred in the drive.</li><li>• Bit 3 “Sts Fault” - A fault has occurred in the drive.</li><li>• Bit 4 “Sts Alarm” - A type 1 (user configurable) alarm condition exists, but the drive continues to run.</li><li>• Bit 5 “Sts RunInhbt” - A type 2 (non-configurable) alarm condition exists, drive continues to run.</li><li>• Bit 6 “Sync InSync” - The module is configured as the time keeper or the module is configured as a follower and synchronization is complete.</li><li>• Bit 7 “Sync NotSync” - The follower(s) are not configured with the time keeper.</li><li>• Bit 8 “DL Run Mode” - The controller is in “Run” mode.</li><li>• Bit 9 “DL Force Act” - I/O forces are active (enabled) but may or may not exist.</li><li>• Bit 10 “DL ForceNtEn” - One or more input or output addresses have been forced to an On or Off state, but the forces have not been enabled.</li><li>• Bit 11 “DL Battery” - Either the battery is not installed or 95% discharged and should be replaced.</li><li>• Bit 12 “DL I/O Activ” - The controller is communicating with all the devices in its I/O configuration.</li><li>• Bit 13 “DL I/O Alarm” - One or more devices in the I/O configuration of the controller are not responding.</li><li>• Bit 14 “DL I/O Fault” - The controller is not communicating to any devices and is faulted.</li><li>• Bit 15 “DL ComActive” - RS-232 activity.</li><li>• Bit 16 “DL Fault” - The controller detected a non-recoverable fault, so it cleared the project from memory.</li><li>• Bit 17 “DL NotActive” - If the controller is a new, then it requires a firmware update, or if the controller is not new, a major fault occurred.</li><li>• Bit 18 “DL OK” - Controller is OK.</li><li>• Bit 19 “DL Loading” - The controller is storing or loading a project to or from nonvolatile memory.</li><li>• Bit 20 “DL CF Flash” - The controller is reading from or writing to the CompactFlash™ card.</li><li>• Bit 21 “DL CF Format” - The CompactFlash memory is not initialized.</li><li>• Bit 22 “DL CF Error” - CompactFlash card does not have a valid file system.</li></ul> Note: This parameter was added for firmware version 3.001.

No.	Name Description	Values	Linkable	Read-Write	Data Type
558	<b>Trend State</b> Value indicates the state of the Data Trend function. <ul style="list-style-type: none"> <li>Value 0 - Wait Enable indicates the trend function is ready and waiting to begin data collection. Setting bit 0 "Enbl Collect" of <a href="#">Par 556</a> [Trend Control] will cause data collection to begin. In this state, <a href="#">Par 569</a> [TrendBuffPointer] and the Trend Output Parameters are active.</li> <li>Value 1 - First Scan indicates the Trend function is executing the first pass through the trend sample buffer. This takes 512 ms. (0.5 ms x 1024 samples). When it enters this state, the Trend function clears bit 1 "Triggered" and 2 "Complete" bits of <a href="#">Par 557</a> [Trend Status]. While in this state, the Trend function refreshes the data. Also while in this state, the function forces the Trend Output parameters to zero. When done, it enters the Pre-trigger state.</li> <li>Value 2 - Pre-trigger indicates the Trend function is sampling the trend inputs and storing them in memory, at a rate determined by <a href="#">Par 559</a> [Trend Rate]. Sampling continues until either the trend trigger event occurs or bit 0 "Enbl Collect" of <a href="#">Par 556</a> [Trend Control] is cleared. While in this state, the Trend function forces the Trend Output parameters to zero. If the trigger event occurs, the function sets bit 1 "Triggered" of <a href="#">Par 557</a> [Trend Status] and enters the Post-trigger state. If bit 0 "Enbl Collect" of Parameter 556 [Trend Control] is cleared, the function sets bit 2 "Complete" of <a href="#">Par 557</a> [Trend Status] and returns to the Wait Enable state.</li> <li>Value 3 - Post-trigger indicates the Trend function is continuing to sample and save the trend inputs until the buffer is full. While in this state, the function forces the Trend Output parameters to zero value. When the buffer is full, the function sets bit 2 "Complete" of <a href="#">Par 557</a> [Trend Status] and enters the Wait Disable state.</li> <li>Value 4 - Wait Disable indicates the Trend function is complete and waiting for bit 0 "Enbl Collect" of <a href="#">Par 556</a> [Trend Control] to be cleared. When this is done, the trend function returns to the Wait Enable state. While in the Wait Disable state, <a href="#">Par 569</a> [TrendBuffPointer] and the Trend Output Parameters are active.</li> </ul>	Default: 0 = "Wait Enable" Options: 0 = "Wait Enable" 1 = "First Scan" 2 = "Pre-trigger" 3 = "Post-trigger" 4 = "Wait Disable"			
		<pre> graph TD     Val0[Val 0 Wait Enable] -- "Enbl Collect" --&gt; Val1[Val 1 First Scan]     Val1 -- "Done" --&gt; Val2[Val 2 Pre-Trigger]     Val2 -- "Trigger Event" --&gt; Val3[Val 3 Post-Trigger]     Val3 -- "Buffer Full" --&gt; Val4[Val 4 Wait Disable]     Val4 -- "Enbl Collect" --&gt; Val0           </pre>			
559	<b>Trend Rate</b> Sets the sample time for both trend input and output updates.	Default: 0.5000 Min/Max: 0.5000/1000.0000 Units: ms	Y	RW	Real
560	<b>Trend TrigA DInt</b> Provides the integer input for the A trigger function. This integer is converted to a real number and summed with <a href="#">Par 561</a> [Trend TrigA Real]. The result is compared with the Trigger B sum. If the A sum exceeds the B sum, then a trend trigger will occur.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
561	<b>Trend TrigA Real</b> Provides the real input for the A trigger function. This real number is summed with <a href="#">Par 560</a> [Trend TrigA Int]. The result is compared with the Trigger B sum. If the A sum exceeds the B sum, then a trend trigger will occur.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
562	<b>Trend TrigB DInt</b> Provides the integer input for the B trigger function. This integer is converted to a real number and summed with <a href="#">Par 563</a> [Trend TrigB Real]. The result is compared with the Trigger A sum. If the A sum exceeds the B sum, then a trend trigger will occur.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
563	<b>Trend TrigB Real</b> Provides the real input for the B trigger function. This real number is summed with <a href="#">Par 562</a> [Trend TrigB Int]. The result is compared with the Trigger A sum. If the A sum exceeds the B sum, then a trend trigger will occur.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
564	<b>Trend Trig Data</b> This is the logic input for the Trend Trigger Function. A trigger will occur on the rise of the specified bit in this word. The bit will be specified by <a href="#">Par 565</a> [Trend Trig Bit].	Default: 00000000000000000000000000000000 Min: 00000000000000000000000000000000 Max: 11111111111111111111111111111111	Y	RW	32-bit Boolean
565	<b>Trend Trig Bit</b> Specifies the bit in <a href="#">Par 564</a> [Trend Trig Data] that will cause a Trend Trigger to occur. Positive numbers specify rising edges and negative numbers specify falling edges.	Default: 0 Min/Max: -32/31	Y	RW	16-bit Integer
566	<b>Trend PreSamples</b> Specifies the number pre-trigger samples in the trend buffer. Pre-trigger samples are the samples that occur before the trigger and remain in the buffer. The remainder of the trend buffer will contain post-trigger samples.	Default: 511 Min/Max: 0/1022	Y	RW	16-bit Integer
567	<b>Trend Mark DInt</b> Marks the start of data for trend buffers that are using integer data. The Trend Marker can be used to provide a scope trigger signal for the Auto Output function.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
568	<b>Trend Mark Real</b> Marks the start of data for trend buffers that are using real data. The Trend Marker can be used to provide a scope trigger signal for the Auto Output function.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
569	<b>TrendBuffPointer</b> Selects the trend buffer element to be displayed in the Trend Output Parameters when the trend function is inactive (not collecting data samples). A zero value points to the element that corresponds to the trigger event. Negative values point to pre-trigger data. Positive values point to post-trigger data. When the Auto Output function is running, this parameter will automatically sequence through it's full range, at a rate set by <a href="#">Par 559</a> [Trend Rate].	Default: 0 Min/Max: -/+1023	Y	RW	16-bit Integer
570	<b>Trend In1 DInt</b> Provides integer input to the Trend 1. The Trending function samples this parameter for Trend Buffer 1, if bit 1 "In 1 Real" is cleared.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
571	<b>Trend In1 Real</b> Provides real input to the Trend 1. The Trending function samples this parameter for Trend Buffer 1, if bit 1 “In 1 Real” is set.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
572	<b>Trend Out1 DInt</b> Displays the output for Trend Buffer 1, if the buffer is using integer data. This will equal the value of the element, in Trend Buffer 1, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
573	<b>Trend Out1 Real</b> Displays the output for Trend Buffer 1, if the buffer is using real data. This will equal the value of the element, in Trend Buffer 1, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
574	<b>Trend In2 DInt</b> Provides integer input to the Trend 2. The Trending function samples this parameter for Trend Buffer 2, if bit 2 “In 2 Real” is cleared.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
575	<b>Trend In2 Real</b> Provides real input to the Trend 2. The Trending function samples this parameter for Trend Buffer 2, if bit 2 “In 2 Real” is set.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
576	<b>Trend Out2 DInt</b> Displays the output for Trend Buffer 2, if the buffer is using integer data. This will equal the value of the element, in Trend Buffer 2, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
577	<b>Trend Out2 Real</b> Displays the output for Trend Buffer 2, if the buffer is using real data. This will equal the value of the element, in Trend Buffer 2, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
578	<b>Trend In3 DInt</b> Provides integer input to the Trend 3. The Trending function samples this parameter for Trend Buffer 3, if bit 3 “In 3 Real” is cleared.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
579	<b>Trend In3 Real</b> Provides real input to the Trend 3. The Trending function samples this parameter for Trend Buffer 3, if bit 3 “In 3 Real” is set.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
580	<b>Trend Out3 DInt</b> Displays the output for Trend Buffer 3, if the buffer is using integer data. This will equal the value of the element, in Trend Buffer 3, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
581	<b>Trend Out3 Real</b> Displays the output for Trend Buffer 3, if the buffer is using real data. This will equal the value of the element, in Trend Buffer 3, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
582	<b>Trend In4 DInt</b> Provides integer input to the Trend 4. The Trending function samples this parameter for Trend Buffer 4, if bit 4 “In 4 Real” is cleared.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
583	<b>Trend In4 Real</b> Provides real input to the Trend 4. The Trending function samples this parameter for Trend Buffer 4, if bit 4 “In 4 Real” is set.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
584	<b>Trend Out4 DInt</b> Displays the output for Trend Buffer 4, if the buffer is using integer data. This will equal the value of the element, in Trend Buffer 4, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
585	<b>Trend Out4 Real</b> Displays the output for Trend Buffer 4, if the buffer is using real data. This will equal the value of the element, in Trend Buffer 4, specified by <a href="#">Par 569</a> [TrendBuffPointer].	Default: 0 Min/Max: -/+2200000000.0000		RO	Real
586	<b>IdsCmd Slew Rate</b> Defines the slew rate for the torque producing voltage (Vqs) regulator. The output variation is limited by one count every Par 586 / 16 sec. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 5.000 Min/Max: 0.000/16.383 Units: s		RW	Real
587	<b>SlipReg Err Lmt</b> Defines the error level at which the slip regulator input becomes active. When the error level reaches the value specified in this parameter and the error count condition (specified in <a href="#">Par 589</a> [Err Count Lmt]) is met, the drive control will transition from the slew rate limit mode to normal operation of the slip regulator. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer
588	<b>VqsReg Err Lmt</b> Defines the error level at which the Flux Producing Voltage (Vqs) regulator input becomes active. When the error level reaches the value specified in this parameter and the error count condition (specified in <a href="#">Par 589</a> [Err Count Lmt]) is met, the drive control will transition from the slew rate limit mode to normal operation of the Vqs regulator. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer
589	<b>Err Count Lmt</b> Defines the control loop counts limit, where the counter counts up if the error level of the Vqs regulator input is equal to the error level during Flux Producing Current (Ids) command Slew Rate operation. When the counter exceeds the value of this parameter then the normal Vqs regulator operation becomes active. The same limit of control loop counts is applied to the Slip Slew Rate operation, where the counter counts up if the error level of the Slip regulator input is equal to the error level during Slip Slew Rate operation. When the counter exceeds the value of this parameter then the normal Slip regulator operation becomes active. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
590	<b>RsTempCoefAdjust</b> The value specified in this parameter adjusts the temperature compensation coefficient which is calculated based on the Slip regulator output. A value of 4096 in this parameter doubles the compensation coefficient. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer
591	<b>RsTmpCoefAdjstEn</b> A value of “1” in this parameter enables the temperature compensation function in flux and torque estimate calculation, where the temperature information is based on the Slip regulator output. A value of “0” in this parameter disables the temperature compensation function. Notes: This value should not be changed. This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer
592	<b>VqsReg On Hyst</b> For Future Use. Note: This parameter was added for firmware version 4.001.	Default: 0 Min/Max: +/-32767		RW	16-bit Integer
593	<b>SlipReg On Hyst</b> For Future Use. Note: This parameter was added for firmware version 4.001.	Default: 0 Min/Max: -/+32767		RW	16-bit Integer
594	<b>Nth Torq Comp</b> Defines harmonic frequency as <n> times mechanical frequency. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: 0/1000		RW	16-bit Integer
595	<b>Nth Amplitude</b> Defines the compensation current amplitude for the Nth harmonic component. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: 0/4096 Scaling: 4096/ <a href="#">Par 2</a> [Motor NP FLA]		RW	16-bit Integer
596	<b>Nth Phase Shift</b> Defines the phase shift for the Nth harmonic component. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: -/+16384 Scaling: 16384/360 deg		RW	16-bit Integer
597	<b>Mth Torq Comp</b> Defines harmonic frequency as <m> times mechanical frequency. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: 0/1000		RW	16-bit Integer
598	<b>Mth Amplitude</b> Defines the compensation current amplitude for the Mth harmonic component. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: 0/4096 Scaling: 4096/ <a href="#">Par 2</a> [Motor NP FLA]		RW	16-bit Integer
599	<b>Mth Phase Shift</b> Defines the phase shift for the Mth harmonic component. Note: This parameter was added for firmware version 5.002.	Default: 0 Min/Max: -/+16384 Scaling: 16384/360 deg		RW	16-bit Integer
600	<b>Lgx Comm Format</b> Indicates the Controller to Drive communication format. Note: Option values 1...15 and 20...31 are “Reserved”	Default: 16 = “Speed Ctrl” Options: 0 = “Not Used” 18 = “UserDefin 1” 16 = “Speed Ctrl” 19 = “Motion” 17 = “PositionCtrl” 32 = “CustmUserDef”			
601	<b>From DL DataType</b> Sets the type of data for each word communicated from DriveLogix™ to the PowerFlex 700S drive. Setting a bit High will configure the associated word as a Real data type and setting the bit Low will configure it for Integer data type.				
	Options	Reserved Reserved Reserved Reserved Reserved Reserved Reserved Reserved Reserved Reserved Reserved Reserved DL 20 Real DL 19 Real DL 18 Real DL 17 Real DL 16 Real DL 15 Real DL 14 Real DL 13 Real DL 12 Real DL 11 Real DL 10 Real DL 09 Real DL 08 Real DL 07 Real DL 06 Real DL 05 Real DL 04 Real DL 03 Real DL 02 Real DL 01 Real DL 00 Real

0 = False  
1 = True

693

Interp SynchInput

Bit zero of this parameter is used as the synchronization pulse for the Interpolator. This parameter is linked to [Par 700](#) [Motn Posit Sync] for a Motion Servo Axis. It is linked to “Xsync Status” for a SynchLink application.  
Bits 1 - 4 have been changes to “Reserved” for firmware version 2.004.

Options

0 = False  
1 = True

694

Motn Mx Pos Trvl

Positive soft overtravel threshold for the Motion Servo Axis.

Default: 0  
Min/Max: -/+2147483648

RW

32-bit Integer

695

Motn Mx Neg Trvl

Negative soft overtravel threshold for the Motion Servo Axis.

Default: 0  
Min/Max: -/+2147483648

RW

32-bit Integer

696

Motn PositErrTol

Position error tolerance for the Motion Servo Axis.

Default: 4096  
Min/Max: 0/2147483648

RW

32-bit Integer

697

Motn PositLock Tol

Position lock tolerance for the Motion Servo Axis.

Default: 0  
Min/Max: 0/2147483648

RW

32-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																						
712	<b>Write Mask Act</b> Status of write access for DPI ports. When bit 15 "Security" is set, network security controls the write mask instead of <a href="#">Par 669</a> [Write Mask]. 717	<b>PLL TP Select</b> Phase Locked Loop test point selection. Note: This parameter was added for firmware version 3.001.	<div>Default: 0 = "Zero"</div> <div>Options: 0 = "Zero" 15 = "Vel Lpf In" 1 = "Bg Once" 16 = "Vel Lpf Out" 2 = "Position Err" 17 = "k1" 3 = "X to V" 18 = "k2" 4 = "Dt" 19 = "k3" 5 = "Gain" 20 = "pi" 6 = "Pos Intg" 21 = "Ve Enable" 7 = "Cal" 22 = "Ve In" 8 = "Epr Cal" 23 = "Ve Out" 9 = "Num" 24 = "Ve AnaPlsScl" 10 = "Denom" 25 = "Ve Whl Accum" 11 = "Egr Ratio" 26 = "Ve Frc AccmF" 12 = "A Comp" 27 = "Ve Frc AccmI" 13 = "H Comp" 28 = "Ve Dt" 14 = "Pos Lpf Out"</div>																																																									
718	<b>PLL TP DataInt</b> Test point integer data. This data is meaningful only if the selection at <a href="#">Par 717</a> [PLL TP Select] is integer data. Note: This parameter was added for firmware version 3.001.	<div>Default: 0</div> <div>Min/Max: -/+2147483648</div>		RO	32-bit Integer																																																						
719	<b>PLL TP DataReal</b> Test point real data. This data is meaningful only if the selection at <a href="#">Par 717</a> [PLL TP Select] is not integer data. Note: This parameter was added for firmware version 3.001.	<div>Default: 0.0</div> <div>Min/Max: -/+22000000000.0000</div>		RO	Real																																																						
720	<b>PLL Control</b> Phase Locked Loop Control. Bit 0 "Vel FdFwd En" - When set, enables the velocity feed forward path. When cleared, the feed forward path is disabled. Bit 1 "Ext Vel In" - When set, enables external velocity feed forward through <a href="#">Par 728</a> [PLL Ext Spd Ref]. When cleared, velocity feed forward is derived from the input device position. Bit 2 "Trcking AComp" - When set, provides an element of acceleration compensation to the feed forward branch. This is not recommended for use with external inputs because of increased noise. Note: This parameter was added for firmware version 3.001.	<table><tr><th>Options</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Trcking HComp</th><th>Trcking AComp</th><th>Ext Vel In</th><th>Vel FdFwd En</th></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td><td></td></tr></table> <div>0 = False 1 = True</div>	Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Trcking HComp	Trcking AComp	Ext Vel In	Vel FdFwd En	Default	x	x	x	x	x	x	x	x	x	x	x	x	x	0	0	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

No.	Name Description	Values	Linkable	Read-Write	Data Type
721	<b>PLL Position Ref</b> Physical encoder position input. This parameter is normally linked directly to the encoder position of the device chosen for input to PLL. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
722	<b>PLL BandWidth</b> Sets the internal bandwidth response of the PLL function in (rad/sec). The setting for very noisy mechanical systems could range from 1 to 10 (rad/s) while well-behaved high line count input devices could range upwards of 100 (rad/s). Higher bandwidths will quickly resolve tracking errors while the lower bandwidths will take longer to settle into a steady state. Some adjustment will be necessary to effect the best compromise between noise and tracking response. Note: This parameter was added for firmware version 3.001.	Default: 20.00 Min/Max: 0.00/8000.00 Units: rad/s	Y	RW	Real
723	 <b>PLL Rev Input</b> Revolution of the input encoder. This parameter must be coordinated with <a href="#">Par 724</a> [PLL Rev Out] to resolve the gear-ratio between input revolutions and output (virtual) revolutions. The ratio of input to output revolutions can always be resolved into integer values and should be reduced to their lowest common factor. Note: This parameter was added for firmware version 3.001.	Default: 1 Min/Max: -/+ 1000000		RW	32-bit Integer
724	 <b>PLL Rev Output</b> Revolution of the output encoder. This parameter must be coordinated with <a href="#">Par 723</a> [PLL Rev In] to resolve the gear-ratio between input revolutions and output (virtual) revolutions. The ratio of input to output revolutions can always be resolved into integer values and should be reduced to their lowest common factor. Note: This parameter was added for firmware version 3.001.	Default: 1 Min/Max: 1/2000000		RW	32-bit Integer
725	 <b>PLL EPR Input</b> Edges Per Revolution of the physical input device. Use highest line count device possible to insure smoother PLL operation. Note: This parameter was added for firmware version 3.001.	Default: 1048576 Min/Max: 1/67108864 Units: EPR		RW	32-bit Integer
726	 <b>PLL EPR Output</b> Edges Per Revolution of virtual the physical output device. Note: This parameter was added for firmware version 3.001.	Default: 1048576 Min/Max: 1/67108864 Units: EPR		RW	32-bit Integer
727	 <b>PLL VirtEncdrRPM</b> Revolutions per minute (rpm) of the virtual output device. The value specified determines the 1 P.U. velocity at <a href="#">Par 734</a> [PLL Speed Out] and does not otherwise affect performance. Note: This parameter was added for firmware version 3.001.	Default: 1750.0 Min/Max: 1.0/30000.0 Units: rpm		RW	Real
728	<b>PLL Ext Spd Ref</b> External Speed Reference. This is a velocity feed forward input. It is normally linked to an external velocity reference or the velocity output of the chosen physical encoder. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2200000000.0 Units: P.U.	Y	RW	Real
729	<b>PLL Ext SpdScale</b> External Speed Scale. This parameter is used to properly scale the velocity feed forward. Adjust for zero average at <a href="#">Par 733</a> [PLL FiltPositOut] while running at moderate speed. Note: This parameter was added for firmware version 3.001.	Default: 1.0 Min/Max: -/+2200000000.0	Y	RW	Real
730	<b>PLL LPFilter BW</b> Low Pass Filter BandWidth (BW). The filter has two functions: • Basic noise reduction of input velocity. • Timed delay of input when feed forward is linked to an external master reference other than an input encoder. The filter BW should be set for best tracking which occurs when the filter output coincides with the Loop filter output of PLL. Usually that means setting its BW to the bandwidth of the master reference drive. Note: This parameter was added for firmware version 3.001.	Default: 50.00 Min/Max: 0.00/8000.00 Units: rad/s	Y	RW	Real
731	<b>PLL Posit Out</b> Phased Locked Loop position output. This signal is precisely in phase with the input physical device. A link should be made to it from the local drive auxiliary position input. (The local drive is the one implementing PLL.) Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
732	<b>PLL Posit OutAdv</b> Phased Locked Loop position advanced output. This signal is one position sample in advance of <a href="#">Par 731</a> [PLL Posit Out]. A link is normally made to this parameter from SynchLink. Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
733	<b>PLL FiltPositOut</b> Phased Locked Loop internal low pass filter output. This parameter is normally used to properly scale an external velocity reference. See description of <a href="#">Par 729</a> [PLL Ext SpdScale]. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2200000000.0 Units: P.U.	Y	RW	Real
734	<b>PLL Speed Out</b> Phased Locked Loop velocity output. This signal is used as a velocity feed forward. It is precisely in phase with the physical input device. A link should be made to it from one of the inputs on the local drive. (The local drive is the one implementing PLL.) The 1 P.U. rpm of this parameter is set by <a href="#">Par 727</a> [PLL VirtEncdrRPM]. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2200000000.0 Units: P.U.	Y	RW	Real
735	<b>PLL SpeedOut Adv</b> Phase Locked Loop velocity advanced output. This signal is one velocity reference sample in advance of <a href="#">Par 734</a> [PLL Speed Out]. A link is normally made to this parameter from SynchLink. (Velocity reference is performed in the same task as the position regulator.) Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2200000000.0 Units: P.U.	Y	RW	Real

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																																											
737	<b>Posit TP Select</b> Enter or write a value to select position regulator data displayed in <a href="#">Par 738</a> [PositTP DataInt] and <a href="#">Par 739</a> [PositTP DataReal].	Default: 0 = "Zero" Options: 0 = "Zero" 9 = "Limiter Out" 1 = "del Xos Vout" 10 = "Ref EGR In" 2 = "del Xcmd" 11 = "OffsetSpdLim" 3 = "del Act Load" 12 = "Pt-Pt SpdLim" 4 = "del Act Mtr" 13 = "Sec per Edge" 5 = "Integ Error" 14 = "Edge per Sec" 6 = "Xprop Out" 15 = "Ratio Guess" 7 = "Fdbk Sel Alt" 16 = "Sync Count" 8 = "PreLim Xvout"																																																																																																																														
738	<b>PositTP DataInt</b> Displays the integer data selected by <a href="#">Par 737</a> [Posit TP Select]. This display should only be used if the selected value is Integer data.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																																																											
739	<b>PositTP DataReal</b> Displays the real data selected by <a href="#">Par 737</a> [Posit TP Select]. This display should only be used if the selected value is Real data.	Default: 0.0 Min/Max: -/+8.0 P.U.		RO	Real																																																																																																																											
740	<b>Position Control</b> Set bits to enable various position control functions. <ul style="list-style-type: none"><li>Setting bit 1 "Speed Out En" enables position regulator output at <a href="#">Par 318</a> [Posit Spd Output].</li><li>Setting bit 2 "Integ En" enables integrator operation. Resetting it resets the integrator.</li><li>Setting bit 3 "Integ Hold" holds integrator in present state.</li><li>Setting bit 4 "X Offset Pol" reverses polarity of offset parameters.</li><li>Setting bit 5 "XOffset Ref" permits changing the value of position offsets without changing actual position. Resetting it makes the position offset relative to the re-referenced value or the latched value upon enable if re-reference was not performed.</li><li>Bit 6 "AbsPositCtrl" may be set when a multi-turn, absolute feedback device is used for Point-to-Point positioning. Activating this bit will ReRef the position reference to the absolute feedback when position control is activated in bit 7 "Regulator On" of <a href="#">Par 741</a> [Position Status]. If the value at <a href="#">Par 758</a> [Pt-Pt Posit Ref] is different than the feedback in <a href="#">Par 763</a> [Position Actual], a position error will exist and the machine will move to position when activated. When bit 6 "AbsPositCtrl" is high, bit 9 "SetZeroPosit" of <a href="#">Par 740</a> [Position Control] may be used to set the zero "home" position accumulators. This can only be used when the drive is not in run and <a href="#">Par 740</a> [Position Control] bit 6 = 1 (true).</li><li>Setting bit 7 "AbsoluteMode" puts the position regulator in Absolute mode. When using the Homing function while in Absolute mode, the value in <a href="#">Par 758</a> [Pt-Pt Posit Ref] must be set relative to the value in <a href="#">Par 763</a> [Position Actual] after homing is complete. For example: When homing is complete <a href="#">Par 763</a> [Position Actual] = 1000 counts. If you want to move to an absolute position of 2000 counts relative to the home switch, you must enter a value of 3000 counts into <a href="#">Par 758</a> [Pt-Pt Posit Ref] (i.e., 1000 + 2000 = 3000). If you want to move back to the home switch, using the same value in <a href="#">Par 763</a> [Position Actual] after homing (1000), you must enter a value of 1000 into <a href="#">Par 758</a> [Pt-Pt Position Ref] (i.e., 0 + 1000 = 1000).</li><li>Setting bit 8 "Xzero Preset" presets <a href="#">Par 744</a> [PositRef EGR Out], <a href="#">Par 747</a> [Position Cmmnd], <a href="#">Par 763</a> [Position Actual] and <a href="#">Par 765</a> [Posit Actl Load] with the value in <a href="#">Par 762</a> [Position Fdbk] minus <a href="#">Par 757</a> [Abs Posit Offset] upon drive enable.</li><li>Setting bit 10 "Pt-Pt ReRef" enables setting or changing <a href="#">Par 758</a> [Pt-Pt Posit Ref] without changing the actual position.</li><li>Setting bit 16 "X Watch1 En" enables position Watch 1. Resetting it clears <a href="#">Par 741</a> [Position Status] bit 8 "Posit Watch1".</li><li>Setting bit 17 "X Watch1 Dir" causes Position Watch 1 output to be set when <a href="#">Par 763</a> [Position Actual] is greater than <a href="#">Par 780</a> [PositDtct1 Stpt]. Re-setting bit 17 causes Position Watch 1 output to be set when <a href="#">Par 763</a> [Position Actual] is less than <a href="#">Par 780</a> [PositDtct1 Stpt].</li><li>Setting bit 18 "X Watch2 En" enables position Watch 2. Resetting it clears <a href="#">Par 741</a> [Position Status] bit 9 "Posit Watch2".</li><li>Setting bit 19 "X Watch2 Dir" causes Position Watch 2 output to be set when <a href="#">Par 763</a> [Position Actual] is greater than <a href="#">Par 781</a> [PositDtct2 Stpt]. Re-setting bit 19 causes Position Watch 2 output to be set when <a href="#">Par 763</a> [Position Actual] is less than <a href="#">Par 781</a> [PositDtct2 Stpt].</li><li>Setting bit 20 "Pt-Pt RampStop" enables the Ramp to Stop function for point-to-point positioning. When reset and the stop command is given during a move, the drive will stop at 0 ramp time. When set and the stop command is given during a move, the rive will ramp to zero at <a href="#">Par 760</a> [Pt-Pt Decel Time]. Note: Coast Stop or Removing Enable always causes a Coast to Stop function.</li><li>Bit 24 "Find Home" - when this bit is on and the drive is started, a homing sequence is initiated.</li><li>Bit 25 "Pos Redefine" - when this bit is set the position will be set to zero.</li><li>Bit 26 "Home Dir" - when this bit is set the homing direction will be opposite of the Home Speed commanded in <a href="#">Par 1122</a> [Home Speed].</li><li>Bit 27 "Return Home" - when this bit is set the homing direction will be opposite of the Home Speed commanded in <a href="#">Par 1122</a> [Home Speed]. Note: The position reference will not change, but <a href="#">Par 763</a> [Posit Load Fdbk] will return to zero. The Position reference should also be redefined to zero to synchronize the position with the command. This can be useful for returning to Home after a jog type operation</li><li>Bit 28 "Home Switch" - when this bit is set the Homing sequence will look for the home switch to make a transition from it's current state when the homing sequence is started. Do not set with bit 29 "Home Marker".</li><li>Bit 29 "Home Marker" - when set, the Homing Sequence will look for the Marker pulse. When the marker pulse is found the drive will decelerate and return to the position where the marker was found. Do not set with bit 28 "Home Switch".</li></ul> Note: Bits 24 - 29 were added for future use - not active for use with firmware version 3.001 and above.

742	<b>Position Ref Sel</b> Enter a value to select the position mode and corresponding reference. Note: This parameter was changed to non-linkable for firmware version 3.001.	Default: 1 = "AuxPosit Ref" Options: 0 = "Interpolate" 2 = "Pt to Pt" 1 = "AuxPosit Ref"																																																																																																					
743	<b>Aux Posit Ref</b> Supplies position reference to the position regulator when selected by <a href="#">Par 742</a> [Posit Ref Sel] = 1. This input is designed to be linked to a position count accumulator such as a virtual encoder or hardware accumulator.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																																																																		
744	<b>PositRef EGR Out</b> Accumulated output of the position reference Electronic Gear Ratio (EGR). When the position regulator is not enabled, this parameter is initialized to <a href="#">Par 762</a> [Position Fdbk] or to the selected position reference as determined by <a href="#">Par 740</a> [Position Control] bit 6.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																																		
745	<b>PositRef EGR Mul</b> An integer value in the numerator of the EGR function that is precision multiplied by the selected position reference. A negative value will effect a change in polarity.	Default: 1 Min/Max: -/+2000000	Y	RW	32-bit Integer																																																																																																		
746	<b>PositRef EGR Div</b> An integer value in the denominator of the EGR function that divides into the product of the numerator and the selected position reference. Remainders are accumulated and not lost.	Default: 1 Min/Max: 1/2000000	Y	RW	32-bit Integer																																																																																																		
747	<b>Position Cmmd</b> Final accumulated command to the position regulator. When the position regulator is not enabled, this parameter is initialized to <a href="#">Par 762</a> [Position Fdbk] or to the selected position reference as determined by <a href="#">Par 750</a> [Position Control] bit 6. Thereafter, its value will reflect the result of reference and offset changes.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																																		
748	<b>CoarsePosit Trgt</b> Input to the interpolator. This is a coarse position target reference.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																																																																		
749	<b>Interp Position</b> Input to the interpolator. This is a fine position target reference.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																																		
750	<b>Coarse Spd Trgt</b> Input to the interpolator. This is a coarse speed target reference.	Default: 0 Min/Max: -/+2200000000.0000	Y	RW	Real																																																																																																		
751	<b>Interp Speed</b> Output from the interpolator. This is a fine speed target reference.	Default: 0 Min/Max: -/+8.0000 P.U.		RO	Real																																																																																																		
752	<b>Interp AccelRate</b> Output from interpolator. This is a fine acceleration rate. First derivative of <a href="#">Par 750</a> [Course Spd Trgt] if available, or zero (0) if not available.	Default: 0 Min/Max: -/+8.0000 P.U.		RO	Real																																																																																																		
753	<b>Posit Offset 1</b> Supplies a position reference offset, which is summed after the EGR and used to phase trim position reference. A step in the offset position will be internally rate limited and added to the selected reference position. The rate of correction is set by <a href="#">Par 755</a> [Posit Offset Spd]. The initial value of this parameter is latched upon position enable without causing a change in reference. Subsequent changes to this value will be relative to the latched value. See <a href="#">Par 740</a> [Position Control], bit 5 for re-referencing the offsets.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																																																																		
754	<b>Posit Offset 2</b> Supplies another position reference offset, which is summed with <a href="#">Par 753</a> [Posit Offset 1]. Used to trim the phase of the selected position reference. Position offset will be internally rate limited to a velocity set by <a href="#">Par 755</a> [Posit Offset Spd].	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																																																																		

No.	Name Description	Values	Linkable	Read-Write	Data Type
755	<b>Posit Offset Spd</b> Sets the speed of position offset. A position offset command will not exceed this speed. The actual speed of offset is limited to a maximum value of 1/(inertia x pos gain) so as not to cause a torque pulse greater than 1 per unit. The speed will change exponentially.	Default: 176.4000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
756	<b>X Offst SpdFilt</b> Displays the output of a first order filter whose time response is shaped specifically to provide an output that represents the actual speed of offset correction. It may be used as a feed forward into speed reference to secure minimal position error during changes to offset.	Default: 0.0000 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
757	<b>Abs Posit Offset</b> Provides an offset to absolute position. Setting <a href="#">Par 740</a> [Position Control], bit 8 "Xzero Preset" presets <a href="#">Par 744</a> [PositRef EGR Out], <a href="#">Par 747</a> [Position Cmmnd], <a href="#">Par 763</a> [Position Actual] and <a href="#">Par 765</a> [Posit Actl Load] with the value in <a href="#">Par 762</a> [Position Fdbk] minus <a href="#">Par 757</a> [Abs Posit Offset] upon drive enable.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
758	<b>Pt-Pt Posit Ref</b> Provides position reference to the point to point position regulator, when the value in <a href="#">Par 742</a> [Position Ref Sel] = 2 "Pt to Pt". The initial value is latched upon position enable without causing movement. Subsequent changes to reference are relative to the latched position unless the position is re-referenced by <a href="#">Par 740</a> [Position Control], bit 10 "Pt-Pt ReRef". Position moves may be made within the limits of plus or minus 31 bits. Point-to-point reference may be changed, and even reversed, during a move.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
759	<b>Pt-Pt Accel Time</b> Acceleration time (sec) to base speed, active only in point to point mode. Acceleration to a relatively low speed may be exponential.	Default: 10.0000 Min/Max: 0.1000/6553.5000 Units: s	Y	RW	Real
760	<b>Pt-Pt Decel Time</b> Deceleration time (sec) from base speed to zero, active only in point to point mode. Some tailing can be expected at the end of a move as the drive comes into command position. It is left to the user to select a time that does not place the drive in current or torque limit. Deceleration from relatively low speed may be exponential.	Default: 10.0000 Min/Max: 0.1000/6553.5000 Units: s	Y	RW	Real
761	<b>Pt-Pt Filt BW</b> Sets the bandwidth of a low pass filter which affects smoothness at the start of deceleration in the point to point mode. A high filter bandwidth will produce a more square deceleration torque, one with a higher level of jerk. Typical values range from 5 to 100 (rad/sec). A zero value will bypass the filter. Tail-out is influenced mainly by <a href="#">Par 768</a> [Posit Reg P Gain].	Default: 25.0000 Min/Max: 0.0000/500.0000 Units: rad/s	Y	RW	Real
762	<b>Position Fdbk</b> Displays the accumulated pulse count of the selected position feedback. Select a position feedback device with <a href="#">Par 777</a> [PositionFdbk Sel].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
763	<b>Position Actual</b> Displays the accumulated motor position as a 32-bit integer. It tracks <a href="#">Par 762</a> [Position Fdbk]. When the position regulator is not enabled, this parameter is initialized to <a href="#">Par 762</a> [Position Fdbk] or to the selected position reference as determined by <a href="#">Par 740</a> [Position Control], bit 6 "AbsPositCtrl".	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
764	<b>Posit Load Fdbk</b> Tracks the load position, as a 32-bit integer. When a gear box connects the load to the motor, <a href="#">Par 766</a> [Posit FB EGR Mul] and <a href="#">Par 767</a> [Posit FB EGR Div] must be set to account for the gear ratio. Set <a href="#">Par 766</a> [Posit FB EGR Mul] equal to <a href="#">Par 767</a> [Posit FB EGR Div] if the load is directly connected to the motor.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
765	<b>Posit Actl Load</b> Holds the accumulated output of the Load Gear Ratio as a 32-bit integer and forms the primary feedback for the position regulator integral channel. It is very important that the load gear ratio be precisely set such that the delta pulse count of one motor revolution equals the delta pulse count of this parameter. When the position regulator is not enabled, this parameter is initialized to <a href="#">Par 762</a> [Position Fdbk] or to the selected position reference as determined by <a href="#">Par 740</a> [Position Control], bit 6 "AbsPositCtrl".	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
766	<b>Posit FB EGR Mul</b> A 32-bit integer in the numerator of the load EGR function. It is multiplied by <a href="#">Par 764</a> [Posit Load Fdbk] and divided by <a href="#">Par 767</a> [Posit FB EGR Div] to reflect the load pulse count to the motor (effectively removing the gear box ratio). The accumulated position values <a href="#">Par 763</a> [Position Actual] and <a href="#">Par 765</a> [Posit Actl Load] will be equal if the ratio is set properly. There may be some difference due to lost motion in the gear train, but there should not be an accumulated difference. It is often necessary to count gear teeth as gear box manufacturers often approximate exact ratios with decimal numbers. Enter a negative value in the numerator to account for reversed motor rotation.	Default: 1 Min/Max: -/+1000000	Y	RW	32-bit Integer
767	<b>Posit FB EGR Div</b> This is a 32-bit integer that forms the denominator of the load EGR function.	Default: 1 Min/Max: 1/2000000		RW	32-bit Integer
768	<b>PositReg P Gain</b> Sets position regulator gain as measured from position error to speed reference. The gain number is identically equal to position regulator bandwidth in rad/sec. For example: A gain of 10 means that a per unit position error of 0.1 sec. will effect a 1.0 P.U. speed change (1 per unit position error is the distance traveled in 1 sec. at base motor speed). The maximum value of this parameter is typically 1/3 of the speed bandwidth (rad/sec) but may be set considerably higher with careful tuning of the speed regulator output lead/lag filter.	Default: 4.0000 Min/Max: 0.0000/200.0000 Units: rad/s	Y	RW	Real
769	<b>Position Error</b> Actual position error in motor pulse counts. When the position regulator is not enabled, this 32-bit integer register is initialized to zero. When the position regulator is enabled, this parameter contains the running value of position error, often referred to as "following error".	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type
770	<b>PositReg Integ</b> Sets position regulator integral gain as measured from position error to velocity reference. It has gain units of (per unit velocity/sec) / (per unit position) and is unit compatible with <a href="#">Par 768</a> [PositReg P Gain]. An integral gain of 25 means that a per unit position error of 0.1 sec will effect a 2.5 P.U. speed change per sec.  Note: 1 per unit position is the distance traveled in 1 sec. at base motor speed.	Default: 4.0000 Min/Max: 0.0000/1000.0000 Units: /S <sup>2</sup>	Y	RW	Real
771	<b>PositReg Droop</b> Position Droop limits the low frequency gain of the position regulators integral channel to a value of (1/droop). It provides a means to fine tune the stability for load mounted feedback devices where lost motion may cause a problem. Typically, position droop will have a value that is less than (1/position gain), perhaps even zero for tightly coupled loads. Position droop has a gain value of (per unit position) / (per unit speed). Note: 1 per unit position is the distance traveled in 1 sec. at base motor speed.	Default: 0.0000 Min/Max: 0.0000/0.2500	Y	RW	Real
772	<b>XReg Integ LoLim</b> The negative limit of the position regulator integral gain.	Default: -176.4000 Min/Max: -14112.0000/0.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
773	<b>XReg Integ HiLim</b> The positive limit of the position regulator integral gain.	Default: 176.4000 Min/Max: 0.0000/14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
774	<b>XReg Integ Out</b> The output of the position regulator integral channel after application of the limits. This output is set to zero if the integral gain is set to zero or the integrator is not enabled.	Default: 0 Min/Max: -/+14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.		RO	Real
775	<b>XReg Spd LoLim</b> The negative speed limit of total position regulator output. Point to point mode uses this parameter to set the reverse speed reference.	Default: -176.4000 Min/Max: -14112.0000/0.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
776	<b>XReg Spd HiLim</b> The positive speed limit of total position regulator output. Point to point mode uses this parameter to set the forward speed reference.	Default: 176.4000 Min/Max: 0.0000/14112.0000 Units: rpm Scale: <a href="#">Par 4</a> [Motor NP RPM] = 1.0 P.U.	Y	RW	Real
777	 <b>PositionFdbk Sel</b> Enter a value to select the position control feedback device. The feedback device used for position control may be an independent selection from the motor speed control feedback device in <a href="#">Par 222</a> [Mtr Fdbk Sel Pri] or <a href="#">Par 223</a> [Mtr Fdbk Sel Alt]. If the position feedback is to be the same as the motor feedback, select option 3 "Motor Fdbk". This option will set the selected feedback of <a href="#">Par 222</a> [Motor Fdbk Sel Pri] or <a href="#">Par 223</a> [Mtr Fdbk Sel Alt] as the position regulators position feedback.  Notes: Options 5 and 6 are only available when compatible feedback option card is installed. This parameter was changed to non-linkable for firmware version 3.001.	Default: 0 = "Encoder 0" Options: 0 = "Encoder 0"                      7 = "SL DirIntRx0" 1 = "Encoder 1"                      8 = "SL DirIntRx1" 2 = "Reserved"                      9 = "SL DirIntRx2" 3 = "Mtr Fdbk Pri"                      10 = "SL DirIntRx3" 4 = "Motor Sim" 5 = "FB Opt Port0" 6 = "FB Opt Port1"			
778	<b>X Notch Attenu</b> Sets the depth for the Position Notch Filter. Attenuation is the ratio of the output to the input at the notch frequency. An attenuation of 30 means that the notch output is 1/30th of the input at the specified frequency. Calculation: Attenuation = Input / Output  	Default: 50 Min/Max: 0/500	Y	RW	Real
779	<b>X Notch FiltFreq</b> Sets the center frequency of the Position Notch Filter.	Default: 0.0 Min/Max: 0.0/500.0 Units: Hz	Y	RW	Real
780	<b>PositDectct1 Stpt</b> Provides the set point for Position Watch 1. Position Watch 1 is enabled and configured with <a href="#">Par 740</a> [Position Control] bits 16 & 17. Position Watch 1 compares this value with <a href="#">Par 784</a> [Posit Dect1 In] and sets bit 8 "Posit Watch1" of <a href="#">Par 741</a> [Position Status] when the appropriate condition is satisfied.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
781	<b>PositDectct2 Stpt</b> Provides the set point for Position Watch 2. Position Watch 2 is enabled and configured with <a href="#">Par 740</a> [Position Control] bits 18 & 19. Position Watch 2 compares this value with <a href="#">Par 785</a> [Posit Dect2 In] and sets bit 9 "Posit Watch2" of <a href="#">Par 741</a> [Position Status] when the appropriate condition is satisfied.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
782	<b>In Posit BW</b> Sets the overall bandwidth of the In Position detector. The detector sets bit 10 "In Position" of <a href="#">Par 741</a> [Position Status], when <a href="#">Par 769</a> [Position Error] is within this bandwidth for a sufficient time, specified by <a href="#">Par 783</a> [In Posit Dwell]. A modest hysteresis count is added to the position bandwidth after the position error is within specified limits.	Default: 200 Min/Max: 0/1000000	Y	RW	32-bit Integer

[illegible]

No.	Name Description	Values		Linkable	Read-Write	Data Type																		
796	<div></div> <b>Posit Gear Ratio</b> Sets the load side gear ratio for position control. Adjust this value when the selection of <a href="#">Par 777</a> [PositionFdbk Sel] is not 3 “Motor Fdbk”. Calculation: Motor Encoder (Rpm) / Load Encoder (Rpm)  Note: This parameter was changed to non-linkable for firmware version 3.001. This parameter was changed to be linkable for firmware version 3.004.	Default: Min/Max:	1.00 0.00/9999.00	Y	RW	Real																		
797	<b>BasicIdx Step</b> Sets the amount added to or subtracted from <a href="#">Par 799</a> [BasicIdx Output] on a rising edge of <a href="#">Par 740</a> [Position Control], bit 12 “BscIdx Step”. Note that this value can be positive or negative.	Default: Min/Max:	0 -/+2147483648	Y	RW	32-bit Integer																		
798	<b>BasicIdx Preset</b> Sets the value to be moved into <a href="#">Par 799</a> [BasicIdx Output] when <a href="#">Par 740</a> [Position Control], bit 11 “BscIdx Enbl” and bit 14 “BscIdx Prst” are both on.	Default: Min/Max:	0 -/+2147483648	Y	RW	32-bit Integer																		
799	<div></div> <b>BasicIdx Output</b> Displays the output of the Position Index function.	Default: Min/Max:	0 -/+2147483648		RO	32-bit Integer																		
800	<b>Anlg In1 Data</b> Displays the scaled final value for Analog Input 1.	Default: Min/Max:	0.0000 -/+2200000000.0000		RO	Real																		
801	<b>Anlg In1 Value</b> Displays the actual input value at Analog Input 1. Analog Input 1 may be configured for voltage or current input signal. For proper selection of the input signal, the DIP switch S-5 and <a href="#">Par 821</a> [Analog I/O Units] must be set to match. <a href="#">Par 801</a> [Anlg In1 Value] is multiplied by the value in <a href="#">Par 802</a> [Anlg In1 Scale] to produce the input to the lead lag filter function.  <table><tr><td><b>Type of Input:</b></td><td colspan="2">Configurable, Voltage or Current</td></tr><tr><td><b>Polarity:</b></td><td colspan="2">Bi-Polar</td></tr><tr><td><b>Resolution:</b></td><td colspan="2">14 bit (-8191 to +8191)</td></tr><tr><td></td><td><b>DIP Switch</b></td><td><b>Analog I/O Units</b></td></tr><tr><td><b>AI 1 Voltage</b></td><td>S5-2 = Open</td><td>Par 821 Bit 0 = 0 (False)</td></tr><tr><td><b>AI 1 Current</b></td><td>S5-2 = Closed</td><td>Par 821 Bit 0 = 1 (True)</td></tr></table>	<b>Type of Input:</b>	Configurable, Voltage or Current		<b>Polarity:</b>	Bi-Polar		<b>Resolution:</b>	14 bit (-8191 to +8191)			<b>DIP Switch</b>	<b>Analog I/O Units</b>	<b>AI 1 Voltage</b>	S5-2 = Open	Par 821 Bit 0 = 0 (False)	<b>AI 1 Current</b>	S5-2 = Closed	Par 821 Bit 0 = 1 (True)	Default: Min/Max: Units:	0.0000 -/+20.0000 V/mA		RO	Real

Analog I/O Units

Use to configure the type of units (voltage or current) for the analog I/O.

- For analog input 1, configure bit 0 to match the selection of hardware switch S5-2; bit 0 set to "0" = V, or set to "1" = mA. Also, the units for Pars [801](#) [Anlg In1 Value], [802](#) [Anlg In1 Scale], and [803](#) [Anlg In1 Offset] will correspond to this setting.
- For analog input 2, configure bit 1 to match the selection of hardware switch S5-1; bit 1 set to "0" = V, or set to "1" = mA. Also, the units for Pars [807](#) [Anlg In2 Value], [808](#) [Anlg In2 Scale], and [809](#) [Anlg In2 Offset] will correspond to this setting.
- Bit 2 "Al3 Thermstr" configures analog input 3 for a thermistor input with range of 0 to 10V.
- For analog output 1, use bit 16 to configure Pars [835](#) [Anlg Out1 Scale], [836](#) [Anlg Out1 Zero], and [837](#) [Anlg Out1 Value] for voltage or current; bit 16 set to "0" = V, or set to "1" = mA.
- For analog output 2, use bit 17 to configure Pars [842](#) [Anlg Out2 Scale], [843](#) [Anlg Out2 Zero], and [844](#) [Anlg Out2 Value] for voltage or current; bit 16 set to "0" = V, or set to "1" = mA.

No hardware configuration is needed for the analog outputs.

823

DigIn Debounce

Sets the amount of de-bounce (filtering) for each digital input. This is used to remove unwanted on/off cycling (chatter) on the digital inputs caused by relay bounce. Each digital input de-bounce is configured separately from 0.5ms to 8.0ms. The bit selections are cumulative for each digital input (1 - 6).  
Example: bit 4 & 2 & 1 on = 5.5ms of de-bounce for digital input 1.

832	<b>Anlg Out1 DInt</b> Link this parameter to an integer source parameter that will control Analog Output 1.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																								
833	<b>Anlg Out1 Real</b> Link this parameter to a real (floating point) source parameter that will control Analog Output 1.	Default: 0.0000 Min/Max: -/+2200000000.0000.0000	Y	RW	Real																																																								
834	<b>Anlg Out1 Offset</b> Provides an offset for Analog Output 1 before the scaling and limit blocks in the Analog Output 1 function. This parameter value is summed with either <a href="#">Par 832</a> [Anlg Out1 DInt] or <a href="#">Par 833</a> [Anlg Out1 Real] at the beginning of the function.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																																																								
835	<b>Anlg Out1 Scale</b> Scales the range of the source parameter to the range of Analog Output 1. For example: If <a href="#">Par 831</a> [Anlg Out1 Sel] is set to 1 "Output Freq", the output frequency of the drive is 0 - 60Hz and you enter "6" in this parameter, <a href="#">Par 837</a> [Anlg Out1 Value] = 6Hz per 1V, or 0 - 60Hz. <a href="#">Par 832</a> [Anlg Out1 DInt] or <a href="#">Par 833</a> [Anlg Out1 Real] is multiplied by this number after the limit function. Note: The turn-off point for this parameter has been changed from ±0.001 to ±0.0001 for firmware version 4.002.	Default: 0.0000 Min/Max: -/+2200000000.0000 Units: /V	Y	RW	Real																																																								
836	<b>Anlg Out1 Zero</b> Applies an offset to the scaled value of Analog Output 1. This parameter is summed with the output of the scaling block. This sum produces <a href="#">Par 837</a> [Anlg Out1 Value]. Typically this value corresponds to 0V for Analog Output 1.	Default: 0.0000 Min/Max: -/+20.0000 Units: V	Y	RW	Real																																																								
837	<b>Anlg Out1 Value</b> Displays the voltage reference for Analog Output 1 before the digital to analog conversion.	Default: 0.0000 Min/Max: -/+10.0000 Units: V		RO	Real																																																								
838	<b>Anlg Out2 Sel</b> Identifies the signal used on Analog Output 2. If the desired signal is not available in the selection list, choose option 0 - "User Select" and link with <a href="#">Par 839</a> [Anlg Out2 DInt] or <a href="#">Par 840</a> [Anlg Out2 Real] to select the desired parameter for output. Refer to <a href="#">Par 831</a> for a list of parameters that correspond to the option selected in this parameter.	Default: 3 = "Output Curr" Options: 0 = "User Select" 14 = "Reserved" 1 = "Output Freq" 15 = "Motor TrqRef" 2 = "Sel Spd Ref" 16 = "MtrTrqCurRef" 3 = "Output Curr" 17 = "Speed Ref" 4 = "Trq Cur (Iq)" 18 = "Speed Fdbk" 5 = "% Motor Flux" 19 = "Torque Est" 6 = "Output Power" 20 = "Scl Spd Fdbk" 7 = "Output Volts" 21 = "RampedSpdRef" 8 = "DC Bus Volts" 22 = "Spd Reg Out" 9 = "PI Reference" 23 = "MOP Level" 10 = "PI Feedback" 24 = "Trend 1 DInt" 11 = "PI Error" 25 = "Trend 1 Real" 12 = "PI Output" 26 = "Trend 2 DInt" 13 = "Reserved" 27 = "Trend 2 Real"																																																											
839	<b>Anlg Out2 DInt</b> Link this parameter to an integer source parameter that will control Analog Output 2.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer																																																								
840	<b>Anlg Out2 Real</b> Link this parameter to a real (floating point) source parameter that will control Analog Output 2.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																																																								

No.	Name Description	Values	Linkable	Read-Write	Data Type
841	<b>Anlg Out2 Offset</b> Provides an offset for Analog Output 2 before the scaling and limit blocks in the Analog Output 2 function. This parameter value is summed with either <a href="#">Par 839</a> [Anlg Out2 DInt] or <a href="#">Par 840</a> [Anlg Out2 Real] at the beginning of the function.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
842	<b>Anlg Out2 Scale</b> Scales the range of the source parameter to the range of Analog Output 2. For example: If <a href="#">Par 838</a> [Anlg Out2 Sel] is set to 1 "Output Freq", the output frequency of the drive is 0 - 60Hz and you enter "6" in this parameter, <a href="#">Par 844</a> [Anlg Out2 Value] = 6Hz per 1V, or 0 - 60Hz. <a href="#">Par 839</a> [Anlg Out2 DInt] or <a href="#">Par 840</a> [Anlg Out2 Real] is multiplied by this number after the limit function. Note: The turn-off point for this parameter has been changed from $\pm 0.001$ to $\pm 0.0001$ for firmware version 4.002.	Default: 0.0000 Min/Max: -/+2200000000.0000 Units: /V	Y	RW	Real
843	<b>Anlg Out2 Zero</b> Applies an offset to the scaled value of Analog Output 2. This parameter is summed with the output of the scaling block. This sum produces <a href="#">Par 844</a> [Anlg Out2 Value]. Typically this value corresponds to 0V for Analog Output 2.	Default: 0.0000 Min/Max: -/+20.0000 Units: V	Y	RW	Real
844	<b>Anlg Out2 Value</b> Displays the voltage reference for Analog Output 2 before the digital to analog conversion.	Default: 0.0000 Min/Max: -/+10.0000 Units: V		RO	Real
845	<b>Dig Out1 Sel</b> Identifies the signal used on Digital Output 1. If the desired signal is not available in the selection list, choose option 0 - "User Select" and link with <a href="#">Par 846</a> [Dig Out1 Data] and <a href="#">Par 847</a> [Dig Out1 Bit] to select the desired parameter and bit for output.	Default: 3 = "Ready" Options: 0 = "User Select"      15 = "Torque Limit" 1 = "Not Fault"      16 = "Power Limit" 2 = "Not Alarm"      17 = "Fault" 3 = "Ready"      18 = "Alarm" 4 = "Running"      19 = "Command Dir" 5 = "Reserved"      20 = "Actual Dir" 6 = "Reserved"      21 = "Jogging" 7 = "Enable On"      22 = "In Position" 8 = "Active"      23 = "Posit Watch1" 9 = "At Speed"      24 = "Posit Watch2" 10 = "At Setpt 1"      25 = "Cmpr 1 A</=B" 11 = "Above Setpt 2"      26 = "Cmpr 1 A>=B" 12 = "At ZeroSpeed"      27 = "Cmpr 2 A</=B" 13 = "Speed Limit"      28 = "Cmpr 2 A>=B" 14 = "CurrentLimit"			
846	<b>Dig Out1 Data</b> Link a word to this parameter that will control Digital Output 1. The bit within the selected word that will control Digital Output 1 is set by <a href="#">Par 847</a> [Dig Out1 Bit].	Default: 00000000000000000000000000000000 Min: 00000000000000000000000000000000 Max: 11111111111111111111111111111111	Y	RW	32-bit Boolean
847	<b>Dig Out1 Bit</b> Selects the bit, from the word linked to <a href="#">Par 846</a> [Dig Out1 Data], that will change the status of Digital Output 1 (e.g., when <a href="#">Par 847</a> [Dig Out1 Bit] equals 0, bit 0 of <a href="#">Par 846</a> [Dig Out1 Data] will control Digital Output 1).	Default: 0 Min/Max: -32/31	Y	RW	16-bit Integer
848	<b>Dig Out1 On Time</b> Defines the amount of time between a False to True transition on the output status and the corresponding change in state of Digital Output 1. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or digital output will not change state. <a href="#">Par 848</a> [Dig Out1 On Time] can be disabled by setting the delay time to 0 (zero). Note: This parameter was added for firmware version 3.001.	Default: 0.00 Min/Max: 0.00/600.00 Units: s		RW	16-bit Integer
849	<b>Dig Out1 OffTime</b> Defines the amount of time between a True to False transition on the output status and the corresponding change in state of Digital Output 1. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or digital output will not change state. Note: This parameter was added for firmware version 3.001.	Default: 0.00 Min/Max: 0.00/600.00 Units: s		RW	16-bit Integer
850	<b>Dig Out2 Sel</b> Identifies the signal used on Digital Output 2. If the desired signal is not available in the selection list, choose option 0 - "User Select" and link with <a href="#">Par 851</a> [Dig Out2 Data] and <a href="#">Par 852</a> [Dig Out2 Bit] to select the desired parameter and bit for output.	Default: 8 = "Active" Options: 0 = "User Select"      15 = "Torque Limit" 1 = "Not Fault"      16 = "Power Limit" 2 = "Not Alarm"      17 = "Fault" 3 = "Ready"      18 = "Alarm" 4 = "Running"      19 = "Command Dir" 5 = "Reserved"      20 = "Actual Dir" 6 = "Reserved"      21 = "Jogging" 7 = "Enable On"      22 = "In Position" 8 = "Active"      23 = "Posit Watch1" 9 = "At Speed"      24 = "Posit Watch2" 10 = "At Setpt 1"      25 = "Cmpr 1 A</=B" 11 = "Above Setpt 2"      26 = "Cmpr 1 A>=B" 12 = "At ZeroSpeed"      27 = "Cmpr 2 A</=B" 13 = "Speed Limit"      28 = "Cmpr 2 A>=B" 14 = "CurrentLimit"			
851	<b>Dig Out2 Data</b> Link a word to this parameter that will control Digital Output 2. The bit within the selected word that will control Digital Output 2 is set by <a href="#">Par 852</a> [Dig Out2 Bit].	Default: 00000000000000000000000000000000 Min: 00000000000000000000000000000000 Max: 11111111111111111111111111111111	Y	RW	32-bit Boolean

No.	Name Description	Values	Linkable	Read-Write	Data Type
852	<b>Dig Out 2 Bit</b> Selects the bit, from the word linked to <a href="#">Par 851</a> [Dig Out 2 Data], that will change the status of Digital Output 2 (e.g., when <a href="#">Par 852</a> [Dig Out 2 Bit] equals 0, bit 0 of <a href="#">Par 851</a> [Dig Out 2 Data] will control Digital Output 2).	Default: 0 Min/Max: -32/31	Y	RW	16-bit Integer
853	<b>Dig Out2 On Time</b> Defines the amount of time between a False to True transition on the output status and the corresponding change in state of Digital Output 2. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or digital output will not change state. <a href="#">Par 853</a> [Dig Out2 On Time] can be disabled by setting the delay time to 0 (zero). Note: This parameter was added for firmware version 3.001.	Default: 0.00 Min/Max: 0.00/600.00 Units: s		RW	16-bit Integer
854	<b>Dig Out2 OffTime</b> Defines the amount of time between a True to False transition on the output status and the corresponding change in state of Digital Output 2. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or digital output will not change state. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: 0.0/600.00 Units: s		RW	16-bit Integer
855	<b>Rly Out3 Sel</b> Identifies the signal used on Digital Output 3. If the desired signal is not available in the selection list, choose option 0 - "User Select" and link with <a href="#">Par 856</a> [Rly Out3 Data] and <a href="#">Par 857</a> [Rly Out3 Bit] to select the desired parameter for output.	Default: 1 = "Not Fault" Options: 0 = "User Select" 15 = "Torque Limit" 1 = "Not Fault" 16 = "Power Limit" 2 = "Not Alarm" 17 = "Fault" 3 = "Ready" 18 = "Alarm" 4 = "Running" 19 = "Command Dir" 5 = "Reserved" 20 = "Actual Dir" 6 = "Reserved" 21 = "Jogging" 7 = "Enable On" 22 = "In Position" 8 = "Active" 23 = "Posit Watch1" 9 = "At Speed" 24 = "Posit Watch2" 10 = "At Setpt 1" 25 = "Cmpr 1 A</=B" 11 = "Above Setpt 2" 26 = "Cmpr 1 A>/=B" 12 = "At ZeroSpeed" 27 = "Cmpr 2 A</=B" 13 = "Speed Limit" 28 = "Cmpr 2 A>/=B" 14 = "CurrentLimit"			
856	<b>Rly Out3 Data</b> Link a word to this parameter that will control the Relay Output 3. The bit within the selected word that will control Relay Output 3 is set by <a href="#">Par 857</a> [Rly Out3 Bit].	Default: 00000000000000000000000000000000 Min: 00000000000000000000000000000000 Max: 11111111111111111111111111111111	Y	RW	32-bit Boolean
857	<b>Rly Out3 Bit</b> Selects the bit, from the word linked to <a href="#">Par 856</a> [Rly Out3 Data] that will change the status of the Relay Output 3 (e.g., when <a href="#">Par 857</a> [Rly Out3 Bit] equals 0, bit 0 of <a href="#">Par 856</a> [Rly Out3 Data] will control the Relay Output 3).	Default: 0 Min/Max: -32/31	Y	RW	16-bit Integer
858	<b>Rly Out3 On Time</b> Defines the amount of time between a False to True transition on the output status and the corresponding change in state of Relay Output 3. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or relay output will not change state. <a href="#">Par 858</a> [Rly Out3 On Time] can be disabled by setting the delay time to 0 (zero). Note: This parameter was added for firmware version 3.001.	Default: 0.00 Min/Max: 0.00/600.00 Units: s		RW	16-bit Integer
859	<b>Rly Out3 OffTime</b> Defines the amount of time between a True to False transition on the output status and the corresponding change in state of Relay Output 3. If a transition on an output condition occurs and starts the time delay and the output condition returns to its original state before the delay timer reaches the setpoint, the delay timer will be aborted and the corresponding output status or relay output will not change state. Note: This parameter was added for firmware version 3.001.	Default: 0.00 Min/Max: 0.00/600.00 Units: s		RW	16-bit Integer
<b>General BitSwap Description</b> The six (6) Bit Swap functions are used to replace one bit in a word with one bit from a different word. This is typically done to a control word where one bit in the control word is replaced by a bit from another word such as a digital input. Four (4) input parameters and one (1) output parameter are used to accomplish each Bit Swap function. Refer to the User Functions 1 block diagram on <a href="#">page 192</a> .					
860	<b>BitSwap 1A Data</b>	Default: 0	Y	RW	32-bit Boolean
865	<b>BitSwap 2A Data</b>	Min/Max: 32 bits of data			
870	<b>BitSwap 3A Data</b>				
875	<b>BitSwap 4A Data</b>				
880	<b>BitSwap 5A Data</b>				
885	<b>BitSwap 6A Data</b> This is the main word in which 1 bit will be edited. All of the data from this word except the selected bit in <a href="#">Par 861</a> [BitSwap 1A Bit] are passed to <a href="#">Par 864</a> [BitSwap 1 Result].				
861	<b>BitSwap 1A Bit</b>	Default: 0		RW	16-bit Integer
866	<b>BitSwap 2A Bit</b>	Min/Max: 0/31			
871	<b>BitSwap 3A Bit</b>				
876	<b>BitSwap 4A Bit</b>				
881	<b>BitSwap 5A Bit</b>				
886	<b>BitSwap 6A Bit</b> This parameter specifies the bit to be replaced in <a href="#">Par 860</a> [BitSwap 1A Data].				

No.	Name Description	Values	Linkable	Read-Write	Data Type
862 867 872 877 882 887	<b>BitSwap 1B Data</b> <b>BitSwap 2B Data</b> <b>BitSwap 3B Data</b> <b>BitSwap 4B Data</b> <b>BitSwap 5B Data</b> <b>BitSwap 6B Data</b> This parameter contains the word from which the replacement bit will be selected. Only the selected bit is passed to <a href="#">Par 864</a> [BitSwap 1 Result].	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean
863 868 873 878 883 888	<b>BitSwap 1B Bit</b> <b>BitSwap 2B Bit</b> <b>BitSwap 3B Bit</b> <b>BitSwap 4B Bit</b> <b>BitSwap 5B Bit</b> <b>BitSwap 6B Bit</b> This parameter specifies the bit from <a href="#">Par 862</a> [BitSwap 1B Data] that will replace the specified bit in <a href="#">Par 860</a> [BitSwap 1A Data] and be loaded to <a href="#">Par 864</a> [BitSwap 1 Result]. A negative bit selection may be used to invert the data. Use "-32" to invert the value of bit 0.	Default: 0 Min/Max: -32/+31		RW	16-bit Integer
864 869 874 879 884 889	<b>BitSwap 1 Result</b> <b>BitSwap 2 Result</b> <b>BitSwap 3 Result</b> <b>BitSwap 4 Result</b> <b>BitSwap 5 Result</b> <b>BitSwap 6 Result</b> This parameter contains the result of the Bit Swap operation.	Default: 0 Min/Max: 32 bits of data		RO	32-bit Boolean
892	<b>SL Comm TP Sel</b> Enter or write a value to select SynchLink™ data displayed by <a href="#">Par 893</a> [SL Comm TP Data].	Default: 0 = "Zero" Options: 0 = "Zero" 13 = "BufSeqErrTim" 1 = "SL MultA Src" 14 = "Rx Sys Rev" 2 = "SL Mult A In" 15 = "Tx Axis Size" 3 = "SL Mult B In" 16 = "Tx Dir Size" 4 = "SL Mult Out" 17 = "Tx Buf Size" 5 = "Rx Axis Size" 18 = "Tx Pkg Size" 6 = "Rx Dir Size" 19 = "Tx Seq Cnt" 7 = "Rx Buf Size" 20 = "Tx Index 0" 8 = "Rx Pkg Size" 21 = "Tx Index 1" 9 = "Rx Seq Cnt" 22 = "Tx Index 2" 10 = "Rx Index 0" 23 = "Rx Vendor ID" 11 = "Rx Index 1" 24 = "Rx ModuleTyp" 12 = "Rx Index 2" 25 = "Rx Serial #"			
893	<b>SL Comm TP Data</b> Displays data selected by <a href="#">Par 892</a> [SL Comm TP Sel].	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
894 <b>A</b>	<b>SL CRC Err Accum</b> Displays the total accumulated number of Cycle Redundancy Check (CRC) errors. Clearing a fault resets this accumulator. This data is visible on the SynchLink diagnostics tab of the Peer Communication window. Refer to the <i>SynchLink System Design Guide</i> , publication 1756-TD008, for PowerFlex 700S SynchLink topologies, hardware and wiring details.	Default: 0 Min/Max: 0/4294967296		RO	32-bit Integer
895 <b>A</b>	<b>SL CRC Error</b> Displays the number of CRC errors that occurred during the last test (last 8 ms). This data is visible on the SynchLink diagnostics tab of the Peer Communication window.	Default: 0 Min/Max: 0/4294967296		RO	32-bit Integer
896 <b>A</b>	<b>SL BOF Err Accum</b> Displays the total accumulated number of Beginning of Frame (BOF) errors. Clearing a fault resets this accumulator. This data is visible on the SynchLink diagnostics tab of the Peer Communication window.	Default: 0 Min/Max: 0/4294967296		RO	32-bit Integer
897 <b>A</b>	<b>SL BOF Error</b> Displays the number of BOF errors that occurred during the last test (last 8 ms). This data is visible on the SynchLink diagnostics tab of the Peer Communication window.	Default: 0 Min/Max: 0/4294967296		RO	32-bit Integer
898 <b>A</b>	<b>SL CRC Err Limit</b> Identifies the number of CRC errors per test (per 8 ms) allowed before the drive declares a SynchLink CRC Error exception event. Set this limit on the SynchLink diagnostics tab of the Peer Communication window.	Default: 2 Min/Max: 0/256		RW	32-bit Integer
899 <b>A</b>	<b>SL BOF Err Limit</b> The number of BOF errors per test (per 8 ms) allowed before the drive declares a SynchLink BOF Error exception event. Set this limit on the SynchLink diagnostics tab of the Peer Communication window.	Default: 2 Min/Max: 0/256		RW	32-bit Integer
900	<b>SynchLink Rev</b> Indicates the current revision of the local SynchLink Programmable Logic firmware.	Default: 0.1 Min/Max: 0.1/999.9		RO	16-bit Integer
901	<b>SL System Rev</b> Indicates the system revision of the SynchLink network. To be compatible on the network, all nodes must have the same major revision.	Default: 0.001 Min/Max: 0.001/999.999		RO	32-bit Integer

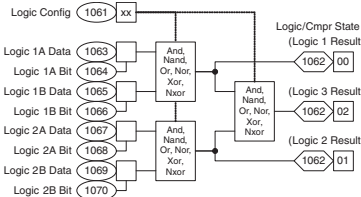

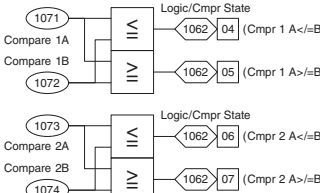

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																					
902 903	<b>SL Error Status</b> <b>SL Error History</b> Indicates the presence of SynchLink faults. This data is visible on the SynchLink diagnostics tab of the Peer Communication window. <ul style="list-style-type: none"><li>Bit 0 "Sync Loss" indicates SynchLink communication has failed, after it had been established.</li><li>Bit 1 "Rx Loss" indicates the receive port is not receiving data, and the receive port configuration is set to receive data.</li><li>Bit 2 "Many BOF Err" indicates the number of Beginning Of Frame (BOF) errors exceeds limit set by <a href="#">Par 899</a> [SL BOF Err Limit].</li><li>Bit 3 "Many CRC Err" indicates the number of Cyclic Redundancy Check (CRC) errors exceeds limit set by <a href="#">Par 893</a> [SL CRC Err Limit].</li><li>Bit 4 "Pckg Msg Err" indicates the received package sequence number has not matched for 1.0S.</li><li>Bit 5 "CommForm Err" indicates the format of received data does not match the configuration of the receive port.</li><li>Bit 6 "Sys Rev Err" indicates the system revision in the received data does not match the value of <a href="#">Par 900</a> [SynchLink Rev].</li><li>Bit 7 "Mult TKeeper" indicates more than one node on the SynchLink system is configured as a time keeper.</li></ul> <table><tr><td>Options</td><td></td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Mult TimeKpr</td><td>Sys Rev Err</td><td>Comm Fmt Err</td><td>Pckg Msg Err</td><td>Many CRC Err</td><td>Many BOF Err</td><td>Rx Loss</td><td>Sync Loss</td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td></td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>	Options		Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Mult TimeKpr	Sys Rev Err	Comm Fmt Err	Pckg Msg Err	Many CRC Err	Many BOF Err	Rx Loss	Sync Loss	Default	x	x	x	x	x	x	x	x	x	0	0	0	0	0	0	0	0	Bit		15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

917	<b>SL Rx P0 Regis</b> Displays received port 0 registration data, if direct received data is configured to be port 0 registration data by the Rx Direct Data Selector (Parameters <a href="#">905</a> ... <a href="#">909</a> ). Configure this selection by using the Peer Communication window.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																															
918	<b>SL Rx P1 Regis</b> Displays received port 1 registration data, if direct received data is configured to be port 1 registration data by the Rx Direct Data Selector (Parameters <a href="#">905</a> ... <a href="#">909</a> ). Configure this selection by using the Peer Communication window.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer																																																																																															
921	<b>SL Real2DInt In</b> Provides the floating point (real) input to the real to integer conversion function.	Default: 0.0000 Min/Max: -/+16.0000	Y	RW	Real																																																																																															
922	<b>SL Real2DInt Out</b> Displays the integer output of the real to integer conversion function. The value is the result of the formula: <a href="#">Par 921</a> [SL Real2DInt In] x <a href="#">Par 923</a> [SL Mult Base].	Default: 0 Min/Max: 0/65535		RO	16-bit Integer																																																																																															
923	 <b>SL Mult Base</b> Specifies the base for SynchLink real to integer and integer to real conversion functions. Determines the resolution of the conversion results. You must use the same value at the transmitting node and receiving / multiplying nodes. Enter a value that will not produce an overflow - the product of this value and the inputs to the conversion and multiply functions must be less than 65,536.	Default: 10000.0000 Min/Max: 0.2000/50000.0000		RW	Real																																																																																															
924	<b>SL Mult A In</b> Displays the A Multiplier Input, as a floating point (real) value. This value is divided by the <a href="#">Par 923</a> [SL Mult Base]. The source of the A Multiplier is determined by the Rx Direct Data Selector (Parameters <a href="#">905</a> - <a href="#">909</a> ). The possible sources are: zero, <a href="#">Par 1054</a> [MulDiv 1 Mul], <a href="#">Par 1056</a> [MulDiv 1 Result], <a href="#">Par 1058</a> [MulDiv 2 Mul], or <a href="#">Par 1060</a> [MulDiv 2 Result]. The SynchLink Multiply function takes this input before it is converted to floating point.	Default: 0.0000 Min/Max: 0.0000/65535.0000		RO	Real																																																																																															
925	<b>SL Mult B In</b> The B Multiplier Input. This must be a floating point (real) value. The SynchLink Multiply function takes this input after it is converted to integer.	Default: 1.0000 Min/Max: 0.25000/2.0000	Y	RW	Real																																																																																															
926	<b>SL Mult Out</b> Displays the output of the SynchLink Multiply function as a floating point (real) value. The value is the result of the formula: <a href="#">Par 924</a> [SL Mult A In] source (integer) x <a href="#">Par 925</a> [SL Mult B In] / <a href="#">Par 923</a> [SL Mult Base] or <a href="#">Par 924</a> [SL Mult A In] x <a href="#">Par 925</a> [SL Mult B In]. Note: The SynchLink Multiply function produces an output that is always positive.	Default: 0.0000 Min/Max: 0.0000/65535.0000		RO	Real																																																																																															

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																	
1000	<b>UserFunc Enable</b>  This parameter is used to enable and disable the optional user functions. If a bit is set the corresponding function is enabled. If the bit is not set the corresponding function is disabled and will not be processed (outputs will not be updated). Notes: Bit 16 "Ratio Calc" was added for firmware version 2.004. Bit 5 "AddSub Math" and bit 6 "Delay Timer" were added for firmware version 3.001. Bit 7 "EGR" (Electronic Gear Ratio) was added for firmware version 4.001.

If <a href="#">Par 1022</a> [Sel Switch Ctrl], bit 0 is not high the output will not be updated to the selected input. If this parameter does not update, check the setting of <a href="#">Par 1000</a> [UserFuncn Enable], bit 1 “User Params”.	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
1046	<b>SelSwTch DIntOut</b> This value is the value of <a href="#">Par 1045</a> [SelSwTch RealOut] converted to a DInt value. Use this value for point to point positioning values.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
1047	<b>DInt2Real1 In</b> Input value for a first DInt to Real value conversion. Note: This parameter name changed from [DInt2Real In] to [DInt2Real1 In] for firmware version 3.001.	Default: 0 Min/Max: -/+2147483648	Y	RW	32-bit Integer
1048	<b>DInt2Real1 Scale</b> Input value to scale the first conversion from DInt to Real. This is a multiplication to the input value after conversion to a Real value. Note: This parameter name changed from [DInt2Real Scale] to [DInt2Real1 Scale] for firmware version 3.001.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1049	<b>DInt2Real1Result</b> This is the resultant output of the first conversion from a DInt value to a Real value after scaling. Note: This parameter name changed from [DInt2RealResult] to [DInt2Real1Result] for firmware version 3.001.	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
1050	<b>Real2DInt In</b> Input value for Real to DInt value conversion.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1051	<b>Real2DInt Scale</b> Input value to scale the conversion from Real to DInt. This is a multiplication to the input value after conversion to a DInt value.	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1052	<b>Real2DInt Result</b> This is the resultant output of the conversion from a Real value to a DInt value after scaling.	Default: 0 Min/Max: -/+2147483648		RO	32-bit Integer
1053	<b>MulDiv 1 Input</b> Input value to be scaled as need with the Multiplication and Division function. This input will be multiplied by <a href="#">Par 1054</a> [MulDiv 1 Mul] and then divided by <a href="#">Par 1055</a> [MulDiv 1 Div]. The result will be loaded to <a href="#">Par 1056</a> [MulDiv 1 Result].  Equation: $(\text{Par } 1053 \times \text{Par } 1054) / \text{Par } 1055 = \text{Par } 1056$	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1054	<b>MulDiv 1 Mul</b> Set this value as the multiplier to the value of <a href="#">Par 1053</a> [MulDiv 1 Input]. The result will be divided by <a href="#">Par 1055</a> and loaded into <a href="#">Par 1056</a> . See <a href="#">Par 1053</a> .	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1055	<b>MulDiv 1 Div</b> Set this value as the divisor of the result of <a href="#">Par 1053</a> x <a href="#">Par 1054</a> . The result will be loaded into <a href="#">Par 1056</a> . See <a href="#">Par 1053</a> .	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1056	<b>MulDiv 1 Result</b> This is the result output from the Multiplication and Division function. See <a href="#">Par 1053</a> .  Equation: $\text{Par } 1056 = (\text{Par } 1053 \times \text{Par } 1054) / \text{Par } 1055$	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real
1057	<b>MulDiv 2 Input</b> Input value to be scaled as need with the Multiplication and Division function. This input will be multiplied by <a href="#">Par 1058</a> [MulDiv 2 Mul] and then divided by <a href="#">Par 1059</a> [MulDiv 2 Div]. The result will be loaded to <a href="#">Par 1060</a> [MulDiv 2 Result].  Equation: $(\text{Par } 1057 \times \text{Par } 1058) / \text{Par } 1059 = \text{Par } 1060$	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1058	<b>MulDiv 2 Mul</b> Set this value as the multiplier to the value of <a href="#">Par 1057</a> [MulDiv 2 Input]. The result will be divided by <a href="#">Par 1059</a> and loaded into <a href="#">Par 1060</a> . See <a href="#">Par 1057</a> .	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1059	<b>MulDiv 2 Div</b> Set this value as the divisor of the result of <a href="#">Par 1057</a> x <a href="#">Par 1058</a> . The result will be loaded into <a href="#">Par 1060</a> . See <a href="#">Par 1057</a> .	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
1060	<b>MulDiv 2 Result</b> This is the result output from the Multiplication and Division function. See <a href="#">Par 1057</a> .  Equation: $\text{Par } 1060 = (\text{Par } 1057 \times \text{Par } 1058) / \text{Par } 1059$	Default: 0.0000 Min/Max: -/+2200000000.0000		RO	Real

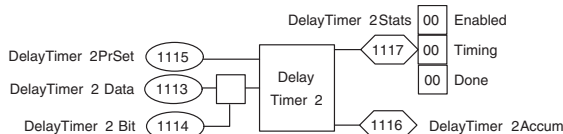

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																																																																				
1061	<b>Logic Config</b> Set this parameter to configure the logic routine in Pars 1063 - 1070. The result of this logic routine is displayed in <a href="#">Par 1062</a> [Logic/Cmpr State]. There are three configurable logic blocks as displayed below. Each block can be configured as (AND / NAND / OR / NOR / XOR / NXOR). Select the functions as desired. Multiple operation selection for one block will result in the first selection (least significant bit) being the active mode. 	<table><tr><th>Options</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Reserved</th><th>Logic 3 NXOR</th><th>Logic 3 XOR</th><th>Logic 3 NOR</th><th>Logic 3 OR</th><th>Logic 3 NAND</th><th>Logic 3 AND</th><th>Logic 2 NXOR</th><th>Logic 2 XOR</th><th>Logic 2 NOR</th><th>Logic 2 OR</th><th>Logic 2 NAND</th><th>Logic 2 AND</th><th>Logic 1 NXOR</th><th>Logic 1 XOR</th><th>Logic 1 NOR</th><th>Logic 1 OR</th><th>Logic 1 NAND</th><th>Logic 1 AND</th></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>31</td><td>30</td><td>29</td><td>28</td><td>27</td><td>26</td><td>25</td><td>24</td><td>23</td><td>22</td><td>21</td><td>20</td><td>19</td><td>18</td><td>17</td><td>16</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>	Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Logic 3 NXOR	Logic 3 XOR	Logic 3 NOR	Logic 3 OR	Logic 3 NAND	Logic 3 AND	Logic 2 NXOR	Logic 2 XOR	Logic 2 NOR	Logic 2 OR	Logic 2 NAND	Logic 2 AND	Logic 1 NXOR	Logic 1 XOR	Logic 1 NOR	Logic 1 OR	Logic 1 NAND	Logic 1 AND	Default	x	x	x	x	x	x	x	x	x	x	x	x	x	x	x	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	Bit	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

1063	<b>Logic 1A Data</b> Selects the data word for the first input to Logic Block 1. See <a href="#">Par 1061</a> [Logic Config].	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean																																																																																																				
1064	<b>Logic 1A Bit</b> Selects the bit of <a href="#">Par 1063</a> [Logic 1A Data] for the first input to Logic Block 1. Note: To invert the selected input enter the desired bit as negative. Use -32 to invert bit 0.	Default: 0 Min/Max: -31/32		RW	16-bit Integer																																																																																																				
1065	<b>Logic 1B Data</b> Selects the data word for the second input to Logic Block 1. See <a href="#">Par 1061</a> [Logic Config].	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean																																																																																																				
1066	<b>Logic 1B Bit</b> Selects the bit of <a href="#">Par 1065</a> [Logic 1B Data] for the second input to Logic Block 1. Note: To invert the selected input enter the desired bit as negative. Use -32 to invert bit 0.	Default: 0 Min/Max: -31/32		RW	16-bit Integer																																																																																																				
1067	<b>Logic 2A Data</b> Selects the data word for the first input to Logic Block 2. See <a href="#">Par 1061</a> [Logic Config]	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean																																																																																																				
1068	<b>Logic 2A Bit</b> Selects the bit of <a href="#">Par 1067</a> [Logic 2A Data] for the first input to Logic Block 2. Note: To invert the selected input enter the desired bit as negative. Use -32 to invert bit 0.	Default: 0 Min/Max: -31/32		RW	16-bit Integer																																																																																																				
1069	<b>Logic 2B Data</b> Selects the data word for the second input to Logic Block 2. See <a href="#">Par 1061</a> [Logic Config].	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean																																																																																																				
1070	<b>Logic 2B Bit</b> Selects the bit of <a href="#">Par 1069</a> [Logic 2B Data] for the second input to Logic Block 2. Note: To invert the selected input enter the desired bit as negative. Use -32 to invert bit 0.	Default: 0 Min/Max: -31/32		RW	16-bit Integer																																																																																																				
1071	<b>Compare 1A</b> Sets input A for the Compare 1 function. The compare function allows the user to compare two values. The results of the compare are displayed in <a href="#">Par 1062</a> [Logic/Cmpr State]. Available functions are ( A <= B, A >= B ).	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																																																																																																				
1072	<b>Compare 1B</b> Sets input B for the Compare 1. The compare functions allow the user to compare two values. The results of the compare are displayed in <a href="#">Par 1062</a> [Logic/Cmpr State]. Available functions are ( A <= B, A >= B ).	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																																																																																																				

No.	Name Description	Values	Linkable	Read-Write	Data Type																	
1073	<b>Compare 2A</b> Sets input A for the Compare 2. The compare functions allow the user to compare two values. The results of the compare are displayed in <a href="#">Par 1062</a> [Logic/Cmpr State]. Available functions are ( A <= B , A >= B ).	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	
1074	<b>Compare 2B</b> Sets input B for the Compare 2. The compare functions allow the user to compare two values. The results of the compare are displayed in <a href="#">Par 1062</a> [Logic/Cmpr State]. Available functions are ( A <= B , A >= B ).	Default: 0.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	
1086	<b>MOP Control</b> Motor Operated Potentiometer (MOP) control and configuration. <ul style="list-style-type: none"><li>• Bit 0 "Increase", if set, increments the MOP level (output) from <a href="#">Par 1087</a> [MOP Rate] to <a href="#">Par 1088</a> [MOP High Limit].</li><li>• Bit 1 "Decrease", if set, decrements the MOP level (output) from Par 1087 [MOP Rate] to <a href="#">Par 1089</a> [MOP Low Limit].</li><li>• Bit 2 "Reset", if set, resets the MOP level (output) to zero and bit 0 "Increment" and bit 1 "Decrease" are inhibited.</li><li>• Bit 3 "Reset @ Stop", if set, resets the MOP level (output) to zero when stop is set.</li><li>• Bit 4 "Reset @ PwrLs", if set, resets the MOP level (output) to zero when power is lost.</li></ul> Note: If either bit 3 or bit 4 is not set, the MOP level (output) will be saved until bit 2 "Reset" is set.  <table><tr><td>Options</td><td>Reset @ PwrLs</td><td>Reset @ Stop</td><td>Reset</td><td>Decrease</td><td>Increase</td></tr><tr><td>Default</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table>	Options	Reset @ PwrLs	Reset @ Stop	Reset	Decrease	Increase	Default	0	0	0	0	0	Bit	4	3	2	1	0			
Options	Reset @ PwrLs	Reset @ Stop	Reset	Decrease	Increase																	
Default	0	0	0	0	0																	
Bit	4	3	2	1	0																	
1087	<b>MOP Rate</b> Sets the rate of change (increment or decrement) for the MOP. The setting 0.1/sec will equate to an increment or decrement of 0.1 for every second active. If this is used for the speed reference, that equals 10% of base speed every second for a total of 10 seconds to reach base speed reference.	Default: 0.1000 s Min/Max: 0.0000/2200000000.0000 Units: s	Y	RW	Real																	
1088	<b>MOP High Limit</b> Sets the upper limit for the MOP output. The MOP cannot be incremented above this level.	Default: 1.0000 s Min/Max: 0.0000/2200000000.0000 Units: s	Y	RW	Real																	
1089	<b>MOP Low Limit</b> Sets the lower limit for the MOP output. The MOP cannot be decremented below this level.	Default: -1.0000 s Min/Max: -2200000000.0000/0.0000 Units: s	Y	RW	Real																	
1090	<b>MOP Level Real</b> Actual output value of the MOP as a real number. This value is also found in the speed reference selection. A value of 1.0 equals base motor speed.	Default: 0.0000 Min/Max: -/+2200000000.0000 Units: s		RO	Real																	
1091	<b>MOP Scale Dint</b> Set this value for scaling of the Dint MOP output. The MOP is calculated and controlled as a Real value MOP. Use this scaler to adjust for an integer value. Use this parameter to scale the conversion from <a href="#">Par 1090</a> [MOP Level Real] to <a href="#">Par 1092</a> [MOP Level Dint].	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	
1092	<b>MOP Level Dint</b> Actual output value of the MOP as a Dint number. This value is scaled by <a href="#">Par 1091</a> [MOP Scale Dint].	Default: 0.0000 Min/Max: -/+2147483648		RO	32-bit Integer																	
1093 1094 1095	<b>Anlg In1LossCnfg</b> <b>Anlg In2LossCnfg</b> <b>Anlg In3LossCnfg</b> Selects drive action when an analog input signal loss is detected. Signal loss is defined as an analog signal less than 1 V or 2 mA. The signal loss event ends and normal operation resumes when the input signal is greater than or equal to 1.5 V or 3 mA. Note: This parameter was added for firmware version 3.001.	Default: 0 = "Disabled" Options: 0 = "Disabled" 4 = "Set Input Hi" 1 = "Fault" 5 = "Goto Preset1" 2 = "Hold Input" 6 = "Hold OutFreq" 3 = "Set Input Lo"																				
1096	<b>AddSub 1 Input</b> Input value to be added to and/or subtracted from as need with the Add and Subtract function. This input will be added with <a href="#">Par 1097</a> [AddSub 1 Add]. The result will be subtracted from by the value in <a href="#">Par 1098</a> [AddSub 1 Subtrct]. The result of the operation is loaded to <a href="#">Par 1099</a> [AddSub 1 Result].  Equation: Par (1096 + Par 1097) - Par 1098 = Par 1099  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	
1097	<b>AddSub 1 Add</b> This value is added to the value of <a href="#">Par 1096</a> [AddSub 1 Input]. The result will be subtracted from by <a href="#">Par 1098</a> and loaded into <a href="#">Par 1099</a> . See <a href="#">Par 1096</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	
1098	<b>AddSub 1 Subtrct</b> This value is subtracted from the result of <a href="#">Par 1096</a> + <a href="#">Par 1097</a> . The result will be loaded into <a href="#">Par 1099</a> . See <a href="#">Par 1096</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real																	

No.	Name Description	Values	Linkable	Read-Write	Data Type
<b>1099</b>	<b>AddSub 1 Result</b> This is the result output from the Add and Subtract function. See <a href="#">Par 1096</a> .  Equation: $\text{Par } 1099 = (\text{Par } 1096 + \text{Par } 1097) - \text{Par } 1098$  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000		RO	Real
<b>1100</b>	<b>AddSub 2 Input</b> Input value to be added to and/or subtracted from as need with the Add and Subtract function. This input will be added with <a href="#">Par 1101</a> [AddSub 2 Add]. The result will be subtracted from by the value in <a href="#">Par 1102</a> [AddSub 2 Subtrct]. The result of the operation is loaded to <a href="#">Par 1103</a> [AddSub 2 Result].  Equation: $\text{Par } (1100 + \text{Par } 1101) - \text{Par } 1102 = \text{Par } 1103$  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1101</b>	<b>AddSub 2 Add</b> This value is added to the value of <a href="#">Par 1100</a> [AddSub 2 Input]. The result will be subtracted from by <a href="#">Par 1102</a> and loaded into <a href="#">Par 1103</a> . See <a href="#">Par 1100</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1102</b>	<b>AddSub 2 Subtrct</b> This value is subtracted from the result of <a href="#">Par 1100</a> + <a href="#">Par 1101</a> . The result will be loaded into <a href="#">Par 1103</a> . See <a href="#">Par 1100</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1103</b>	<b>AddSub 2 Result</b> This is the result output from the Add and Subtract function. See <a href="#">Par 1100</a> .  Equation: $\text{Par } 1103 = (\text{Par } 1100 + \text{Par } 1101) - \text{Par } 1102$  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000		RO	Real
<b>1104</b>	<b>AddSub 3 Input</b> Input value to be added to and/or subtracted from as need with the Add and Subtract function. This input will be added with <a href="#">Par 1105</a> [AddSub 3 Add]. The result will be subtracted from by the value in <a href="#">Par 1106</a> [AddSub 3 Subtrct]. The result of the operation is loaded to <a href="#">Par 1107</a> [AddSub 3 Result].  Equation: $\text{Par } (1104 + \text{Par } 1105) - \text{Par } 1106 = \text{Par } 1107$  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1105</b>	<b>AddSub 3 Add</b> This value is added to the value of <a href="#">Par 1104</a> [AddSub 3 Input]. The result will be subtracted from by <a href="#">Par 1106</a> and loaded into <a href="#">Par 1107</a> . See <a href="#">Par 1104</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1106</b>	<b>AddSub 3 Subtrct</b> This value is subtracted from the result of <a href="#">Par 1104</a> + <a href="#">Par 1105</a> . The result will be loaded into <a href="#">Par 1107</a> . See <a href="#">Par 1104</a> . Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000	Y	RW	Real
<b>1107</b>	<b>AddSub 3 Result</b> This is the result output from the Add and Subtract function. See <a href="#">Par 1104</a> .  Equation: $\text{Par } 1107 = (\text{Par } 1104 + \text{Par } 1105) - \text{Par } 1106$  Note: This parameter was added for firmware version 3.001.	Default: 1.0000 Min/Max: -/+2200000000.0000		RO	Real
<b>1108</b>	<b>DelTmr1 TrigData</b> Link a word to this parameter that will control a user-defined on or off delay timer. The bit within the selected word that will control the delay timer is set by <a href="#">Par 1109</a> [DelTmr1 Trig Bit]. The user-defined on/off delay timer is enabled by setting bit 6 "Delay Timer" of <a href="#">Par 1000</a> [UserFunct Enable].   Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: 32 bits of data	Y	RW	32-bit Boolean
<b>1109</b>	<b>DelTmr1 Trig Bit</b> Selects the bit, from the word linked to <a href="#">Par 1108</a> [DelTmr1 TrigData], that will change the status of the user-defined delay timer to on or off. When <a href="#">Par 1109</a> [DelTmr1 Trig Bit] is a positive number, the delay timer is an "on" timer. When <a href="#">Par 1109</a> is a negative number, the delay timer is an "off" timer. Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: -/+32		RW	16-bit Integer

No.	Name Description	Values	Linkable	Read-Write	Data Type																																																			
1110	<b>DelayTimer1PrSet</b> The time that the value in <a href="#">Par 1111</a> [DelayTimer1Accum] must reach before bit 2 “Timer Done” in <a href="#">Par 1112</a> [DelayTimer1Stats] is set. Note: This parameter was added for firmware version 3.001.	Units: s Default: 0 Min/Max: 0/600.00	Y	RW	16-bit Integer																																																			
1111	<b>DelayTimer1Accum</b> The amount of time that has elapsed since the timer was enabled ( <a href="#">Par 1112</a> [DelayTimer1Stats], bit 2 set). Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: 0/600.00 Units: s		RO	16-bit Integer																																																			
1112	<b>DelayTimer1Stats</b> Displays the status of the user-defined on or off delay timer. Bit 0 “Timer Enable” when this bit is set, the timer is enabled. Bit 1 “Timer Timing” when this bit is set, the timer is running. Bit 2 “Timer Done” when this bit is set, the timer is done. Note: This parameter was added for firmware version 3.001.	<table><tr><td>Options</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Timer Done</td><td>Timer Timing</td><td>Timer Enable</td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>				Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Timer Done	Timer Timing	Timer Enable	Default	x	x	x	x	x	x	x	x	x	x	x	x	x	0	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

1120	<b>Home Accel Time</b> Acceleration rate when Homing. Note: This parameter was added for firmware version 3.001.	Default: 10.00 Min/Max: 0.01/6553.50 Units: s	Y	RW	Real																																																			
1121	<b>Home Decel Time</b> Deceleration rate when Homing. Note: This parameter was added for firmware version 3.001.	Default: 10.00 Min/Max: 0.01/6553.50 Units: s	Y	RW	Real																																																			
1122	<b>Home Speed</b> Speed reference used when Homing. Notes: This parameter was added for firmware version 3.001. The default value was changed from “0.000” to “0.005” for firmware version 4.001.	Default: 0.005 Min/Max: -/+ 8.000 Units: rpm	Y	RW	Real																																																			

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																			
1123 <div>A</div>	<b>Home Position</b> User-defined Home position. After the Homing function is completed, the following parameters are updated with the value of Par 1123: <a href="#">Par 744</a> [PositRef EGR Out], <a href="#">Par 747</a> [Position Cmmnd], <a href="#">Par 763</a> [Position Actual] and <a href="#">Par 765</a> [Posit Actl Load]. Note: This parameter was added for firmware version 3.001. This parameter was activated for firmware version 4.001.	Default: 0 Min/Max: -/+ 2147483648		Y	RW	32-bit Integer																																																			
1124 <div><div>C</div><div>A</div></div>	<b>Home Actual Pos</b> Actual home position after the Homing function is complete. The value in this parameter displays the raw position feedback data at home position. Note: This parameter was added for firmware version 4.001.	Default: 0 Min/Max: -/+ 2147483648			RO	32-bit Integer																																																			
1125 <div>A</div>	<b>DC Brake Level</b> Defines the DC brake current level injected into the motor when “DC Brake” is selected as a stop mode. This also sets the braking current level when “Fast Stop” is selected. The DC braking voltage used in this function is created by a PWM algorithm and may not generate the smooth holding force needed for some applications. Refer to the PowerFlex 700S with Phase II Control Reference Manual, publication <a href="#">PFLX-RM003</a> . Notes: This parameter was added for firmware version 3.001, but is not functional (for future use). The maximum value was changed from 1170.0 to 3000.0 for firmware version 4.002.	Default: 0.0 Min/Max: 0.0/3000.0 Units: V		Y	RW	Real																																																			
<div><div><div></div></div><div><b>ATTENTION:</b> If a hazard of injury due to movement of equipment or material exists, an auxiliary mechanical braking device must be used. This feature should not be used with synchronous or permanent magnet motors. Motors may be demagnetized during braking.</div></div>																																																									
1126 <div>A</div>	<b>DC Brake Time</b> Sets the amount of time DC brake current is “injected” into the motor. Note: This parameter was added for firmware version 3.001, but is not functional (for future use).	Default: 0.0 Min/Max: 0.0/655.0 Units: s		Y	RW	Real																																																			
1130	<b>PPMP Pos Command</b> Sets the position reference for the Motion Planner. The units are counts. Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: -/+ 2147483648		Y	RW	32-bit Integer																																																			
1131	<b>PPMP Pos Mul</b> Part of the input scale block. Set this value as the multiplier to the value of <a href="#">Par 1130</a> [PPMP Pos Command]. Also see <a href="#">Par 1132</a> [PPMP Pos Div]. The scale block is enabled by setting bit 4 of <a href="#">Par 1134</a> [PPMP Control]. The the intermediate product must be < 31 bits. Note: This parameter was added for firmware version 3.001.	Default: 1 Min/Max: 1/2000000		Y	RW	32-bit Integer																																																			
1132	<b>PPMP Pos Div</b> Part of input scale block. Set this value as the divisor of the product of <a href="#">Par 1130</a> [PPMP Pos Command] and <a href="#">Par 1131</a> [PPMP Pos Mul]. Integer math applies. The scale block is enabled by setting bit 4 of <a href="#">Par 1134</a> [PPMP Control]. Note: This parameter was added for firmware version 3.001.	Default: 1 Min/Max: 1/2000000		Y	RW	32-bit Integer																																																			
1133	<b>PPMP Scaled Cmd</b> Indicates the result of integer scaling of the position reference for the Motion planner or the Position loop. The units are counts. Note: This parameter was added for firmware version 3.001.	Default: 0 Min/Max: -/+ 2147483648			RO	32-bit Integer																																																			
1134	<b>PPMP Control</b> Establishes the operating condition for the Motion Planner. The operating mode(s) is selected if the corresponding bit is set. Bit 0 “Absolute” Absolute mode. When using the Homing function while in Absolute mode, the value in Par 758 [Pt-Pt Posit Ref] must be set relative to the value in <a href="#">Par 763</a> [Position Actual] after homing is complete. For example: When homing is complete Par 763 [Position Actual] = 1000 counts. If you want to move to an absolute position of 2000 counts relative to the home switch, you must enter a value of 3000 counts into <a href="#">Par 758</a> [Pt-Pt Posit Ref] (i.e., 1000 + 2000 = 3000). If you want to move back to the home switch, using the same value in Par 763 [Position Actual] after homing (1000), you must enter a value of 1000 into Par 758 [Pt-Pt Position Ref] (i.e., 0 + 1000 = 1000). <ul style="list-style-type: none"><li>• Bit 1 “Incremental” Incremental mode</li><li>• Bit 2 “Start” Start</li><li>• Bit 4 “Scaling En” Scaling enabled</li><li>• Bit 5 “Over Ride En” Override enabled</li><li>• Bit 6 “S Curve En” S Curve Enabled</li><li>• Bit 7 “Cond Hold” Conditional Hold</li><li>• Bit 8 “Pause” Pause</li><li>• Bit 9 “Re-Synch” Re-Synch</li></ul> Note: This parameter was added for firmware version 3.001.																																																								
<table><tr><td>Options</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Reserved</td><td>Re-Synch</td><td>Pause</td><td>Cond Hold</td><td>S Curve En</td><td>Over Ride En</td><td>Scaling En</td><td>Reserved</td><td>Start</td><td>Incremental</td><td>Absolute</td></tr><tr><td>Default</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>x</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>x</td><td>0</td><td>0</td><td>0</td></tr><tr><td>Bit</td><td>15</td><td>14</td><td>13</td><td>12</td><td>11</td><td>10</td><td>9</td><td>8</td><td>7</td><td>6</td><td>5</td><td>4</td><td>3</td><td>2</td><td>1</td><td>0</td></tr></table> <div>0 = False 1 = True</div>							Options	Reserved	Reserved	Reserved	Reserved	Reserved	Reserved	Re-Synch	Pause	Cond Hold	S Curve En	Over Ride En	Scaling En	Reserved	Start	Incremental	Absolute	Default	x	x	x	x	x	x	0	0	0	0	0	0	x	0	0	0	Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0																																							
1136	<b>PPMP Rev Spd Lim</b> Sets the maximum reverse speed reference limit. Notes: This parameter was added for firmware version 3.001. Changed the default value and made the parameter linkable for firmware version 4.001.	Default: -0.5 Min/Max: -/+ 8.0 Units: rpm	Y	RW	Real																																																		
1137	<b>PPMP Fwd Spd Lim</b> Sets the maximum forward speed reference limit. Note: This parameter was added for firmware version 3.001. Changed the default value and made the parameter linkable for firmware version 4.001.	Default: +0.5 Min/Max: -/+ 8.0 Units: rpm	Y	RW	Real																																																		
1138	<b>PPMP Over Ride</b> Multiplies both forward (Par 1136 [PPMP Rev Spd Lim]) and reverse (Par 1137 [PPMP Fwd Spd Lim]) speed limits by this value. Note: This parameter was added for firmware version 3.001. Changed the default value, minimum value and made the parameter linkable for firmware version 4.001.	Default: 1.0 Min/Max: 0.0/1.5	Y	RW	Real																																																		
1139	<b>PPMP Accel Time</b> Sets the ramp time for acceleration (time to go from zero to full speed). Note: This parameter was added for firmware version 3.001.	Default: 10.00 Min/Max: 0.01/6553.50 Units: s	Y	RW	Real																																																		
1140	<b>PPMP Decel Time</b> Sets the ramp time for deceleration (time to go from full speed to zero speed). Note: This parameter was added for firmware version 3.001.	Default: 10.00 Min/Max: 0.01/6553.50 Units: s	Y	RW	Real																																																		
1141	<b>PPMP SCurve Time</b> Sets the amount of time that is applied to the S Curve. Half of the time specified is added at the beginning and half end of the acceleration and deceleration ramp. Note: This parameter was added for firmware version 3.001.	Default: 0.05 Min/Max: 0.00/4.00 Units: s	Y	RW	Real																																																		
1142	<b>PPMP Spd Output</b> Provides a speed reference output from the Motion Planner. Typically this parameter would be used by the drives speed loop. A link could be made from a velocity reference input to this parameter. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+ 8.0 Units: rpm		RO	Real																																																		
1143	<b>PPMP Pos Output</b> Provides a position reference output from the Motion Planner. This output is scaled in counts. Typically this parameter would be used by the drive's Position Loop. A link could be made from auxiliary position input to this parameter. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+ 2147483648.0		RO	Real																																																		
1144	<b>PPMP Pos To Go</b> Provides indication of feedback counts remaining in the move. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+ 2147483648.0		RO	Real																																																		
1145	<b>PPMP TP Select</b> Motion Planner test point selection. Notes: This parameter was added for firmware version 3.001. Selection 9 was changed to "Reserved" for firmware version 4.001.	Default: 0 = "Zero" Options: <table><tr><td>0 = "Zero"</td><td>17 = "MP Mtn Calc"</td></tr><tr><td>1 = "MP FrctAccml"</td><td>18 = "MP AnlgPulse"</td></tr><tr><td>2 = "MP WholeAccm"</td><td>19 = "MP Rate In"</td></tr><tr><td>3 = "MP EPR"</td><td>20 = "MP Rate Out"</td></tr><tr><td>4 = "MP NBase"</td><td>21 = "MP Gain"</td></tr><tr><td>5 = "MP Once Flag"</td><td>22 = "MP Kx"</td></tr><tr><td>6 = "MP Pos Fdbk"</td><td>23 = "MP FrctAccmR"</td></tr><tr><td>7 = "MP Pos Fdbk1"</td><td>24 = "MP AccelRate"</td></tr><tr><td>8 = "MP ErrorSum"</td><td>25 = "MP DecelRate"</td></tr><tr><td>9 = "Reserved"</td><td>26 = "MP Cal"</td></tr><tr><td>10 = "MP IntegHold"</td><td>27 = "SC Sum"</td></tr><tr><td>11 = "MP Pos Exact"</td><td>28 = "SC Index"</td></tr><tr><td>12 = "MP Pos Diff"</td><td>29 = "SC ArraySize"</td></tr><tr><td>13 = "MP One Shot"</td><td>30 = "SC Once"</td></tr><tr><td>14 = "MP Run Delay"</td><td>31 = "SC Enable"</td></tr><tr><td>15 = "MP ResyncOne"</td><td>32 = "SC lpos"</td></tr><tr><td>16 = "MP Task Time"</td><td></td></tr></table>	0 = "Zero"	17 = "MP Mtn Calc"	1 = "MP FrctAccml"	18 = "MP AnlgPulse"	2 = "MP WholeAccm"	19 = "MP Rate In"	3 = "MP EPR"	20 = "MP Rate Out"	4 = "MP NBase"	21 = "MP Gain"	5 = "MP Once Flag"	22 = "MP Kx"	6 = "MP Pos Fdbk"	23 = "MP FrctAccmR"	7 = "MP Pos Fdbk1"	24 = "MP AccelRate"	8 = "MP ErrorSum"	25 = "MP DecelRate"	9 = "Reserved"	26 = "MP Cal"	10 = "MP IntegHold"	27 = "SC Sum"	11 = "MP Pos Exact"	28 = "SC Index"	12 = "MP Pos Diff"	29 = "SC ArraySize"	13 = "MP One Shot"	30 = "SC Once"	14 = "MP Run Delay"	31 = "SC Enable"	15 = "MP ResyncOne"	32 = "SC lpos"	16 = "MP Task Time"

1146	<b>PPMP TP DataDInt</b> Test point integer data. This data is meaningful only if the selection at Par 1145 [PPMP TP Select] is integer data. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+ 2147483648.0		RO	32-bit Integer																																																		
1147	<b>PPMP TP DataReal</b> Test point real data. This data is meaningful only if the selection at Par 1145 [PPMP TP Select] is not integer data. Note: This parameter was added for firmware version 3.001.	Default: 0.0 Min/Max: -/+2200000000.0		RO	Real																																																		

No.	Name Description	Values		Linkable	Read-Write	Data Type																																																						
1150	<b>DInt2Real2 In</b> Input value for a second DInt to Real value conversion. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	0 -/+2147483648.0	Y	RW	32-bit Integer																																																						
1151	<b>DInt2Real2 Scale</b> Input value to scale the second conversion from DInt to Real. This is a multiplication to the input value after conversion to a Real value. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	0.0 -/+2200000000.0	Y	RW	Real																																																						
1152	<b>DInt2Real2Result</b> This is the resultant output of the second conversion form a DInt value to a Real value after scaling. Note: This parameter was added for firmware version 3.001.	Default: Min/Max:	0.0 -/+2200000000.0		RO	Real																																																						
1155	<b>Heidn VM Pos Ref</b> Virtual Master position reference for the Heidenhain option card. This value is used by the Virtual Master function as a position reference. This parameter can be linked to a position reference source, such as <a href="#">Par 1160</a> [VirtEncPositFast]. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0.0 -/+2147483648.0	Y	RW	32-bit Integer																																																						
1156	 <b>Heidn VM Enc PPR</b> Virtual Master Encoder Pulse per Revolution (PPR). This value defines the encoder PPR for the Virtual Master function. The Heidenhain option card produces the encoder pulse according to this PPR value, which is limited to 1024 or 2048 encoder lines. Note: This parameter was added for firmware version 4.001.	Default: Min/Max: Units:	1024 1024 and 2048 only PPR		RW	32-bit Integer																																																						
1160	<b>VirtEncPositFast</b> Virtual Encoder position output in Task 1. One of three outputs from the Virtual Encoder function. This value is the encoder position reference output for Task1 (fast rate). <a href="#">Par 62</a> [Virt Encdr Posit] and <a href="#">Par 63</a> [Virt Encdr Dlyed] are the encoder position output in Task 2. For the Virtual Master Encoder function, you must use Par 1160 [VirEncPosiFast] as the position reference updated in Task 1. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0.0 -/+2147483648.0		RO	32-bit Integer																																																						
1161	<b>EGR Config</b> Configuration for the Electrical Gear Ratio (EGR) user function. Setting bit 7 “EGR” of <a href="#">Par 1000</a> [UserFunction Enable] enables the EGR user function. The combination of bit 0 “Output Sel 0” and bit 1 “Output Sel 1” determines the output of the EGR user function as follows:																																																											
	<table><tr><th>Bit 1</th><th>Bit 0</th><th>Description</th></tr><tr><td>0</td><td>0</td><td><a href="#">Par 1165</a> [EGR Pos Output] is set to zero</td></tr><tr><td>0</td><td>1</td><td><a href="#">Par 1165</a> [EGR Pos Output] is active</td></tr><tr><td>1</td><td>0</td><td><a href="#">Par 1165</a> [EGR Pos Output] is set to the value of <a href="#">Par 1164</a> [EGR Pos Input]</td></tr><tr><td>1</td><td>1</td><td><a href="#">Par 1165</a> [EGR Pos Output] is set to the value of <a href="#">Par 1166</a> [EGR Pos preset]</td></tr></table>						Bit 1	Bit 0	Description	0	0	<a href="#">Par 1165</a> [EGR Pos Output] is set to zero	0	1	<a href="#">Par 1165</a> [EGR Pos Output] is active	1	0	<a href="#">Par 1165</a> [EGR Pos Output] is set to the value of <a href="#">Par 1164</a> [EGR Pos Input]	1	1	<a href="#">Par 1165</a> [EGR Pos Output] is set to the value of <a href="#">Par 1166</a> [EGR Pos preset]																																							
Bit 1	Bit 0	Description																																																										
0	0	<a href="#">Par 1165</a> [EGR Pos Output] is set to zero

Bit	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0																																												
1162	<b>EGR Mul</b> Multiplier (numerator) of the EGR user function position input. ( <a href="#">Par 1164</a> [EGR Pos Input] x <a href="#">Par 1162</a> [EGR Mul]) / <a href="#">Par 1163</a> [EGR Div] = <a href="#">Par 1165</a> [EGR Pos Output] Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	1.0 -/+2000000.0	Y	RW	32-bit Integer																																																						
1163	<b>EGR Div</b> Divisor (denominator) of the EGR user function position input. ( <a href="#">Par 1164</a> [EGR Pos Input] x <a href="#">Par 1162</a> [EGR Mul]) / <a href="#">Par 1163</a> [EGR Div] = <a href="#">Par 1165</a> [EGR Pos Output] Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	1.0 +1.0/+2000000.0	Y	RW	32-bit Integer																																																						
1164	<b>EGR Pos Input</b> Position reference input to the Electrical Gear Ratio user function. This parameter can be linked to a position reference source, such as <a href="#">Par 1160</a> [VirtEncPositFast]. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0.0 -/+2147483648.0	Y	RW	32-bit Integer																																																						
1165	<b>EGR Pos Output</b> Position reference output from the Electrical Gear Ratio user function. This parameter can be linked to a position reference sink, such as <a href="#">Par 1155</a> [Heidn VM Pos Ref]. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0.0 -/+2147483648.0		RO	32-bit Integer																																																						
1166	<b>EGR Pos Preset</b> A preset value for the Electrical Gear Ratio user function. This value is set to the value in <a href="#">Par 1165</a> [EGR Pos Output] when bits 0 “Output Sel 0” and 1 “Output Sel 1” of <a href="#">Par 1161</a> [EGR Config] are set. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0.0 -/+2147483648.0	Y	RW	32-bit Integer																																																						
1170	<b>MC Generic 1</b> For Future Use. Note: This parameter was added for firmware version 4.001.	Default: Min/Max:	0 +/-32767		RW	16-bit Integer																																																						

No.	Name Description	Values	Linkable	Read-Write	Data Type

## **Notes:**

## Troubleshooting

This chapter provides information to guide you in troubleshooting the PowerFlex 700S drive. A list and description of drive faults (with possible solutions, when applicable) and alarms is included.

Topic	Page
Status Indicators	Below
HIM Indication of a Fault	<a href="#">144</a>
Manually Clearing Faults	<a href="#">144</a>
Fault and Alarm Types	<a href="#">144</a>
Fault/Alarm Descriptions	<a href="#">145</a>

### Status Indicators

The condition or state of your drive and DriveLogix controller (if installed) is constantly monitored. Any changes will be indicated through the front panel LEDs and/or the HIM (if present). See Drive Status Indicators on page [140](#) for more information. The DriveLogix option also provides a RUN LED and the controller LEDs that indicate the state of the controller. See DriveLogix5730 Controller Status Indicators on page [141](#) for more information.

## Drive Status Indicators

**Table 3 - Drive Status Indicator Descriptions**

		#	Name	Color	State	Description
DRIVE	Power Structure	1	PWR (Power)	Green	Steady	Illuminates when power is applied to the drive.
		2	STS (Status)	Green	Flashing	Drive ready, but not running & no faults are present.
					Steady	Drive running, no faults are present.
				Yellow	Flashing	When running, a type 2 (non-configurable) alarm condition exists, drive continues to run. When stopped, a start inhibit exists and the drive cannot be started.
					Steady	A type 1 (user configurable) alarm condition exists, but drive continues to run.
				Red	Flashing	A fault has occurred.
					Steady	A non-resettable fault has occurred.
				Red / Yellow	Flashing Alternately	The drive is in flash recovery mode. The only operation permitted is flash upgrade.
	Control Assembly	3	PORT	Refer to the <i>Communication Adapter User Manual</i>		Status of DPI port internal communications (if present).
			MOD			Status of communications module (when installed).
			NET A			Status of network (if connected).
			NET B			Status of secondary network (if connected).
	Control	(1)	SYNCHLINK	Green	Steady	The module is configured as the time keeper. or The module is configured as a follower and synchronization is complete.
					Flashing	The follower(s) are not synchronized with the time keeper.
				Red	Flashing	The module is configured as a time master on SynchLink and has received time information from another time master on SynchLink.
			ENABLE	Green	On	The drive's enable input is high.
				Green	Off	The drive's enable input is low.

(1) SynchLink LEDs are located on the SynchLink daughtercard on the main circuit board in the control cassette. Refer to the *SynchLink System Design Guide*, publication 1756-TD008, for more information.

## DriveLogix5730 Controller Status Indicators

The status indicators (LEDs) for the DriveLogix controller are only operational when the drive is energized. The LEDs are only visible when the drive door is open or when viewed from the HIM or from an application program (e.g., DriveExplorer™) in parameter 554 [LED Status]. This feature is only available with DriveLogix version 15.03 or later.

**ATTENTION:** The RUN LED and the controller LEDs are only operational when the drive is energized, and are visible with the drive door open. Servicing energized equipment can be hazardous. Severe injury or death can result from electrical shock, burn or unintended actuation of controlled equipment. Follow Safety related practices of NFPA 70E, *ELECTRICAL SAFETY FOR EMPLOYEE WORKPLACES*. DO NOT work alone on energized equipment!

**Table 4 - DriveLogix5730 Controller Status Indicator Descriptions**

LED	Color/Condition:	Description:
RUN	off	The controller is in Program or Test mode.
	solid green	The controller is in Run mode.
I/O	off	Either: There are <i>no</i> devices in the I/O configuration of the controller. The controller does <i>not</i> contain a project (controller memory is empty).
	solid green	The controller is communicating with all the devices in its I/O configuration.
	flashing green	One or more devices in the I/O configuration of the controller are <i>not</i> responding.
	flashing red	The controller is not communicating to any devices. The controller is faulted.
FORCE	off	No tags contain I/O force values. I/O forces are inactive (disabled).
	solid amber	I/O forces are active (enabled). I/O force values may or may not exist.
	flashing amber	One or more input or output address have been forced to an On or Off state, but the forces have not been enabled.
COM	off	No RS-232 activity.
	flashing green	RS-232 activity.
BAT	off	The battery supports memory.
	solid red	Either the battery is: <ul style="list-style-type: none"> <li>• Not installed.</li> <li>• 95% discharged and should be replaced.</li> </ul>
OK	off	No power is applied.
	flashing red	If the controller is:
		Then:
		a new controller      the controller requires a firmware update
	not a new controller	A major fault occurred. To clear the fault, either: Turn the key switch from PROG to RUN to PROG Go online with RSLogix 5000 software
OK	solid red	The controller detected a non-recoverable fault, so it cleared the project from memory. To recover: <ul style="list-style-type: none"> <li>• Cycle power to the chassis.</li> <li>• Download the project.</li> <li>• Change to Run mode.</li> <li>• If the OK LED remains solid red, contact your Rockwell Automation representative or local distributor.</li> </ul>
	solid green	Controller is OK.
	flashing green	The controller is storing or loading a project to or from nonvolatile memory.

## Precharge Board Status Indicators

The Precharge Board indicators (LEDs) are found on Frame 5 & 6 drives only and are located above the “Line Type” Phase selection jumper. Refer to the PowerFlex 700S Adjustable Frequency Drive - Phase II Control, Frames 1...6 Installation Instructions, publication [20D-IN024](#), for the location of the Phase selection jumper.

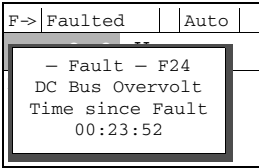

Name	Color	State	Description
Power	Green	Steady	Indicates when precharge board power supply is operational
Alarm	Yellow	Flashing [1] [2] [3] [4] [5] [6] [7]	Number in “[ ]” indicates flashes and associated alarm <sup>(1)</sup> : Low line voltage (<90%). Very low line voltage (<50%). Low phase (one phase <80% of line voltage). Frequency out of range or asymmetry (line sync failed). Low DC bus voltage (triggers ride-through operation). Input frequency momentarily out of range (40-65 Hz). DC bus short circuit detection active.
Fault	Red	Flashing [2] [4]	Number in “[ ]” indicates flashes and associated fault <sup>(2)</sup> : DC bus short (Udc <2% after 20 ms). Line sync failed or low line (Uac <50% Unom).

(1) An alarm condition automatically resets when the condition no longer exists

(2) A fault indicates a malfunction that must be corrected and can only be reset after cycling power.

## HIM Indication of a Fault

The HIM also provides visual notification of a fault.

Condition	Display
<b>Drive is indicating a fault.</b> The LCD HIM immediately reports the fault condition by displaying the following: <ul style="list-style-type: none"> <li>• “Faulted” appears in the status line</li> <li>• Fault number</li> <li>• Fault name</li> <li>• Time that has passed since the fault occurred</li> </ul> Press Esc to regain control of the HIM	

## Manually Clearing Faults

Follow the steps to manually clear a fault:

1. Press  (Esc) on the HIM to acknowledge the fault.  
The fault information will be removed so that you can use the HIM.
2. Address the condition that caused the fault.  
The cause must be corrected before the fault can be cleared.
3. After corrective action has been taken, clear the fault using one of the methods:
  - Press  (Stop) on the HIM
  - Cycle drive power
  - Select “Clear Faults” from the Diagnostics > Faults menu on the HIM

## Fault and Alarm Types

A fault is a condition that stops the drive. An alarm is a condition that, if left untreated, may stop the drive. There are three configuration types for indicating a fault and/or alarm.

**Table 5 - Fault Type Descriptions**

Type	Fault Description	
1	Non-Configurable Fault	The cause of the fault must be corrected before the fault can be cleared.
2	User Configurable	Programming and commissioning personnel can configure the drive's response to the exception events. Response include: <ul style="list-style-type: none"> <li>• Ignore</li> <li>• Alarm</li> <li>• Fault Coast Stop</li> <li>• Fault Ramp Stop</li> <li>• Fault Current Limit Stop</li> </ul>
3	Non-Configurable Alarm	Can only be configured as a alarm.

## Fault/Alarm Descriptions

Table 6 - Fault/Alarm Descriptions, Actions and Configuration Parameters

No.	Name	Type <sup>(1)</sup>	Description	Action
1	Abs Ovespd Det	1	The motor speed has exceeded the limits set in <a href="#">Par 75</a> [Rev Speed Limit], <a href="#">Par 76</a> [Fwd Speed Limit] and <a href="#">Par 335</a> [Abs OverSpd Lim].	<ul style="list-style-type: none"> <li>Check to see if the encoder feedback polarity is correct.</li> <li>Check to see if the drive is in torque mode (selected in <a href="#">Par 110</a> [Speed/TorqueMode] value 2 "Torque Ref"). If the drive is in torque mode, verify that there is a load present.</li> <li>Verify the min/max settings in <a href="#">Par 75</a> [Rev Speed Lim] and <a href="#">Par 76</a> [Fwd Speed Lim].</li> <li>Check to see if the load is overhauling. If it is overhauling, turn the bus regulator off using <a href="#">Par 414</a> [Brake/Bus Cnfg] bit 2 "BusRef High".</li> </ul>
2	Vref Decel Fail	1	The value of <a href="#">Par 301</a> [Motor Spd Ref] has failed to decrease during a ramp to zero speed stop.	This could possibly be due to a speed trim from <a href="#">Par 21</a> [Speed Trim 1], <a href="#">Par 22</a> [Speed Trim 2] or <a href="#">Par 23</a> [Speed Trim 3].
3	Encoder 0 Loss	2	One of the following has occurred on encoder 0: <ul style="list-style-type: none"> <li>missing encoder (broken wire)</li> <li>quadrature error</li> <li>phase loss</li> </ul>	Reconnect or replace the encoder. Configured with <a href="#">Par 365</a> [Fdbk LsCnfg Pri], <a href="#">Par 366</a> [Fdbk LsCnfg Alt], and <a href="#">Par 367</a> [Fdbk LsCnfgPosit].
4	Encoder 1 Loss	2	One of the following has occurred on encoder 1: <ul style="list-style-type: none"> <li>missing encoder (broken wire)</li> <li>quadrature error</li> <li>phase loss</li> </ul>	Reconnect or replace the encoder. Configured with <a href="#">Par 365</a> [Fdbk LsCnfg Pri], <a href="#">Par 366</a> [Fdbk LsCnfg Alt], and <a href="#">Par 367</a> [Fdbk LsCnfgPosit].
5	Opt Port 0 Loss	2	A fault on port 0 of the Hi-Resolution Encoder feedback option card, MDI option card, Heidenhain option card, or Resolver feedback option card has occurred. <ul style="list-style-type: none"> <li><a href="#">Par 260</a> [Stegmann0 Status] displays the fault status for port 0 of the Hi-Resolution Encoder feedback option card.</li> <li><a href="#">Par 264</a> [Heidenhain0 Stat] displays the fault status for port 0 of the Heidenhain feedback option card.</li> <li><a href="#">Par 269</a> [Resolver0 Status] displays the fault status for port 0 of the Resolver feedback option card.</li> </ul>	<ul style="list-style-type: none"> <li>Reconnect or replace the encoder</li> <li>Reconnect the option feedback card</li> </ul> Configured with <a href="#">Par 365</a> [Fdbk LsCnfg Pri], <a href="#">Par 366</a> [Fdbk LsCnfg Alt], and <a href="#">Par 367</a> [Fdbk LsCnfgPosit].
6	Opt Port 1 Loss	2	The Linear sensor portion of the MDI feedback option card has detected a fault condition. <ul style="list-style-type: none"> <li><a href="#">Par 286</a> [Linear1 Status] displays the fault status for linear portion of the MDI feedback option card.</li> </ul>	<ul style="list-style-type: none"> <li>Reconnect or replace the encoder.</li> <li>Reconnect the feedback option card.</li> </ul> Configured with <a href="#">Par 365</a> [Fdbk LsCnfg Pri], <a href="#">Par 366</a> [Fdbk LsCnfg Alt], and <a href="#">Par 367</a> [Fdbk LsCnfgPosit].
7	Params Defaulted	1	All parameters are reset to default by user.	(Informational Only)
8	SLink HW Fail	1	A fault has occurred while loading the SynchLink firmware into FPGA on the Main Control board at power up.	Replace the Main Control board.
9	SLink Comm Fail	2	A SynchLink communication fault has occurred. <ul style="list-style-type: none"> <li><a href="#">Par 902</a> [SL Error Status] displays SynchLink errors.</li> </ul>	Verify the SynchLink configuration in: <ul style="list-style-type: none"> <li><a href="#">Par 904</a> [SL Node Cnfg]</li> <li><a href="#">Par 905</a> [SL Rx CommFormat], and</li> <li><a href="#">Par 910</a> [SL Tx CommFormat]</li> </ul> Reconnect SynchLink communication fibers. Configured with <a href="#">Par 384</a> [SL CommLoss Cnfg].
10	Drive Power Loss	1	One of the following has occurred: <ul style="list-style-type: none"> <li>DC Bus voltage has fallen below the minimum value.</li> <li><a href="#">Par 306</a> [DC Bus Voltage] displays bus voltage.</li> <li><a href="#">Par 330</a> [Fault TP Data] displays the minimum value when <a href="#">Par 329</a> [Fault TP I] is set to five.</li> <li>The drive must first complete precharge before this check is made.</li> </ul>	Verify AC line power.
11	Motor OLoad Trip	2	A motor overload trip has occurred. <a href="#">Par 308</a> [Output Current] is squared, scaled and integrated over time. When this integrated value exceeds 1.0, this exception event occurs.  The integrator's output can be viewed in <a href="#">Par 330</a> [Fault TP Data] when <a href="#">Par 329</a> [Fault TP I] is set to 13 "Mtr OL Output". The overload integration rate is affected by <a href="#">Par 336</a> [Motor OL Factor], <a href="#">Par 337</a> [Mtr I2T Curr Min], <a href="#">Par 338</a> [Mtr I2T Spd Min] and <a href="#">Par 339</a> [Mtr I2T Calibrat].	<ul style="list-style-type: none"> <li>Reduce mechanical load</li> <li>Enter correct motor nameplate full load amps <a href="#">Par 2</a> [Motor NP FLA]</li> </ul> Configured with <a href="#">Par 371</a> [Mtr OL Trip Cnfg]

No.	Name	Type <sup>(1)</sup>	Description	Action
12	Motor OLoad Pend	2	A motor overload is pending. <a href="#">Par 308</a> [Output Current] is squared, scaled and integrated over time. When this integrated value exceeds 0.5, this exception event occurs.  The integrator's output can be viewed in <a href="#">Par 330</a> [Fault TP Data] when <a href="#">Par 329</a> [Fault TP I] is set to 13 "Mtr OL Outpt". The overload integration rate is affected by <a href="#">Par 336</a> [Motor OL Factor], <a href="#">Par 337</a> [Mtr I2T Curr Min], <a href="#">Par 338</a> [Mtr I2T Spd Min] and <a href="#">Par 339</a> [Mtr I2T Calibrat].	<ul style="list-style-type: none"> <li>Reduce the mechanical load.</li> <li>Enter correct motor nameplate full load amps <a href="#">Par 2</a> [Motor NP FLA].</li> </ul> Configured with <a href="#">Par 371</a> [Mtr OL Trip Cnfg].
13	Motor Stalled	2	The motor has stalled. The three conditions listed below have occurred at the same time for the amount of time specified in <a href="#">Par 373</a> [Motor Stall Time]: 1. The drive is not stopped ( <a href="#">Par 150</a> [Logic State Mach] is not equal to zero). 2. The drive is on limit ( <a href="#">Par 304</a> [Limit Status] is not equal to zero). 3. The drive is at zero speed ( <a href="#">Par 155</a> [Logic Status], bit 13 "At Zero Spd" is set).	<ul style="list-style-type: none"> <li>Increase the torque limit.</li> <li>Reduce the mechanical load.</li> </ul> Configured with <a href="#">Par 374</a> [Motor Stall Cnfg].
14	Inv OTemp Pend	2	<a href="#">Par 313</a> [Heatsink Temp] is within 10°C of maximum.  View the maximum heat sink temperature in <a href="#">Par 348</a> [Drive OL TP Data] when <a href="#">Par 347</a> [Drive OL TP I] is set to 30 "fMaxHsDegC".	<ul style="list-style-type: none"> <li>Reduce the mechanical load.</li> <li>Lower the ambient temperature.</li> </ul> Configured with <a href="#">Par 375</a> [Inv OT Pend Cnfg].
15	Inv OTemp Trip	1	<a href="#">Par 313</a> [Heatsink Temp] is above the maximum limit or a temperature sensor has failed (shorted or open). See <a href="#">Par 346</a> [Drive OL Status], bit 0 "NTC Shorted" and bit 1 "NTC Open".  Or, the calculated junction temperature (displayed in <a href="#">Par 345</a> [Drive OL JnctTmp]) of the power semiconductors in the inverter has been exceeded.	<ul style="list-style-type: none"> <li>Reduce the mechanical load.</li> <li>Lower the ambient temperature.</li> </ul>
16	Inv OLoad Pend	2	The drive's operating point is approaching the intermittent current rating limitation. If output current remains at or above present levels, an inverter overload condition will occur.	Reduce the load on the drive. Configured with <a href="#">Par 376</a> [Inv OL Pend Cnfg].
17	Inv OLoad Trip	2	The drive's operating point has exceeded the intermittent current rating and a foldback to the continuous rating in <a href="#">Par 400</a> [Rated Amps] has occurred.	Reduce the mechanical load. Configured with <a href="#">Par 377</a> [Inv OL Trip Cnfg].
18	Ext Fault Input	2	A digital input has detected an external fault.	Enter a value of 3 "Ext Fault" or 38 "ExtFault Inv" in one of the following parameters to configure an input to detect an external fault: <ul style="list-style-type: none"> <li><a href="#">Par 825</a> [Digin 1 Sel]</li> <li><a href="#">Par 826</a> [Digin 2 Sel]</li> <li><a href="#">Par 827</a> [Digin 3 Sel]</li> <li><a href="#">Par 828</a> [Dig In4 Sel]</li> <li><a href="#">Par 829</a> [Dig In5 Sel]</li> <li><a href="#">Par 830</a> [Dig In6 Sel]</li> </ul> Configured with <a href="#">Par 379</a> [Ext Flt/Alm Cnfg].
19	DSP Memory Error	1	Flash memory does not match the SRAM memory.	Cycle the drive power. If the fault remains, replace the Main Control board.
20	DSP Device Error	1	A DSP (Velocity Position Loop) interrupt task has not been completed in the allotted time.	Cycle the drive power. If the fault remains, replace the Main Control board.
22	Over Frequency	1	The Encoderless algorithm failed to converge on the correct speed. Two possible causes include: 1. The Velocity regulator is attempting to run below the motor's slip speed. 2. The Frequency regulator "pulls out" and the commanded motor frequency slows to the maximum frequency limit.	
23	MC Commissn Fail	1	The drive has failed to complete either the Motor Autotuning procedure or the Power Circuits Diagnostics test. <a href="#">Par 463</a> [MC Diag Error 1], <a href="#">Par 464</a> [MC Diag Error 2], and <a href="#">Par 465</a> [MC Diag Error 3] display Motor Autotuning and Power Circuit Diagnostic faults.  <a href="#">Par 465</a> [MC Diag Error 3] - Drive current, inductance, voltage and speed are not within motor nameplate specifications. This fault occurs most frequently on low horsepower motors.	<ul style="list-style-type: none"> <li>Verify that the motor nameplate data is entered correctly into the drive.</li> <li>Verify that the motor is wired for the correction voltage entering into the drive.</li> <li>Verify that the encoder (if used) and velocity feedback is correct.</li> <li>Change the tuning mode in <a href="#">Par 515</a> [FVC Tune Config] to 9 "NoRotate Tune".</li> </ul>
24	DC Bus Overvolt	1	A DC Bus overvoltage has occurred.	<ul style="list-style-type: none"> <li>Verify the AC Line.</li> <li>Verify that either the brake or bus regulator is enabled (<a href="#">Par 414</a> [Brake/Bus Cnfg], bit 0 "Brake Enable" or bit 3 "Bus Reg Enable", respectively).</li> <li>Verify that <a href="#">Par 128</a> [Regen Power Lim] is set properly.</li> <li>If <a href="#">Par 414</a> [Brake/Bus Cnfg] bit 0 "Brake Enable" is set, verify that the braking resistor is properly sized.</li> </ul>
25	Inv Trans Desat	1	The IGBT detects a transistor failure (Desaturation).	

No.	Name	Type <sup>(1)</sup>	Description	Action
26	Ground Fault	1	A current to earth exceeds 35% of the peak drive rating.	Check the motor and external wiring to the drive output terminals for a grounded condition.
27	Inst Overcurrent	1	The instantaneous motor current exceeds 214% of the rating.	<ul style="list-style-type: none"> <li>Reduce the mechanical load.</li> <li>Check the motor and external wiring to the motor.</li> </ul>
28	VPL/MC Comm Fail	1	<p>A communication failure has occurred between the Velocity Position Loop (VPL) processor and the Motor Control (MC) processor on the main control board. Possible cause are:</p> <ul style="list-style-type: none"> <li>The VPL is flashing the MC firmware into the MC processor when HIM indicates "Loading Config".</li> <li>The MC has failed to complete or pass diagnostic tests.</li> <li>The MC has not detected VPL handshake activity for over 32 ms.</li> <li>The VPL has not detected MC handshake activity for over 32 ms. This is indicated when Fault Test Point 15 or 16 equals 1. This test point is viewed in <a href="#">Par 330</a> [Fault TP Data] when <a href="#">Par 329</a> [Fault TP select] is set to value 15 or 16.</li> </ul>	<ul style="list-style-type: none"> <li>Cycle power to the drive.</li> <li>Reflash the firmware.</li> <li>Replace the Main Control board.</li> </ul>
29	PWM Signal Short	1	This fault is detected when ever the actual IGBT gate is different than the commanded IGBT states. This fault is detected by the Motor Control (MC) processor.	
30	MC Firmware	1	<p>One of the following Motor Control (MC) firmware errors has occurred:</p> <ul style="list-style-type: none"> <li>MC Task Over Run</li> <li>Illegal Interrupt</li> <li>Self Diagnostic Fault</li> <li>Data Error</li> </ul>	<ul style="list-style-type: none"> <li>Cycle power to the drive.</li> <li>Reflash the firmware.</li> <li>Replace the Main Control board.</li> </ul>
31	Precharge Error	2	<p>The precharge function has failed to complete within 30 seconds (default) of the precharge request. The precharge time out is configurable in <a href="#">Par 410</a> [PreChrg TimeOut].</p> <p>A precharge request is initiated when the DC Bus voltage is above the Undervoltage Trip level and the precharge input is high (the requirement for the precharge being high can be bypassed by setting <a href="#">Par 411</a> [PreChrg Control], bit 01 "PreChrg Enable" to 0 "Off").</p>	<ul style="list-style-type: none"> <li>Verify the value in <a href="#">Par 410</a> [PreChrg TimeOut].</li> <li>Verify the bit value in <a href="#">Par 411</a> [PreChrg Control] = 1 "Enbl PrChrg".</li> </ul> <p>Configured with <a href="#">Par 381</a> [PreChrg Err Cnfg]</p>
32	PWM Asynch	1	The Motor Control Processor is not synchronized with SynchLink.	
33	+/- 15volt Power	1	The 12V DC control voltage is outside the tolerance range. The positive voltage power must be within the band from +17.00 to +11.61V DC. The negative voltage power must be within the band from -17.00 to -11.61V DC.	Replace switch mode power supply. For smaller frames, replace drive.
35	Parameter Chksum	1	The checksum read from the EEPROM does not match the checksum calculated	<ul style="list-style-type: none"> <li>Cycle power to the drive.</li> <li>Replace the Main Control board.</li> </ul>
38	Brake OL Trip	2	<p>The calculated temperature of the dynamic braking resistor is too high. The temperature is calculated by a thermal model.</p> <p>If the resistor is internal, the model uses the resistor characteristics stored in the power structure EEPROM memory.</p> <p>If the resistor is external, the model uses values of <a href="#">Par 416</a> [Brake PulWatts] and <a href="#">Par 417</a> [Brake Watts].</p>	<p>Verify actual temperature of brake:</p> <ul style="list-style-type: none"> <li>If hot, wait for the brake to cool.</li> <li>If cold, cycle power to the drive. If cold, verify that the values of <a href="#">Par 416</a> [Brake PulWatts] and <a href="#">Par 417</a> [Brake Watts] are correct.</li> </ul> <p>Configured with <a href="#">Par 369</a> [Brake OL Cnfg].</p>
39	PowerEE CRC Fail	1	The Cycling Ring Checksum (CRC) of the data stored in the Power Board EEPROM does not match the stored CRC.	<p>Cycle power to the drive.</p> <p>In frame 9...14 drives, check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic cable connections.</p>
40	SLink Mult Oflow	2	A SynchLink Multiplier Overflow has occurred. <a href="#">Par 927</a> [SL Mult State] displays SynchLink multiplier overflow errors.	Configured with <a href="#">Par 390</a> [SL MultErr Cnfg].
41	Ridethru Timeout	1	The drive has been in a bus loss ridethrough condition for more than two seconds (default). The ridethrough timeout is configurable in <a href="#">Par 407</a> [Power Loss Time].	<ul style="list-style-type: none"> <li>Verify the AC Line.</li> <li>Verify the value in <a href="#">Par 407</a> [Power Loss Time].</li> </ul>
42	DC Bus Undervolt	2	The Bus voltage has fallen below the level configured in <a href="#">Par 409</a> [Line Undervolts].	<p>Verify the AC Line.</p> <p>In frames 1...4 and 9...14, verify that the precharge resistor is present (with power off, there should be a resistance between DC+ and BR+).</p> <p>In frames 5 &amp; 6, check the precharge board for errors. See the precharge board LED for fault sequence.</p> <p>Configured with <a href="#">Par 393</a> [BusUndervoltCnfg].</p>

No.	Name	Type <sup>(1)</sup>	Description	Action
43	VoltageFdbk Loss	2	A loss of motor or DC Bus voltage feedback has occurred because of a communication failure between Motor Control and Voltage Feedback board.	<ul style="list-style-type: none"> <li>Check the communication line between Motor Control (MC) and the Voltage Feedback board.</li> <li>Replace the Voltage Feedback board.</li> </ul> Configured with <a href="#">Par 394</a> [VoltFdbkLossCnfg].
44	Runtime Data Rst	3	Runtime data (hours, energy) has been reset to zero due to a checksum error.	(Informational Only)
45	Enable Health	1	The safety circuit is active.	Check the input signal to the safety circuit.
46	Interp Out Synch	2	The interpolator for position feedback lost synchronization with the Velocity Position Loop (VPL).	Configured with <a href="#">Par 378</a> [Interp Flt Cnfg].
47	MC CML Task Fail	3	The Current Minor Loop (CML) task has been delayed or run with an incorrect interval.	Cycle power to the drive.
48	No Ctrl Device	1	The controlling device (HIM or controller) has been disconnected while the drive was running.	Check the controlling device connections to the drive.
49	DPI Loss Port 1	2	The device at DPI port 1 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 1. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
50	DPI Loss Port 2	2	The device at DPI port 2 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 2. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
51	DPI Loss Port 3	2	The device at DPI port 3 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 3. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
52	DPI Loss Port 4	2	The device at DPI port 4 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 4. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
53	DPI Loss Port 5	2	The device at DPI port 5 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 5. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
54	DPI Loss Port 6	2	The device at DPI port 6 has stopped communicating with the drive. A SCANport device is connected to a drive operating DPI devices at 500k Baud.	Verify that the DPI device is present and functional at port 6. Configured with <a href="#">Par 391</a> [DPI CommLoss Cfg].
55	Net Loss DPI P1	2	A communications fault has occurred between the communication adapter at DPI port 1 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
56	Net Loss DPI P2	2	A communications fault has occurred between the communication adapter at DPI port 2 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
57	Net Loss DPI P3	2	A communications fault has occurred between the communication adapter at DPI port 3 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
58	Net Loss DPI P4	2	A communications fault has occurred between the communication adapter at DPI port 4 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
59	Net Loss DPI P5	2	A communications fault has occurred between the communication adapter at DPI port 5 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
60	Net Loss DPI P6	2	A communications fault has occurred between the communication adapter at DPI port 6 and the network.	Verify the network connection. Verify the status of network. Configured with <a href="#">Par 392</a> [NetLoss DPI Cnfg].
61	Logix Out of Run	2	The DriveLogix controller is in a Non-Run mode. Non-Run modes include program, remote-program and faulted modes.	Clear the fault. Configured with <a href="#">Par 386</a> [Lgx OutOfRunCnfg].
62	Logix Timeout	2	The communication connection to the DriveLogix controller has timed out.	Configured with <a href="#">Par 387</a> [Lgx Timeout Cnfg].
63	Logix Closed	2	The DriveLogix controller has closed the Controller to Drive connection.	Verify that the Drive is present in the Controller I/O configuration. Configured with <a href="#">Par 388</a> [Lgx Clod Cnfg].
64	Logix Link Chng	2	A required link in the Controller to Drive Communication Format has been modified.	Clear the fault. Configured with <a href="#">Par 389</a> [Lgx LinkChngCnfg].
65	HiHp In PhaseLs	2	(High Horse Power Only) AC Input Phase Loss - the AC input phase voltage has fallen.	<ul style="list-style-type: none"> <li>Check for voltage on each AC input phase.</li> <li>Check the status of each external AC input fuse.</li> </ul> Configured with <a href="#">Par 370</a> [HiHp InPhsLs Cfg].

No.	Name	Type <sup>(1)</sup>	Description	Action
66	HiHp Bus Com Dly	1	(High Horse Power Only) Bus Communication Time Delay - the communication bus has delayed feedback or bad communication quality.	Check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic connections.
67	HiHp Bus Link Ls	1	(High Horse Power Only) Bus Communication Link Loss - bus communication between the Fiber Optic Power Interface board and the Voltage Feedback board has stopped.	Check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic connections.
68	HiHp Bus CRC Er	1	(High Horse Power Only) Bus Communication CRC Error - too many Cycling Ring Checksum (CRC) errors have occurred in the communication bus.  A fast power cycle may cause the 700S Main Control board to attempt to communicate with the ASIC board before the ASIC board is energized.	Check the communication bus lines - 10 pin connector on the Main Control Board, Fiber Optic Power Interface board, and fiber optic connections.
69	HiHp Bus WtchDog	1	(High Horse Power Only) Bus Communication Watchdog Error, No message (packets) came through in the communication bus - a watchdog error was detected.	Check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic connections.
70	HiHp Fan Fdbk Ls	1	(High Horse Power Only) Fan Feedback Loss - an inverter cooling fan did not send active feedback or did not work.	<ul style="list-style-type: none"> <li>Check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic connections.</li> <li>Check the inverter cooling fans.</li> </ul>
71	HiHp Drv OvrLoad	1	(High Horse Power Only) Drive Overload - the drive's operating point has exceeded the intermittent current rating and a foldback to the continuous rating in <a href="#">Par 400</a> [Rated Amps] has occurred.	Reduce the mechanical load.
72	HiHp PwrBd PrcEr	1	(High Horse Power Only) Power Board Processor Error - a processor on the Fiber Optic Power Interface circuit board has detected a self diagnostic problem.	Replace the Fiber Optic Power Interface board.
73	HiHp PrChrg Cntc	1	(High Horse Power Only) Precharge Contactor Fault - the precharge contactor did not send back active feedback.	<ul style="list-style-type: none"> <li>If the drive has AC input, check the precharge resistor and contactor.</li> <li>If the drive has DC input, check the jumper for precharge bypass switch on the Fiber Optic Power Interface board.</li> </ul>
74	HiHp PwrEE Error	1	(High Horse Power Only) Power EEPROM Error - the Cycling Ring Checksum (CRC) of the data stored in the Fiber Optic Power Interface board's EEPROM does not match the stored CRC.	<ul style="list-style-type: none"> <li>Cycle power to the drive.</li> <li>Check the communication bus lines - 10 pin connector on the Main Control board, Fiber Optic Power Interface board, and fiber optic connections.</li> </ul>
75	HiHP PwrBd Otemp	1	(High Horse Power Only) Power Board Over Temperature - the temperature of the Fiber Optic Power Interface board has exceeded 85° C.	Lower the ambient temperature.
76	HiHP HardwareVer	3	(High Horse Power Star-coupler Frame 12 & 14 Drives Only) The left and right side inverter units have different current ratings or the ASIC board or the Fiber Optic Power Interface board is not functioning.	Check the version of each inverter (left and right units), then replace the unit.
77	HiHP CurrUnblnce	3	(High Horse Power Star-coupler Frame 12 & 14 Drives Only) The output current between the left and right side inverter units are unbalanced (20% of current feedback rating, e.g. 184A = 920A * 0.2).	Check the motor wiring for each unit.
78	HiHP VoltUnblnce	3	(High Horse Power Star-coupler Frame 12 & 14 Drives Only) The bus voltage for the left and right side inverter units is unbalanced (6% of normal bus voltage, e.g. 41Vdc = 675Vdc * 0.06).	Check the input power and wiring for each unit.
79	HiHP Bus Data	3	(High Horse Power Star-coupler Frame 12 & 14 Drives Only) Communication Bus data are mismatched between the left and right side unit.	Check communication bus lines - 10 pin connector on Main Control board, Fiber Optic Power Interface board and fiber optic connections.
81	+ Soft Over Trvl	2	(Motion Only) The position feedback exceeds the maximum positive travel setting in <a href="#">Par 694</a> [Motn Mx Pos Trvl].	Configured with <a href="#">Par 395</a> [+Sft OvrTrvlCnfg].
82	- Soft Over Trvl	2	(Motion Only) The position feedback exceeds the maximum negative travel setting in <a href="#">Par 695</a> [Motn Mx Neg Trvl].	Configured with <a href="#">Par 396</a> [-Sft OvrTrvlCnfg].
83	+ Hard Over Trvl	2	(Motion Only) The signal for the hardware positive over travel appears on a digital input.	Configured with <a href="#">Par 397</a> [+Hrd OvrTrvlCnfg].
84	- Hard Over Trvl	2	(Motion Only) The signal for the hardware negative over travel appears on a digital input.	Configured with <a href="#">Par 398</a> [-Hrd OvrTrvlCnfg].

No.	Name	Type <sup>(1)</sup>	Description	Action
85	Position Error	2	(Motion Only) The value of <a href="#">Par 769</a> [Position Error] exceeded the value of <a href="#">Par 696</a> [Motn PositErrTol].	Verify the value in <a href="#">Par 696</a> [Motn PositErrTol]. Configured with <a href="#">Par 399</a> [Position ErrCnfg].
86	Drive Homing	3	When the drive is in Drive Homing mode ( <a href="#">Par 740</a> [Position Control]), bit 24 or bit 27 is On), the Drive Homing Alarm triggers and the drive moves to a home position automatically.	Check <a href="#">Par 740</a> [Position Control], bit14 "Find Home" or bit 27 "Return Home".
88	Stahl Optics	3	The Linear Stahl encoder detected a fault. <a href="#">Par 291</a> [Lin1Stahl Status] displays the details of the fault.	<ul style="list-style-type: none"> <li>Reconnect encoder or replace encoder.</li> <li>Reconnect option feedback card.</li> </ul>
89	Drv Waking	3	The Wake timer is counting toward a value that will start the drive.	
92	Ride Thru	3	The Bus voltage has dropped to the Ride-Through level specified in <a href="#">Par 408</a> [Power Loss Level].	Check the AC input voltage and the DC bus voltage.
93	+/- 12volt Power Alarm	3	The 12V DC control voltage is outside the tolerance range (Alarm). The positive voltage power exceeds +15.50 V DC. The negative voltage power exceeds -15.50V DC.	
94	Analog In 1 Loss	1	Analog Input channel 1 is lost. For configuration of Analog Input channel 1, see <a href="#">Par 1093</a> [Anlg In1LossCnfg].	<ul style="list-style-type: none"> <li>Check condition of Analog Input channel 1.</li> <li>Change configuration for parameter 1093 [Anlg In1LossCnfg].</li> </ul>
95	Analog In 2 Loss	1	Analog Input channel 2 is lost. For configuration of Analog Input channel 2, see <a href="#">Par 1094</a> [Anlg In2LossCnfg].	<ul style="list-style-type: none"> <li>Check condition of Analog Input channel 2.</li> <li>Change configuration for parameter 1094 [Anlg In2LossCnfg].</li> </ul>
96	Analog In 3 Loss	1	Analog Input channel 3 is lost. For configuration of Analog Input channel 3, see <a href="#">Par 1095</a> [Anlg In3LossCnfg].	<ul style="list-style-type: none"> <li>Check condition of Analog Input channel 3.</li> <li>Change configuration for parameter 1095 [Anlg In3LossCnfg].</li> </ul>
129	Faults Cleared	*	Indicates that all faults have been cleared.	*Informational only.
130	Fault Q Cleared	*	Indicates that the fault queue has been cleared.	*Informational only.
131	Alarm Cleared	*	Indicates that all alarms have been cleared.	*Informational only.
132	Alarm Q Cleared	*	Indicates that the alarm queue has been cleared.	*Informational only.

## Notes:

## Human Interface Module Overview

This section provides information on using the PowerFlex 7-Class (DPI) Human Interface Module (HIM). Refer to the PowerFlex 20-HIM-A6 and 20-HIM-C6S HIM User Manual, publication [20HIM-UM001](#), for information on using the Enhanced HIM (if installed).

Topic	Page
External and Internal Connections	<a href="#">153</a>
LCD Display Elements	<a href="#">154</a>
HIM Key Functions	<a href="#">154</a>
Alternate (ALT) Functions	<a href="#">155</a>
Access the Start-Up Routine	<a href="#">155</a>
Menu Structure	<a href="#">156</a>
View and Edit Parameters	<a href="#">158</a>
Parameter Links	<a href="#">159</a>
Remove/Install the HIM	<a href="#">160</a>

### External and Internal Connections

The PowerFlex 700S provides a cable connection for a hand-held HIM or Port Expander/Splitter (Frame 1 shown).

No.	Connector	Description
1	DPI Port 1	HIM connection when installed in cover.
2	DPI Port 2	Cable connection for handheld and remote options.
3	DPI Port 3 or 2	Splitter cable connected to DPI Port 2 provides additional port.

## LCD Display Elements

Display	Description
	Direction   Drive Status   Alarm   Auto/Man   Information
	Commanded or Output Speed
	Programming / Monitoring / Troubleshooting

## HIM Key Functions

Key	Description
	Exit a menu, cancel a change to a parameter value, or acknowledge a fault/alarm.
	Select a digit, select a bit, or enter edit mode in a parameter screen.
	Scroll through options, increase a value, or toggle a bit.
	Scroll through options, decrease a value, or toggle a bit.
	Enter a menu, enter edit mode in a parameter screen, or save a change to a parameter value.
	Access the function associated with a programming or numeric key. Provides access to the Large Format Display.
	Start the drive.
	Stop the drive or clear a fault.
	Jog the drive.
	Change direction.
	Increase speed.
	Decrease speed.

Human Interface Module (HIM)

The keys are active only when the HIM is granted Manual Control or Par 27 [Speed Ref A I] / 28 [Speed Ref B I] is set to:  
 Option 12 "DPI Port 1" for a HIM installed in the drive cover  
 or  
 Option 13 "DPI Port 2" for a HIM connected by cable for handheld or remote installation option

## Alternate (ALT) Functions

Follow these steps to use an ALT function.

1. Press the ALT key and release it.
2. Press the programming key for the desired function as identified in [Table 8](#).

**Table 8 - ALT Key Functions**

ALT Key and then ...		Function
		S.M.A.R.T. Function not available.
		View Allows the selection of how parameters will be viewed or detailed information about a parameter or component.
		Lang Function not available.
		Auto/Man Function not available.
		Remove Allows HIM removal without causing a fault if the HIM is not the last controlling device and does not have manual control of the drive.
		Exp Allows the value to be entered as an exponent.
		Param # Allows entry of a parameter number for viewing/editing.

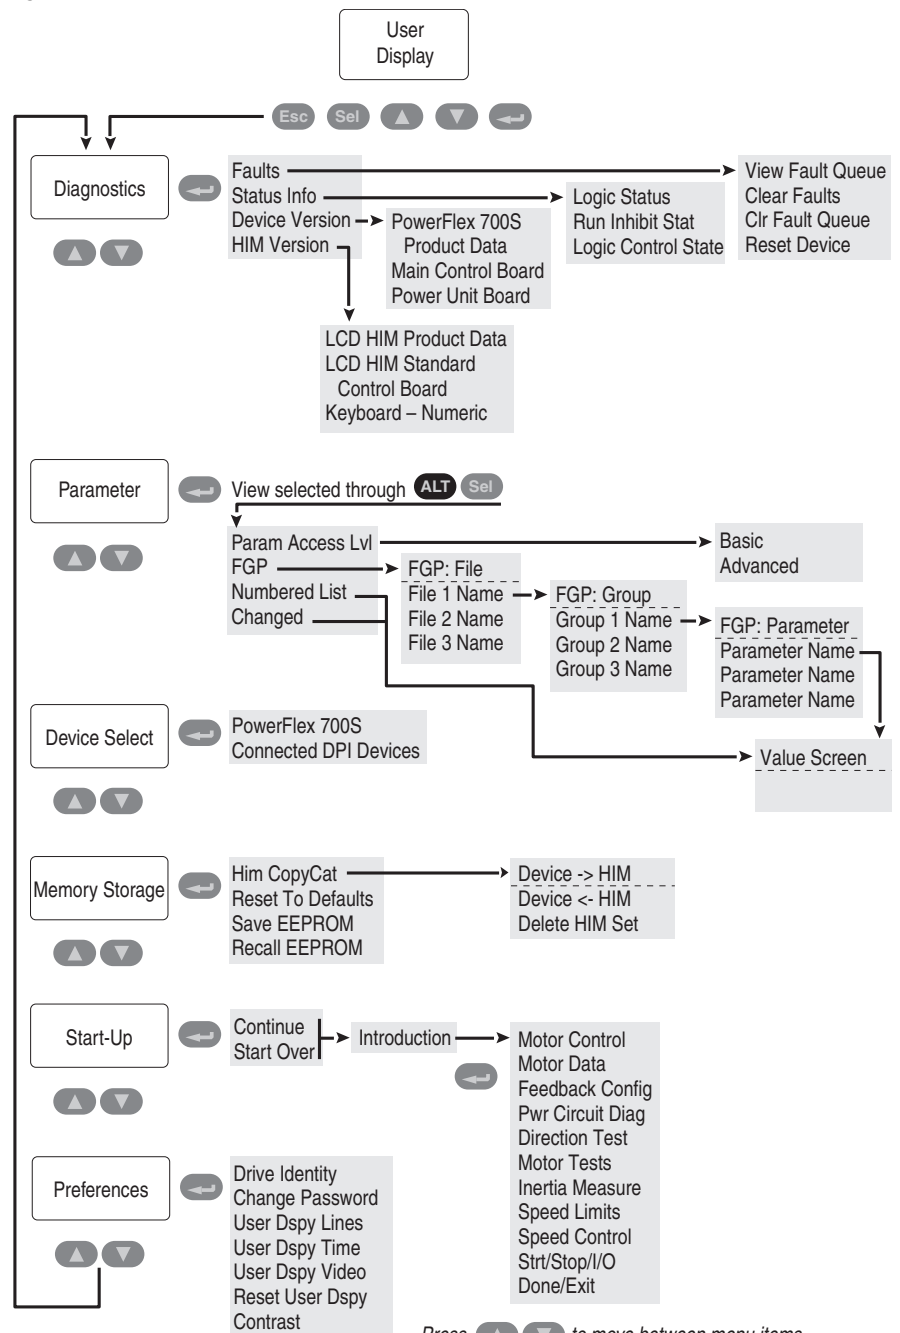

## Access the Start-Up Routine

The start-up routine asks simple yes or no questions and prompts you to input required information. To access the Start-Up routine from the User Display screen:

1. On the User Display screen, press  .  
The Main menu displays.
2. Use the  key to scroll to “Start-Up” in the list and press  .
3. select “Continue” and press  .  
The PowerFlex 700S Start-Up screen displays.
4. Follow the prompts as necessary.

# Menu Structure

Figure 2 - HIM Menu Structure

Press to move between menu items

Press to select a menu item

Press to move 1 level back in the menu structure

Press to select how to view parameters

## Diagnostics Menu

When a fault trips the drive, use this menu to access detailed data about the drive.

Option	Description
Faults	View the fault queue or fault information, clear faults or resets the drive.
Status Info	View parameters that display status information about the drive.
Device Version	View the firmware version and hardware series of components.
HIM Version	View the firmware version and hardware series of the HIM.

## Parameter Menu

Refer to View and Edit Parameters on page [158](#).

## Device Select Menu

Use this menu to access parameters in connected peripheral devices.

## Memory Storage Menu

Drive data can be saved to, or recalled from, the HIM or EEPROM. EEPROM is permanent non-volatile drive memory. HIM sets are files stored in permanent non-volatile HIM memory.

Option	Description
<u>HIM Copycat</u> Device -> HIM Device <- HIM	Save data to a HIM set, load data from a HIM set to active drive memory or delete a HIM set.
EEPROM	Save data to EEPROM, load data from EEPROM to active drive memory or name a User set.
Reset To Defaults	Restore the drive to its factory-default settings.

---

<b>IMPORTANT</b>	When loading data from a HIM set via the Copycat function, values for parameters 81 [Spd Reg P Gain] and 82 [Spd Reg I Gain] are re-calculated and overwritten due to parameter 90 [Spd Reg BW] being set to the default value of "10". To avoid overwriting the values of parameters 81 and 82, record the values before performing the Copycat from a HIM to the drive, manually update the values after the download and set parameter 90 to "0".
------------------	--

---

## Start Up Menu

See [Figure 1](#) on page [16](#).

## Preferences Menu

The HIM and drive have features that you can customize.

Option	Description
Drive Identity	Add text to identify the drive.
Change Password	Enable/disable or modify the password.
User Dspy Lines	Select the display, parameter, scale and text for the User Display. The User Display is two lines of user-defined data that appears when the HIM is not being used for programming.
User Dspy Time	Set the wait time for the User Display or enable/disable it.
User Dspy Video	Select Reverse or Normal video for the Frequency and User Display lines.
Reset User Dspy	Return all the options for the User Display to factory default values.

The PowerFlex 700S drive is initially set to Basic Parameter View. To view all parameters, set parameter 196 [ParamAccessLvl] to option 1 “Advanced”. Parameter 196 is not affected by the Reset to Defaults function.

## View and Edit Parameters

### LCD HIM

Steps:	Key(s):	Example Displays”
1. In the Main Menu, press the Up Arrow or Down Arrow to scroll to “Parameter.”	▲ or ▼	
2. Press Enter. “FGP File” appears on the top line and the first three files appear below it.	↵	<div> FGP: File  Monitor  Motor Control  Dynamic Control </div>
3. Press the Up Arrow or Down Arrow to scroll through the files.	▲ or ▼	
4. Press Enter to select a file. The groups in the file are displayed under it.	↵	<div> FGP: Group  Motor Data  Monitoring  Drive Config </div>
5. Repeat steps 3 and 4 to select a group and then a parameter. The parameter value screen will appear.		
6. Press Enter to edit the parameter.	↵	<div> FGP: Parameter  Motor NP Volts  Motor NP FLA  Motor NP Hertz </div>
7. Press the Up Arrow or Down Arrow to change the value. If desired, press Sel to move from digit to digit, letter to letter, or bit to bit. The digit or bit that you can change will be highlighted.	▲ or ▼	
8. Press Enter to save the value. If you want to cancel a change, press Esc.	Sel	<div> FGP: Motor NP FLA Par 2  1.000 Amps  [ALT][VIEW] -&gt; Limits </div>
9. Press the Up Arrow or Down Arrow to scroll through the parameters in the group, or press Esc to return to the group list.	▲ or ▼	
	Esc	<div> FGP: Motor NP FLA Par 2  1.500 Amps  [ALT][VIEW] -&gt; Limits </div>

### Numeric Keypad Shortcut

If using a HIM with a numeric keypad, press the ALT key and the +/– key to access the parameter by typing its number.

## Parameter Links

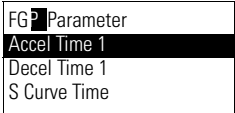

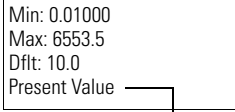

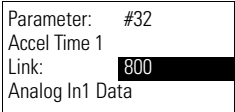

Most parameter values are entered directly by the user. However, certain parameters can be “linked,” so the value of one parameter becomes the value of another. For Example, the value of an analog input can be linked to [Accel Time 1]. Rather than entering an acceleration time directly (via HIM), the link allows the value to change by varying the analog signal. This can provide additional flexibility for advanced applications.

Each link has 2 components:

- Source parameter – sender of information.
- Destination parameter – receiver of information.

Most parameters can be a source of data for a link, except parameter values that contain an integer representing an ENUM (text choice). The are not allowed, since the integer is not actual data (it represents a value). Refer to the list of parameters in Chapter 2 Programming and Parameters for information on which parameters can be destinations. All links must be established between equal data types (parameter value formatted in floating point can only source data to a destination parameter value that is also floating point).

### Establishing A Link

Steps:	Key(s):	Example Displays:
1. Select a valid destination parameter to be linked. The parameter value screen displays.		
2. Press Enter to edit the parameter. The cursor will move to the value line.		
3. Press ALT and then View (Sel). Next, press the Up or Down Arrow to change “Present Value” to “Define Link”. Press Enter.	 or 	
4. Enter the Source Parameter Number and press Enter.		
The linked parameter can now be viewed two different ways by repeating steps 1...4 and selecting “Present Value” or “Define Link.” If an attempt is made to edit the value of a linked parameter, “Parameter is Linked!” will be displayed, indicating that the value is coming from a source parameter and cannot be edited.		
5. To remove a link, repeat steps 1...5 and change the source parameter number to zero (0).		
6. Press Esc to return to the group list.		

## Remove/Install the HIM

The HIM can be removed or installed while the drive is powered.

Steps:	Key(s):	Example Display:
<p>To remove the HIM . . .</p> <ol style="list-style-type: none"><li>1. Press ALT and then Enter (Remove). The Remove HIM configuration screen appears.</li><li>2. Press Enter to confirm that you want to remove the HIM.</li><li>3. Remove the HIM from the drive or disconnect the cable.</li></ol> <p>To install HIM . . .</p> <ul style="list-style-type: none"><li>• Insert the HIM into drive or re-connect cable.</li></ul>	 + 	<div><p>Remove Op Intrfc: Press Enter to Disconnect Op Intfc? (Port 2 Control)</p></div>

## Application Notes

For additional application notes, refer to the PowerFlex 700S Adjustable Frequency AC Drive with Phase II Control Reference Manual, publication [PFLEX-RM003](#).

## DPI Communication Configurations

## Typical Programmable Controller Configurations

**IMPORTANT** If programs are written that continuously write information to the drive, care must be taken to properly format the block transfer. If attribute 10 is selected for the block transfer, values will be written only to RAM and will not be saved by the drive. This is the preferred attribute for continuous transfers. If attribute 9 is selected, each program scan will complete a write to the drives non-volatile memory (EEPROM). Since the EEPROM has a fixed number of allowed writes, continuous block transfers will quickly damage the EEPROM. Do Not assign attribute 9 to continuous block transfers. Refer to the individual communications adapter User Manual for additional details.

(1) See parameter 304 - [Limit Status] for a description of the limit status conditions.

## DPI Device Limitations

PowerFlex 700S drives use a 450 mA device on the 12V DPI power supply. Due to the typical load of a external DPI device of 140 mA, there is a three DPI device limit.

## Motor Control Mode

Parameter 485 [Motor Ctrl Mode] selects the type of motor control to use. This parameter is set during the HIM assisted startup when asked to select the Motor Control. The settings for Parameter 485 [Motor Ctrl Mode] are:

- 0 - “FOC” selects field oriented control. Field oriented control is used with AC squirrel cage induction motors for high performance.
- 1 - “FOC 1” selects field oriented control and is only used for a specific type of AC induction motor with motor thermal feedback. Note: “FOC 2” is used only for motors manufactured by Reliance Electric - Japan.
- 2 - “Pmag Motor” selects control for permanent magnet motors.
- 3 - “V/Hz” selects volts per hertz control. This selection is available in v2.003 and later.
- 4 - “Test” puts the drive in a test mode to perform the direction test. “Test” is automatically selected during the direction test portion of the Start-Up routine and does not need to be set manually by the user.

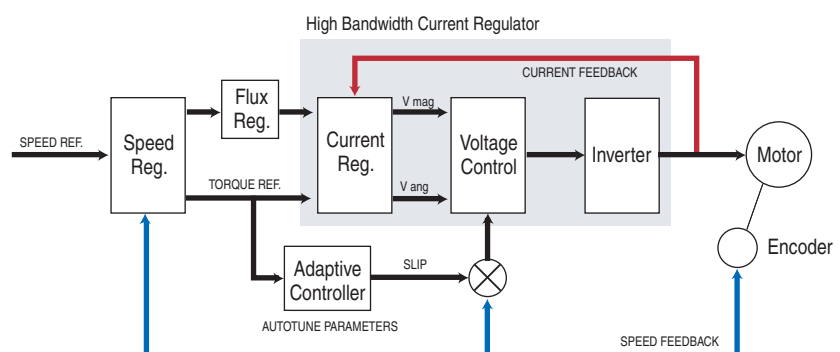

Field Oriented Control, Permanent Magnet Motor Control, and Volts/Hertz Control are described in further detail below.

## Field Oriented Control

Field oriented control is used with AC squirrel cage induction motors for high performance. Motor data and an autotune is required for correct operation in this mode. Field oriented control is selected by setting parameter 485 [Motor Ctrl Mode] = 0 “FOC”.

In field oriented control, the drive takes the speed reference that is specified by the Speed Reference selection Block and compares it to the speed feedback. The speed regulator uses Proportional and Integral gains to adjust the torque reference for the motor. This torque reference attempts to operate the motor at the specified speed. The torque reference is then converted to the torque producing component of the motor current.

This type of speed regulator produces a high bandwidth response to speed command and load changes. In field oriented control the flux and torque producing currents are independently controlled. Therefore, you can send a torque reference directly instead of a speed reference. The independent flux control also allows you to reduce the flux in order to run above base motor speed.

## Permanent Magnet Control

Permanent magnet control is used with permanent magnet motors. Permanent magnet motor control is selected by setting parameter 485 [Motor Ctrl Mode] = 2 “Pmag Motor”.

- Permanent magnet motor control requires either a Hi-Resolution Stegmann encoder or compatible resolver feedback on the motor.
- Motor data and an autotune is required for correct operation in this mode. Refer to PowerFlex 700S Permanent Magnet Motor Specifications on page [201](#) for a list of compatible Allen-Bradley permanent magnet motors and motor data to be used with the PowerFlex 700S Phase II drives.

## Volts/Hertz Control - v2.003 and Later

Volts/Hertz control is used in fan, pump, or multi-motor applications. Volts/Hertz operation creates a fixed relationship between output voltage and output frequency.

### *Configuration:*

Volts/Hertz control is selected by setting parameter 485 [Motor Ctrl Mode] = 3 “V/Hz”.

Volts/Hertz allows a wide variety of patterns using linear segments. The default configuration is a straight line from zero to rated voltage and frequency. This is the same volts/hertz ratio that the motor would see if it were started across the line. As seen in the diagram below, the volts/hertz ratio can be changed to provide increased torque performance when required. The shaping takes place by programming five distinct points on the curve:

1. Parameter 527 [Start/Acc Boost] is used to create additional torque for breakaway from zero speed and acceleration of heavy loads at lower speeds.
2. Parameter 528 [Run Boost] is used to create additional running torque at low speeds. The value is typically less than the required acceleration torque. The drive will lower the boost voltage to this level when running at low speeds (not accelerating). This reduces excess motor heating that could be caused if the higher start/accel boost level were used.
3. Parameters 529 [Break Voltage] and 530 [Break Frequency] are used to increase the slope of the lower portion of the Volts/Hertz curve, providing additional torque.
4. Parameters 1 [Motor NP Volts] and 3 [Motor NP Hertz] set the upper portion of the curve to match the motor design and mark the beginning of the constant horsepower region.

5. Parameters 531 [Maximum Voltage] and 532 [Maximum Freq] slope that portion of the curve used above base speed.

## Motor Overload

### Setting Parameter 338 [Mtr I2T Spd Min]

Parameter 338 [Mtr I2T Spd Min] sets the minimum speed for the motor overload ( $I^2T$ ) function. This value determines the minimum speed the drive should run below the minimum current threshold set in parameter 337 [Mtr I2T Curr Min]. Parameters 338 [Mtr I2T Spd Min] and 337 [Mtr I2T Curr Min] set the first current/speed breakpoint. From this point the current threshold is linear to the value specified by the motor service factor set in parameter 336 [Motor OL Factor]. Set this parameter to the minimum value for the motor overload trip to vary in time at low speeds.

**Figure 3 - Motor Overload Curve When Par 338 [Mtr I2T Spd Min] Is Less Than 1.0**

When motor current exceeds the value of the curve, the motor overload output integrates. A motor overload exception event occurs when the value of the motor overload output reaches 1.0. The value of the motor overload output is visible in Par 330 [Fault TP Data] when the value of Par 329 [Fault TP I] equals 13.

**Figure 4 - Motor Overload Curve When Par 338 [Mtr I2T Spd Min] Is Equal To 1.0**

When the value of Par 338 [Mtr I2T Spd Min] equals 1.0, the curve is flat - at the value of rated motor current times the value of Par 336 [Motor OL Factor]. If the motor current exceeds the value of the curve, the value of the motor overload output integrates. The value of the motor overload output is visible in Par 330 [Fault TP Data] when the value of Par 329 [Fault TP I] equals 13.

## Motor Overload Memory Retention Per 2005 NEC

The PowerFlex 700S drive with Phase II control (firmware 3.001 and higher) has the ability to retain the motor overload count at power down per the 2005 NEC motor overtemperature requirement.

- To enable motor overload memory retention, set bit 20 “Motor OL Ret” of parameter 153 [Control Options] to “1”.
- To disable motor overload memory retention, set bit 20 “Motor OL Ret” of parameter 153 [Control Options] to “0”.

The motor overload count value can be viewed in parameter 341 [Mtr I2T Count].

## Setpt 1 Data

Provides data for comparison of Par 172 [Setpt 1 Data] to Par 173 [Setpt1 TripPoint], driving bit 16 “At Setpt 1” of Par 155 [Logic Status].

**Figure 5 - At Setpoint 1 Status**

## Setpt 2 Data

Provides data for comparison of Par175 [Setpt 2 Data] to Par 176 [Setpt2 TripPoint], driving bit 17 “Above Setpt 2” of Par 155 [Logic Status].

**Figure 6 - Above Setpoint 2 Status**

## Stop Dwell Time

Sets an adjustable delay time between detecting zero speed and disabling the speed and torque regulators, when responding to a stop command.

---

**IMPORTANT** Consult industry and local codes when setting the value of this parameter.

---

**Figure 7 - Drive Operation When Par 154 [Stop Dwell Time] Equals Zero**

**Figure 8 - Drive Operation When Par 154 [Stop Dwell Time] is Greater Than Zero**

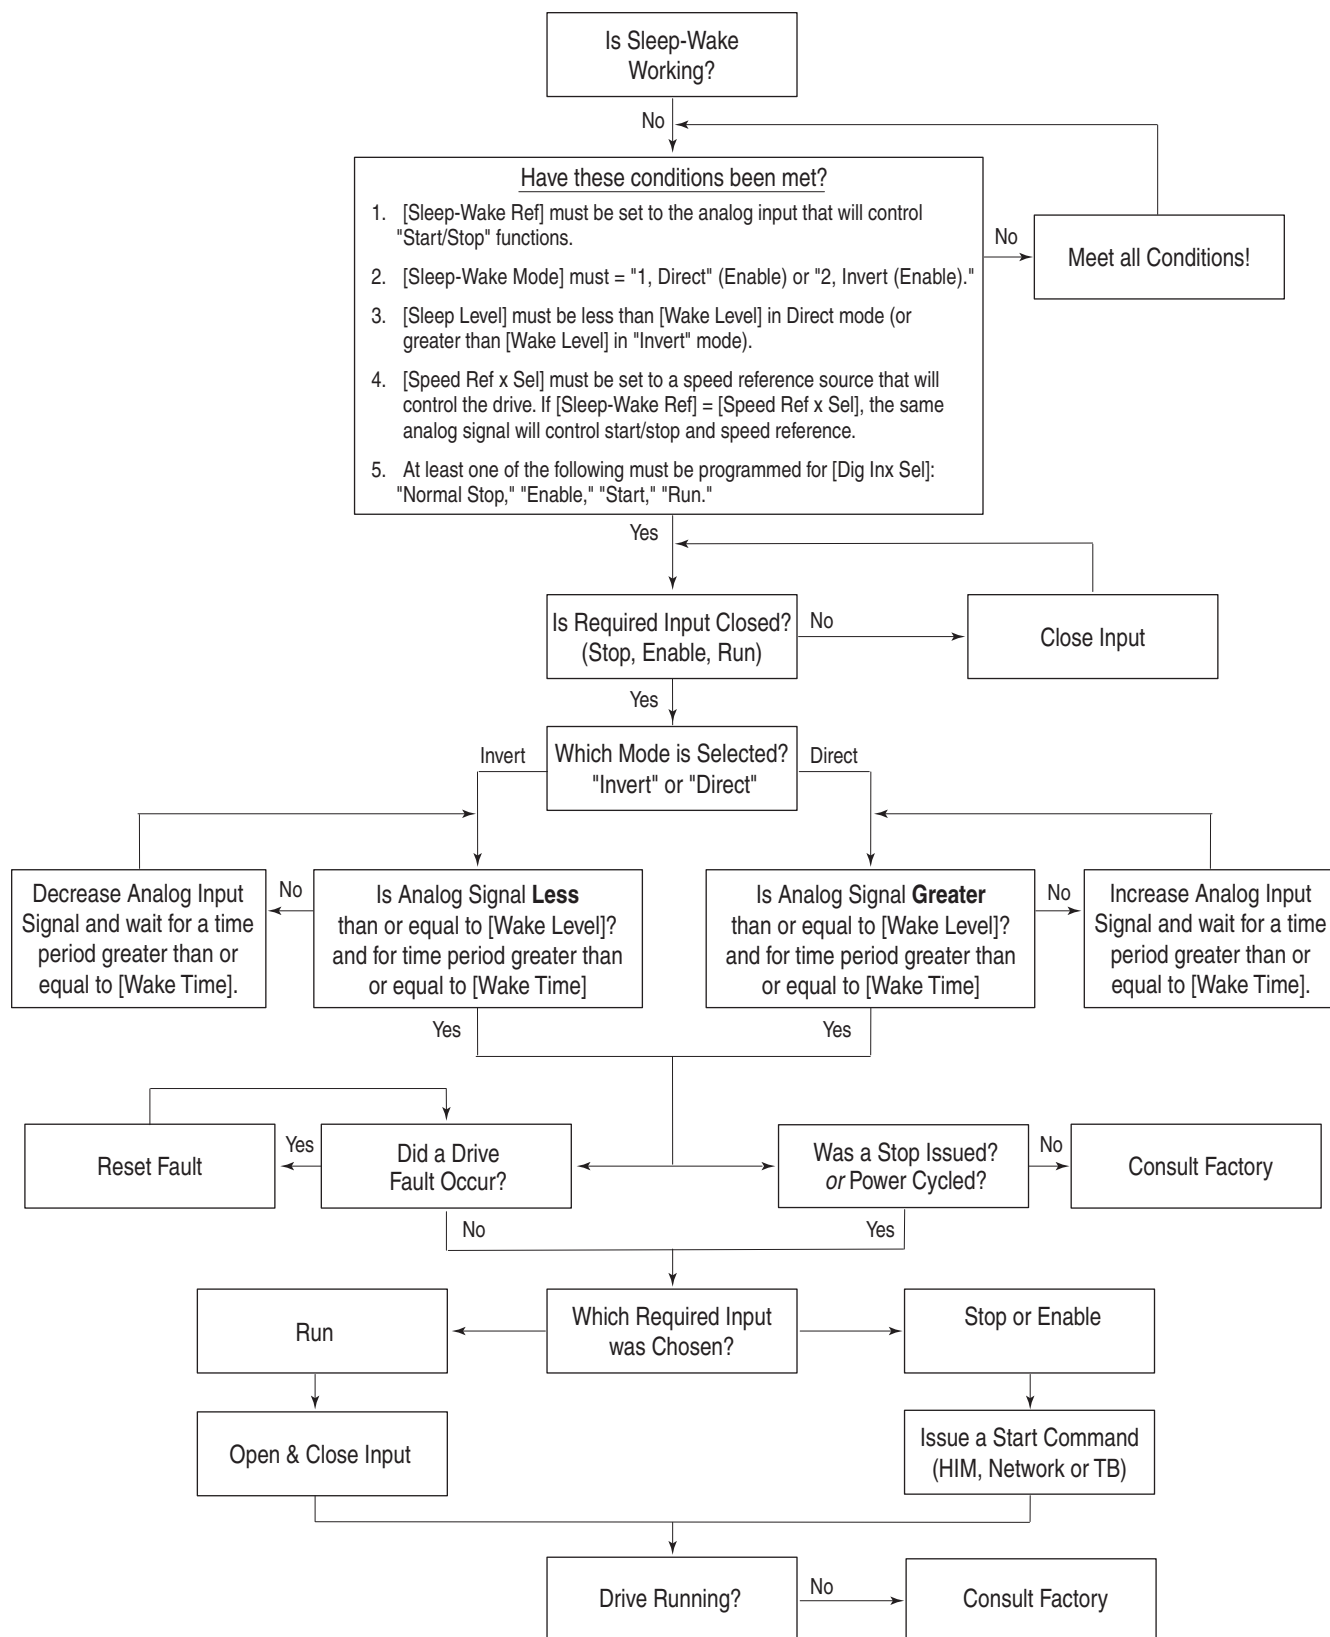

## Sleep-Wake Mode

This function stops (sleep) and starts (wake) the drive based on separately configured analog input levels rather than discrete start and stop signals. When enabled in “Direct” mode, the drive will start (wake) when an analog signal is greater than or equal to the user specified [Wake Level], and stop the drive when an analog signal is less than or equal to the user specified [Sleep Level]. When Sleep-Wake mode is enabled for “Invert” mode, the drive will start (wake) when an analog signal is less than or equal to the user-specified [Wake Level], and stop the drive when an analog signal is greater than or equal to the user-specified [Sleep Level]. See [Figure 9](#) on page [172](#) for more information on Sleep-Wake mode configuration.

### Definitions

- Wake - A start command generated when the analog input value remains above [Wake Level] (or below when Invert mode is active) for a time greater than [Wake Time].
- Sleep - A Stop command generated when the analog input value remains below [Sleep Level] (or above when Invert mode is active) for a time greater than [Sleep Time].
- Speed Reference – The active speed command to the drive as selected by drive logic and [Speed Ref x Sel].
- Start Command - A command generated by pressing the Start button on the HIM, closing a digital input programmed for Start, Run, Run Forward or Run Reverse.

(1) Due to low inertia and low electrical time constant characteristics, it is recommended that the system inertia be at least 0.02 seconds when using this motor for constant velocity applications.

## **ATEX Approved PowerFlex 700S, Phase II Drives in Group II Category (2) Applications with ATEX Approved Motors**

### **General Information**

This document provides information on operation of an ATEX approved drive and ATEX approved motor. The motor is located in a defined hazardous environment, while the drive is not. A protective system is required to stop current flow to the motor when an over temperature condition has been sensed in the motor. When sensed, the drive will go into a stop condition. To restart the drive, the over temperature condition must be resolved, followed by a valid start command to the drive. The PowerFlex 700S Phase II drive must have the DriveGuard® Safe-Off with Second Encoder option board installed for ATEX applications. Consult the option board User Manual for installation instructions if necessary.

The drive is manufactured under the guidelines of the ATEX directive 94/9/EC. The Drives are in Group II Category (2) Applications with ATEX Approved Motors. Certification of the drive for the ATEX group and category on its nameplate requires installation, operation, and maintenance according to this document and to the requirements found in the User Manual and appropriate Motor Instruction Manual(s).

**ATTENTION:** Operation of this ATEX certified drive with an ATEX certified motor that is located in a hazardous environment requires additional installation, operation, and maintenance procedures beyond those stated in the standard User Manual. Equipment damage and/or personal injury may result if all additional instructions in this document are not observed.

---

## Motor Requirements

- The motor must be manufactured under the guidelines of the ATEX directive 94/9/EC. It must be installed, operated, and maintained per the motor manufacturer supplied instructions.
- Only motors with nameplates marked for use on an inverter power source, and labeled for specific hazardous areas, may be used in hazardous areas on inverter (variable frequency) power.
- When the motor is indicated for ATEX Group II Category 2 for use in gas environments (Category 2G) the motor must be of flameproof construction, EEx d (according to EN50018) or Ex d (according to EN60079-1 or IEC60079-1). Group II motors are marked with a temperature or a temperature code.
- When the motor is indicated for ATEX Group II Category 2 for use in dust environments (Category 2D) the motor must be protected by an enclosure (according to EN50281-1-1 or according to IEC61241-1: Ex tD). Group II motors are marked with a temperature.
- The motor over temperature signal supplied to the drive must be a normally closed contact (open during over temperature condition) compatible with the digital (logic) input circuitry of the drive. If multiple sensors are required in the motor, the connection at the drive must be the resultant of all required contacts wired in series.
- Refer to all product markings for additional cautions that may apply.
- Typical motor markings are contained on a motor certification nameplate similar to the sample below.

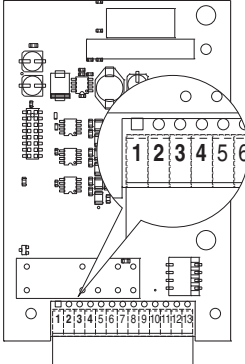

## Drive Wiring

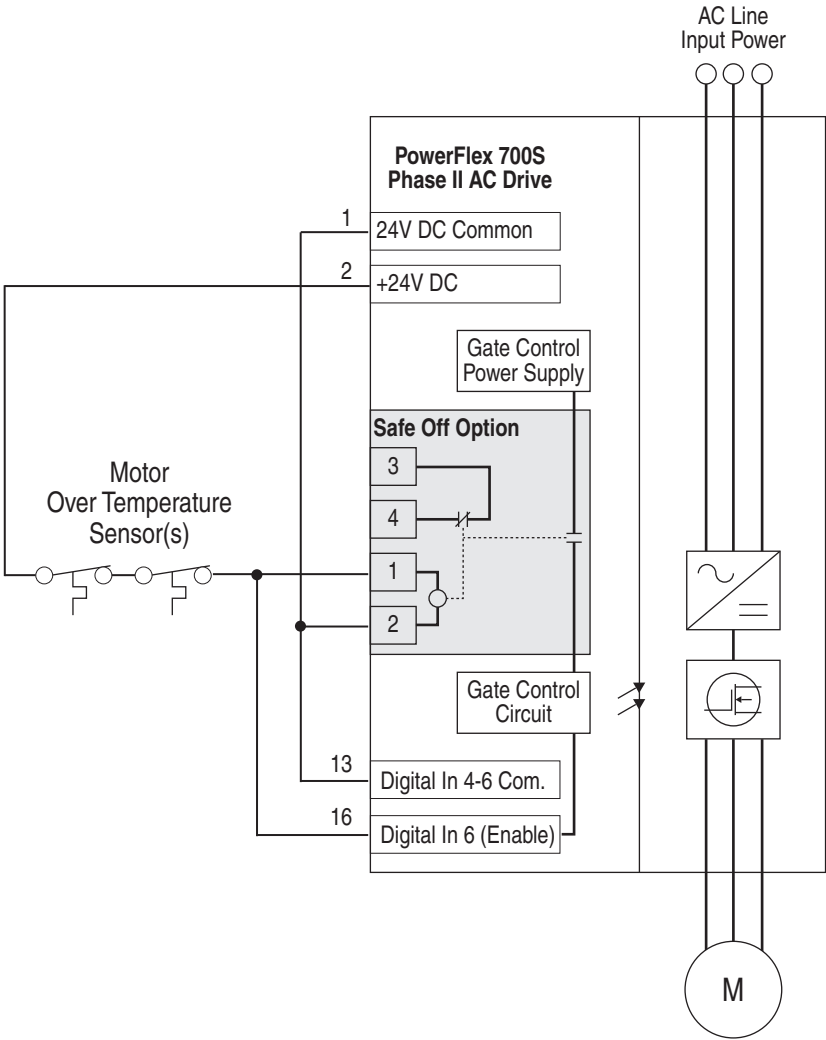

**IMPORTANT** ATEX certification of this drive requires that two separate inputs be configured to monitor a normally closed over temperature contact (or multiple contacts wired in series) presented to the drive from the motor.

The first input must energize “Digital Input6/Hardware Enable” on the drive control board (TB2, terminal 16). The second input must energize the relay coil on the DriveGuard® Safe-Off with Second Encoder option board (terminals 1 & 2 on the board). This option board must be installed in the drive for ATEX applications. It is offered with a 24V DC coil only. Both input signals are wired with respect to the drive's digital input common when using a control board with 24V I/O. Motor supplied contacts must have ratings compatible with the input circuit ratings and applied voltage level of the drive.

Safe-Off Terminal Descriptions

	No.	Signal	Description
	1	+24V DC	Connections for power to energize coil.
	2	24V Common	33.3 mA typical, 55 mA maximum.
	3	Monitor - N.C.	Normally closed contacts for monitoring relay status.
	4	Common - N.C.	Maximum Resistive Load: 250V AC / 30V DC / 50 VA / 60 Watts Maximum Inductive Load: 250V AC / 30V DC / 25 VA / 30 Watts

Wiring Example

## Drive Hardware Configuration

Digital Input 6 must be configured as a Hardware Enable. Ensure that Jumper P22 on the Main Control Board is set to HW Enable (Pins 2 and 4).`

## Operation Verification

At regular intervals during the life of the machine check the protective system for proper operation. Both channels shall be verified using the table below. How frequently the protective system is checked is dependent on the safety analysis of the machine section controlled by the drive.

Protective System Status	Drive In Safe State	Drive In Safe State	Drive In Safe State	Drive Able To Run
<b>Channel Operation</b>				
<b>Safe-Off Option</b> Terminals 1 & 2	No Power Applied	Power Applied	No Power Applied	Power Applied
<b>PowerFlex 700S Phase II</b> Enable Input	No Power Applied	No Power Applied	Power Applied	Power Applied
<b>Description For Verification</b>				
<b>Safe-Off Option</b> Monitor Contact Terminals 3 & 4	Closed	Open	Closed	Open
<b>PowerFlex 700S Phase II</b> Drive Inhibits Param. 156, Bits 1 & 16	Bit 16 = 1 Bit 1 = 1	Bit 16 = 0 Bit 1 = 1	Bit 16 = 1 Bit 1 = 0	Bit 16 = 0 Bit 1 = 0

## History of Changes

This appendix summarizes the revisions to this manual. Reference this appendix if you need information to determine what changes have been made across multiple revisions. This may be especially useful if you are deciding to upgrade your hardware or firmware based on information added with previous revisions of this manual.

### 20D-PM001B-EN-P, July 2011

Topic		
Value 11 "Sleep Mode" was added to parameter 150 [Logic State Mach] for firmware version 5.002.		
Bits 21 "Sleep Stop" and 22 "Sleep Config" were added to parameter 156 [Start Inhibits] for firmware version 5.002.		
Value 8 "Sleep Config" was added to parameter 159 [DigIn ConfigStat] for firmware version 5.002.		
Bits 24 "Drv Waking" and 27 "RideThruAlrm" added to parameter 328 [Alarm Status 3] for firmware version 5.002.		
Bit 2 "VltFdbkReCal" added to parameter 510 [FVC Mode Config] for firmware version 5.002.		
Bit 0 "PM Cogging" added to parameter 512 [PMag Mode Config] for firmware version 5.002.		
The following parameters were added for firmware version 5.002		
Parameter No. / Name	Parameter No. / Name	Parameter No. / Name
278 [Sleep-Wake Mode]	283 [Sleep Time]	595 [Nth Amplitude]
279 [Sleep-Wake Ref]	284 [Sleep Control]	596 [Nth Phase Shift]
280 [Wake Level]	534 [Nth CompOff Freq]	597 [Mth Torq Compen]
281 [Wake Time]	535 [Mth CompOff Freq]	598 [Mth Amplitude]
282 [Sleep Level]	594 [Nth Torq Compen]	599 [Mth Phase Shift]
A new alarm "Drv Waking" (89) was added to the Fault/Alarm Descriptions table.		
Added a description of the new Sleep-Wake mode function to Appendix B - Application Notes.		

### 20D-PM001A-EN-P, June 2010

Topic
Added new MPM-series permanent magnet motor specifications.

# Rockwell Automation Support

Rockwell Automation provides technical information on the Web to assist you in using its products.

At <http://www.rockwellautomation.com/support>, you can find technical manuals, technical and application notes, sample code and links to software service packs, and a MySupport feature that you can customize to make the best use of these tools. You can also visit our Knowledgebase at <http://www.rockwellautomation.com/knowledgebase> for FAQs, technical information, support chat and forums, software updates, and to sign up for product notification updates.

For an additional level of technical phone support for installation, configuration, and troubleshooting, we offer TechConnect<sup>SM</sup> support programs. For more information, contact your local distributor or Rockwell Automation representative, or visit <http://www.rockwellautomation.com/support/>.

## Installation Assistance

If you experience a problem within the first 24 hours of installation, review the information that is contained in this manual. You can contact Customer Support for initial help in getting your product up and running.

United States or Canada	1.440.646.3434
Outside United States or Canada	Use the <a href="#">Worldwide Locator</a> at <a href="http://www.rockwellautomation.com/rockwellautomation/support/overview.page">http://www.rockwellautomation.com/rockwellautomation/support/overview.page</a> , or contact your local Rockwell Automation representative.

## New Product Satisfaction Return

Rockwell Automation tests all of its products to help ensure that they are fully operational when shipped from the manufacturing facility. However, if your product is not functioning and needs to be returned, follow these procedures.

United States	Contact your distributor. You must provide a Customer Support case number (call the phone number above to obtain one) to your distributor to complete the return process.
Outside United States	Please contact your local Rockwell Automation representative for the return procedure.

## Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication [RA-DU002](#), available at <http://www.rockwellautomation.com/literature/>.
